Individuals as Producers of Their Development Richard M Lerner,Nancy A. Busch-Rossnagel,2013-09-03 Individuals as Producers of Their Development A Life Span Perspective provides an assessment of the usefulness of viewing the individual as an active contributor to his or her development It extends the breadth of organism environment reciprocities beyond those involved with the child and family On the one hand this extension involves a consideration of the role of evolutionary biological processes on the other it pertains to the broader ecology of human development the social network lying outside the family and the physical environmental contexts of development Person context reciprocities linked to variables that may play their greatest role in the extrafamilial context are also considered Variables such as physical attractiveness race and physical handicap are examples of those discussed in this regard Finally because of the greater scope of the analysis a potentially greater data base is examined in a search for documentation of the presence and role of dynamic person context interactions

The Evolution of Childhood Melvin Konner,2011-11-30 This book is an intellectual tour de force a comprehensive Darwinian interpretation of human development Looking at the entire range of human evolutionary history Melvin Konner tells the compelling and complex story of how cross cultural and universal characteristics of our growth from infancy to adolescence became rooted in genetically inherited characteristics of the human brain All study of our evolution starts with one simple truth human beings take an extraordinarily long time to grow up What does this extended period of dependency have to do with human brain growth and social interactions And why is play a sign of cognitive complexity and a spur for cultural evolution As Konner explores these questions and topics ranging from bipedal walking to incest taboos he firmly lays the foundations of psychology in biology As his book eloquently explains human learning and the greatest human intellectual accomplishments are rooted in our inherited capacity for attachments to each

other In our love of those we learn from we find our way as individuals and as a species Never before has this intersection of the biology and psychology of childhood been so brilliantly described Nothing in biology makes sense except in the light of evolution wrote Dobzhansky In this remarkable book Melvin Konner shows that nothing in childhood makes sense except in the light of evolution [List of Journals Indexed for MEDLINE](#) ,2005 [Routledge Handbook of Communication Disorders](#) Ruth H.
