**New Directions in Ophthalmic Research** Marvin L. Sears, 1981-01-01      **National Library of Medicine Current Catalog** National Library of Medicine (U.S.),      Current Catalog National Library of Medicine (U.S.), 1993 First multi year cumulation covers six years 1965-70      **Pathological Neurochemistry** Abel Lajtha, 2013-03-14 More than for any other volume of the Handbook of Neurochemistry the chapters in this volume on Pathological Neurochemistry deal with the interface of the laboratory bench with the patient's bedside Most of the chapters reflect the confluence of basic scientists clinical investigators and physicians Considered here are many of the more important disorders that afflict the nerves muscles spinal cord and or brain of mankind throughout the world There are well over 500 such disorders And our understanding of their nature and of measures for effective prevention or treatment depends significantly on application of the biochemical disciplines that characterize neurochemistry Before World War II any attempt to compile a volume on pathological neurochemistry would have been largely descriptive and very rudimentary as such handbooks by Hans Winterstein 1929 Irvine Page 1937 and others demonstrate But thanks to the many major advances in research and technology in the postwar decades we now stand at the threshold of understanding how to manage many of the major neurological disorders and we may expect more such delineations in the immediate decades ahead Neurochemistry defined broadly has played a central role in this extraordinary turn of events progressing from what J L W Thudichum in 1884 called objects of anxious empiricism to his anticipation of the proud exercise of chemical precision      **Vision Research: pt. 1. *Pharmacology of the Eye* M.L. Sears, 2012-12-06 Roots of the theory and practice of ocular pharmacology may be traced to the ancient Mesopotamian code of Hammurabi and then to several papyri reflecting the clinical interests of the Egyptians The evolution of its art and science was irregularly paced until the nineteenth century when Kohler in 1884 proved the anesthetic effect of cocaine on the cornea and when Fraser Laquer Schmiedeberg Meyer and others studied the pharmacology of the autonomic nervous system by way of observations of the pupil Advances in the past few decades have been nothing short of explosive How can the student physician or basic research scientist stay in touch with these electrifying studies To help with the answer to this question the authors set as their goal the development of increased understanding so that the student research scientist and ophthalmologist can cope with the latest discoveries The authors want to narrow what appears to be an ever increasing gap between basic science and ophthalmology The basic aspects of pharmacology have been presented in light of the natural physiology In this regard while distinctions among endogenous mechanisms drug effects and the pathogenesis of disease are to be separately recognized appreciation must be given to the concept that both the desirable and unwanted manifestations or functions caused by either disease or drugs must very often represent a quantitative change in normal metabolic pathways

*Spectroscopy of Biological Molecules: New Directions* Jan Greve, Gerwin Jan Puppels, Cees Otto, 2012-12-06 Investigation of the structure and function of biological molecules through spectroscopic methods is a field rich in revealing clever techniques and demanding experiments It is most

gratifying to see that the basic concepts are applied to more and more complex systems making feasible the study of the behaviour of whole systems in relation to molecular disturbances The analytical potential of spectroscopy and spectroscopic imaging enables species identification of bacteria and tissue recognition Clear opportunities for in vivo applications become apparent in the medical field The methods developed in biophysics start to generate spin off in the direction of biotechnology where in previous years we have seen this happen for biochemical techniques New directions are manifest Tools are being developed to investigate the behaviour of single molecules in interaction with their environment Individual interactions can now be investigated and individual molecules in complexes can be visualized Processes that were previously unobservable as a result of ensemble averaging can now be investigated on a single molecule level Completely new information with regard to molecular behaviour is obtained in this way The insights amaze us and the prospect that this development will continue is exciting The 8th European Conference on the Spectroscopy of Biological Molecules is proud to have contributed to the dissemination of these new directions This proceedings book is an appropriate reflection of the progress obtained so far in the spectroscopy of biological molecules

*Retinal Degeneration* Robert E. Anderson, Joe G. Hollyfield, Matthew M. LaVail, 2012-12-06 During the last few years an explosion of information has come from human genetics and molecular and cell biological studies as to the genetic basis for a number of forms of inherited retinal degenerations These disorders have plagued mankind for millennia because they take from otherwise healthy individuals the precious gift of sight The fundamental advances in recent years have identified a number of genes involved in the groups of diseases which hopefully will lead to discoveries that may in the not too distant future allow the prevention and possible cure of some of these blinding eye disorders To foster a forum for discussions of studies on degenerative retinal disorders we convened a symposium on retinal degenerations in 1984 at the VIth International Congress of Eye Research Meeting held in Alicante Spain Because of the success of this meeting and the subsequent publication we have since organized a series of biennial satellite meetings on retinal degenerations for the ISER congresses held in Nagoya Japan 1986 San Francisco 1988 and Helsinki 1990 Each of these satellite symposium on retinal degenerations was accompanied by a published proceedings volume This volume is the fifth in this series and contains the proceedings of the Sardinia Symposium on Retinal Degeneration held September 15 20 1992 as a satellite meeting of the 10th International Congress of Eye Research

