New Developments In Lie Theory And Their Applications:

New Developments in Lie Theory and Its Applications Carina Boyallian, Esther Galina, Linda Saal, 2011 Focuses on representation theory harmonic analysis in Lie groups and mathematical physics related to Lie theory The papers give a broad overview of these subjects and also of the recent developments in research

New Developments in Lie Theory and Their Applications Juan Tirao, Wallach, 2012-12-06 Representation theory and more generally Lie theory has played a very important role in many of the recent developments of mathematics and in the interaction of mathematics with physics In August September 1989 a workshop Third Workshop on Representation Theory of Lie Groups and its Applications was held in the environs of Córdoba Argentina to present expositions of important recent developments in the field that would be accessible to graduate students and researchers in related fields This volume contains articles that are edited versions of the lectures and short courses given at the workshop Within representation theory one of the main open problems is to determine the unitary dual of a real reductive group Although this problem is as yet unsolved the recent work of Barbasch Vogan Arthur as well as others has shed new light on the structure of the problem The article of D Vogan presents an exposition of some aspects of this problem emphasizing an extension of the orbit method of Kostant Kirillov Several examples are given that explain why the orbit method should be extended and how this extension should be implemented

Recent Advances in Group Theory and Their Application to Spectroscopy John C. Donini, 2012-12-06 The last few years have seen a resurgence in the applications of group theory to the problems posed by various characteristics of transition metals and lanthanides In particular with the commercial availability of more sophisticated experimental techniques such as Magnetic Circular Dichroism MCD Electron Paramagnetic Resonance EPR or ESR and Single Crystal Polarised Spectra experimental data of a much more sophisticated and selective nature than the old standby absorption spectra and magnetic susceptibility has become available This new wealth of high quality experimental data thus presents challenges of interpretation and organization of the data which the new developments in group theory strive to meet The wealth and quality of this new data makes the nuances and differences implicit in the traditional strong and weak field approach testable Thus these approaches can be tested more fully and new formalisms can be meaningfully tested by comparison to experiment Hence the characteristic implicit in the strong and weak field approaches are revealed by studies into their formal structures as exemplified by Drs E König S Kremer and S Piepho Similarly works proceed apace on the knotty problem of correlation and generalization of these properties through approaches such as those of Drs P H Butler J C Donini and M Kibler On a similar vein the deep structure of group representation and correlations of representation of various groups is explored by the aforementioned and by Drs Fritzer Patera and Sharp

Recent Advances in Diffeologies and Their Applications Jean-Pierre Magnot, 2024-02-02 This volume contains the proceedings of the AMS EMS SMF Special Session on Recent Advances in

Diffeologies and Their Applications held from July 18-20, 2022 at the Universit  de Grenoble Alpes Grenoble France. The articles present some developments of the theory of diffeologies applied in a broad range of topics ranging from algebraic topology and higher homotopy theory to integrable systems and optimization in PDE. The geometric framework proposed by diffeologies is known to be one of the most general approaches to problems arising in several areas of mathematics. It can adapt to many contexts without major technical difficulties and produce examples inaccessible by other means, in particular when studying singularities or geometry in infinite dimension. Thanks to this adaptability, diffeologies appear to have become an interesting and useful language for a growing number of mathematicians working in many different fields. Some articles in the volume also illustrate some recent developments of the theory which makes it even more deep and useful.

Geometry and Representation Theory of Real and p -adic groups Juan Tirao, David Vogan, Joe Wolf, 2012-12-06. The representation theory of Lie groups plays a central role in both classical and recent developments in many parts of mathematics and physics. In August 1995 the Fifth Workshop on Representation Theory of Lie Groups and its Applications took place at the Universidad Nacional de C rdoba in Argentina. Organized by Joseph Wolf, Nolan Wallach, Roberto Miatello, Juan Tirao and Jorge Vargas, the workshop offered expository courses on current research and individual lectures on more specialized topics. The present volume reflects the dual character of the workshop. Many of the articles will be accessible to graduate students and others entering the field. Here is a rough outline of the mathematical content. The editors beg the indulgence of the readers for any lapses in this preface in the high standards of historical and mathematical accuracy that were imposed on the authors of the articles.

Connections between flag varieties and representation theory for real reductive groups have been studied for almost fifty years, from the work of Gelfand and Naimark on principal series representations to that of Beilinson and Bernstein on localization. The article of Wolf provides a detailed introduction to the analytic side of these developments. He describes the construction of standard tempered representations in terms of square integrable partially harmonic forms on certain real group orbits on a flag variety and outlines the ingredients in the Plancherel formula. Finally, he describes recent work on the complex geometry of real group orbits on partial flag varieties.

