Institutional Investors E. Philip Davis, Benn Steil, 2004-01-30 One of the most important recent developments in financial markets is the institutionalization of saving associated with the growth of pension funds, life insurance companies and mutual funds. An increasing proportion of household saving is now managed by professional portfolio managers instead of being directly invested in the securities markets or held in the form of bank deposits. With the aging of the population and its adverse impact on public pension systems, the shift of individual savings to institutional investors is likely to become even more marked in the coming years. This book provides a comprehensive economic assessment of institutional investment. It charts the development and performance of the asset management industry and analyzes the implications of rising institutionalized saving for the development of the securities trading industry, the financial sector as a whole and the wider economy. The book draws extensively on international experience, particularly in the United States, Western Europe and Japan.

New Perspectives on Corporate Social Responsibility Linda O'Riordan, Piotr Zmuda, Stefan Heinemann, 2015-04-14

It acts as a guide to awaken managers to the advantages of adopting a CSR mindset when developing sustainable business strategies. The book consists of three parts: 1. A theoretical realm which establishes the key concepts and rationale for the adoption of a sustainable CSR approach. 2. A practical realm which addresses putting CSR and sustainability into business practice. 3. An educational realm which proposes how to incorporate the concepts into teaching and training.

Financial Intermediation in Europe Luke Drago Spajic, 2012-12-06 Two items were firmly on the European economic agenda in the 1990s financial market integration and the creation of a common or single currency The former was supposed to have been achieved in 1992 via the Single Market Act with some derogations and the latter came into being on January 1 1999 This study is concerned with a particular connection between the two themes namely the process of financial intermediation and especially the role of banking 1 1 Financial Monetary Integration in Europe Up until the mid 1980s European financial intermediation was as elsewhere on shore in the post war period broadly characterised by a relatively high degree of diverse regulatory control and with cross border restrictions e g in the form of exchange controls This resulted in the administration of interest rates and pegging of prime market yields as well as restrictions on intermediary specialisation Hence it was easy to understand why price competition was hardly ever seen Within this kind of environment banks and other financial intermediaries OFIs competed mainly on non price terms for example through the expansion of branch networks The Single Market Programme SMP launched in 1986 was in a complex way intended to level out and open up the domestic markets of the European Union EU to competition from entities in other Member States