**Scientific Directory and Annual Bibliography** National Institutes of Health (U.S.), 1982 *Biochemistry of the Eye* Elaine R. Berman, 2013-11-22 My first introduction to the eye came more than three decades ago when my close friend and mentor the late Professor Isaac C Michaelson convinced me that studying the biochemistry of ocular tissues would be a rewarding pursuit I hastened to explain that I knew nothing about the subject since relatively few basic biochemical studies on ocular tissues had appeared in the world literature Professor Michaelson assured me however that two books on eye biochemistry had already been written One of them a beautiful monograph by Arlington Krause 1934 of Johns Hopkins Hospital is well worth reading even today for its

historical perspective The other published 22 years later was written by Antoinette Pirie and Ruth van Heyningen 1956 whose pioneering achievements in eye biochemistry at the Nuffield Laboratory of Ophthalmology in Oxford England are known throughout the eye research community and beyond To their credit are classical investigations on retinal corneal and lens biochemistry beginning in the 1940s and continuing for many decades thereafter Their important book written in 1956 on the Biochemistry of the Eye is a volume that stood out as a landmark in this field for many years In recent years however a spectacular amount of new information has been generated in ocular biochemistry Moreover there is increasing specialization among investigators in either a specific field of biochemistry or a particular ocular tissue

**Annual Report - National Eye Institute** National Eye Institute,1982 **Glaucoma Update II** G.K. Krieglstein,W. Leydhecker,2012-12-06 The second Committee Meeting of the Glaucoma Society of the International Congress of Ophthalmology was held in Carmel Valley California from October 22-27 1982 Traditionally this meeting was closed and preceded the International Congress of Ophthalmology in San Francisco A group of roughly 80 experts on glaucoma active members of the committee and invited guests exchanged latest scientific experiences on the progress in pathophysiology diagnosis and treatment of the glaucomas The aim of the meeting was to provide quite informal presentations grouped around main topics and ample lively discussions The scientific and local organization was in the hands of Jack Hetherington Jr San Francisco and Stephen M Drance Vancouver It is the sincere wish of the society to express warmest thanks to Valerie Hetherington who took in a most charming and efficient way much of the burden of the local organization The idea of pre-circulation of all scientific presentations 2-3 months before the meeting to all participants and guests proved to be effective with respect to fruitful and stimulating discussions at the site of the meeting We thank all participants for their co-operation in sending their manuscripts in time The society is indebted to Chibret Int Pharmaceutical Company for generous support of this publication

**Heredity and Visual Development** Joel B. Sheffield,S. Robert Hilfer,2012-12-06 The eye has fascinated scientists from the earliest days of biological investigation The diversity of its parts and the precision of their interaction make it a favorite model system for a variety of developmental studies The eye is a particularly valuable experimental system not only because its tissues provide examples of fundamental processes but also because it is a prominent and easily accessible structure at very early embryonic ages In order to provide an open forum for investigators working on all aspects of ocular development a series of symposia on ocular and visual development was initiated in 1973 A major objective of the symposia has been to foster communication between the basic research worker and the clinician It is our feeling that much can be learned on both sides from community interaction The idea for an informal meeting allowing maximum exchange of ideas originated with Dr Leon Candeub who supplied the necessary driving force that made the series a reality Each symposium has on a different aspect of ocular development Speakers have concentrated been selected to approach related topics from different perspectives

**List of Journals Indexed in Index Medicus** National Library of Medicine (U.S.),1996 Issues for 1977

1979 include also Special List journals being indexed in cooperation with other institutions Citations from these journals appear in other MEDLARS bibliographies and in MEDLING but not in Index medicus      **The Eye's Aqueous Humor: From Secretion to Glaucoma** ,1997-02-09 This volume presents a basic consensus of how the aqueous humor is formed and exits through the trabecular meshwork and canal of Schlemm It presents a timely update to current knowledge of the molecular transport mechanisms which underlie aqueous humor dynamics In addition it provides a concise description of the clinical approaches used for assessing these basic transport processes The book emphasizes the phenomenon of the diurnal rhythm of aqueous humor formation from both the clinical and molecular points of view This phenomenon provides the major indication that aqueous humor secretion is regulated Introduces the mechanisms of aqueous humor formation and outflow Describes the clinical study of aqueous humor dynamics Exposes the research approaches currently applied Emphasizes the diurnal rhythm of aqueous humor secretion Provides awareness of unanswered questions      *National Union Catalog* ,1983 Includes entries for maps and atlases