The Complex WKB Method for Nonlinear Equations I Victor P. Maslov, 1994-08-01. This book deals with asymptotic solutions of linear and nonlinear equations which decay as $h \rightarrow 0$ outside a neighborhood of certain points, curves and surfaces. Such solutions are almost everywhere well approximated by the functions $c(x) \exp(iS(x)/h)$ where $S(x)$ is complex and $\text{Im} S(x) < 0$. When the phase $S(x)$ is real, $\text{Im} S(x) = 0$, the method for obtaining asymptotics of this type is known in quantum mechanics as the WKB method. We preserve this terminology in the case $\text{Im} S(x) < 0$ and develop the method for a wide class of problems in mathematical physics. Asymptotics of this type were constructed recently for many linear problems of mathematical physics; certain specific formulas were obtained by different methods. V. M. Babich 5-7, V. P. Lazutkin 76, A. A. Sokolov 1, M. Ter-nov 113, J. Schwinger 107-108, E. J. Heller 53, G. A. Hagedorn 50-51, V. N. Bayer, V. M. Katkov 21, N. A. Chernikov 35 and others. However, a general Hamiltonian formalism for obtaining

asymptotics of this type is clearly required this state of affairs is expressed both in recent mathematical and physical literature For example the editors of the collected volume 106 write in its preface One can hope that in the near future a computational procedure for fields with complex phase similar to the usual one for fields with real phase will be developed

Module Theory Alberto Facchini, 1998-06-16 This expository monograph was written for three reasons Firstly we wanted to present the solution to a problem posed by Wolfgang Krull in 1932 Krull 32 He asked whether what we now call the Krull Schmidt Theorem holds for artinian modules The problem remained open for 63 years its solution a negative answer to Krull's question was published only in 1995 see Facchini Herbera Levy and Vámos Secondly we wanted to present the answer to a question posed by Warfield in 1975 Warfield 75 He proved that every finitely presented module over a serial ring is a direct sum of uniserial modules and asked if such a decomposition was unique In other words Warfield asked whether the Krull Schmidt Theorem holds for serial modules The solution to this problem a negative answer again appeared in Facchini 96 Thirdly the solution to Warfield's problem shows interesting behavior a rare phenomenon in the history of Krull Schmidt type theorems Essentially the Krull Schmidt Theorem holds for some classes of modules and not for others When it does hold any two indecomposable decompositions are uniquely determined up to a permutation and when it does not hold for a class of modules this is proved via an example For serial modules the Krull Schmidt Theorem does not hold but any two indecomposable decompositions are uniquely determined up to two permutations We wanted to present such a phenomenon to a wider mathematical audience

Recent Advances in Harmonic Analysis and Partial Differential Equations Andrea R. Nahmod, 2012 This volume is based on the AMS Special Session on Harmonic Analysis and Partial Differential Equations and the AMS Special Session on Nonlinear Analysis of Partial Differential Equations both held March 12-13 2011 at Georgia Southern University Statesboro Georgia as well as the JAMI Conference on Analysis of PDEs held March 21-25 2011 at Johns Hopkins University Baltimore Maryland These conferences all concentrated on problems of current interest in harmonic analysis and PDE with emphasis on the interaction between them This volume consists of invited expositions as well as research papers that address prospects of the recent significant development in the field of analysis and PDE The central topics mainly focused on using Fourier spectral and geometrical methods to treat wellposedness scattering and stability problems in PDE including dispersive type evolution equations higher order systems and Sobolev spaces theory that arise in aspects of mathematical physics The study of all these problems involves state of the art techniques and approaches that have been used and developed in the last decade The interrelationship between the theory and the tools reflects the richness and deep connections between various subjects in both classical and modern analysis

Pressley, 1995-07-27 Since they first arose in the 1970s and early 1980s quantum groups have proved to be of great interest to mathematicians and theoretical physicists The theory of quantum groups is now well established as a fascinating chapter of representation theory and has thrown new light on

many different topics notably low dimensional topology and conformal field theory The goal of this book is to give a comprehensive view of quantum groups and their applications The authors build on a self contained account of the foundations of the subject and go on to treat the more advanced aspects concisely and with detailed references to the literature Thus this book can serve both as an introduction for the newcomer and as a guide for the more experienced reader All who have an interest in the subject will welcome this unique treatment of quantum groups

Functional Analysis on the Eve of the 21st Century Simon Gindikin, James Lepowsky, Robert Wilson, 2012-12-06 A four day conference Functional Analysis on the Eve of the Twenty First Century was held at Rutgers University New Brunswick New Jersey from October 24 to 27 1993 in honor of the eightieth birthday of Professor Israel Moiseyevich Gelfand He was born in Krasnye Okna near Odessa on September 2 1913 Israel Gelfand has played a crucial role in the development of functional analysis during the last half century His work and his philosophy have in fact helped to shape our understanding of the term functional analysis itself as has the celebrated journal Functional Analysis and Its Applications which he edited for many years Functional analysis appeared at the beginning of the century in the classic papers of Hilbert on integral operators Its crucial aspect was the geometric interpretation of families of functions as infinite dimensional spaces and of operators particularly differential and integral operators as infinite dimensional analogues of matrices directly leading to the geometrization of spectral theory This view of functional analysis as infinite dimensional geometry organically included many facets of nineteenth century classical analysis such as power series Fourier series and integrals and other integral transforms

Crystal Bases: Representations And Combinatorics Daniel Bump, Anne

Schilling, 2017-01-17 This unique book provides the first introduction to crystal base theory from the combinatorial point of view Crystal base theory was developed by Kashiwara and Lusztig from the perspective of quantum groups Its power comes from the fact that it addresses many questions in representation theory and mathematical physics by combinatorial means This book approaches the subject directly from combinatorics building crystals through local axioms based on ideas by Stembridge and virtual crystals It also emphasizes parallels between the representation theory of the symmetric and general linear groups and phenomena in combinatorics The combinatorial approach is linked to representation theory through the analysis of Demazure crystals The relationship of crystals to tropical geometry is also explained **Trends in**

Halberstam Festschrift 2 Bruce C. Berndt, Harold Diamond, Adolf J Hildebrand, 1996-05-01 The second of two volumes presenting papers from an international conference on analytic number theory The two volumes contain 50 papers with an emphasis on topics such as sieves related combinatorial aspects multiplicative number theory additive number theory and Riemann zeta function **Geometry of Subanalytic and Semialgebraic Sets** Masahiro Shiota, 2012-12-06 Real analytic sets in Euclidean space Le sets defined locally at each point of Euclidean space by the vanishing of an analytic function were first investigated in the 1950 s by H Cartan Car H Whitney WI 3 F Bruhat W B and others Their approach was to derive information about real analytic sets from properties of their complexifications After some basic geometrical and topological facts were established however the study of real analytic sets stagnated This contrasted the rapid development of complex analytic geometry which followed the groundbreaking work of the early 1950 s Certain pathologies in the real case

contributed to this failure to progress For example the closure of or the connected components of a constructible set L a locally finite union of differences of real analytic sets need not be constructible e.g. \mathbb{R}^3 and $\{x^2y, yz\} \in \mathbb{R}^3$ and $\{x^2y^2, x^2y^2\} \in \mathbb{R}^3$ respectively Responding to this in the 1960s R Thorn Thl S Łojasiewicz LI 2 and others undertook the study of a larger class of sets the semianalytic sets which are the sets defined locally at each point of Euclidean space by a finite number of analytic function equalities and inequalities They established that semianalytic sets admit Whitney stratifications and triangulations and using these tools they clarified the local topological structure of these sets For example they showed that the closure and the connected components of a semianalytic set are semianalytic

Representations of Finite Dimensional Algebras and Related Topics in Lie Theory and Geometry Vlastimil Dlab, Claus Michael Ringel, 2004 These proceedings are from the Tenth International Conference on Representations of Algebras and Related Topics ICRA X held at The Fields Institute In addition to the traditional instructional workshop preceding the conference there were also workshops on Commutative Algebra Algebraic Geometry and Representation Theory Finite Dimensional Algebras Algebraic Groups and Lie Theory and Quantum Groups and Hall Algebras These workshops reflect the latest developments and the increasing interest in areas that are closely related to the representation theory of finite dimensional associative algebras Although these workshops were organized separately their topics are strongly interrelated The workshop on Commutative Algebra Algebraic Geometry and Representation Theory surveyed various recently established connections such as those pertaining to the classification of vector bundles or Cohen Macaulay modules over Noetherian rings coherent sheaves on curves or ideals in Weyl algebras In addition methods from algebraic geometry or commutative algebra relating to quiver representations and varieties of modules were presented The workshop on Finite Dimensional Algebras Algebraic Groups and Lie Theory surveyed developments in finite dimensional algebras and infinite dimensional Lie theory especially as the two areas interact and may have future interactions The workshop on Quantum Groups and Hall Algebras dealt with the different approaches of using the representation theory of quivers and species in order to construct quantum groups working either over finite fields or over the complex numbers In particular these proceedings contain a quite detailed outline of the use of perverse sheaves in order to obtain canonical bases The book is recommended for graduate students and researchers in algebra and geometry
