The new experimental tools and approaches of modern biology have allowed us to better understand many fundamental properties of the eukaryotic cells. These significant discoveries have drastically changed the diagnostic and therapeutic approaches of modern clinical practice. On April 18-22, 1988, an International Symposium on Cell Function and Disease was held in Monterrey, Nuevo Leon, Mexico, aimed at reviewing some of the most recent advances made in the following five areas: Genes and Human Diseases, Cellular and Molecular Pathology, Infectious Diseases, Brain Transplants, and the New Approaches and Techniques with Potential Application to Cell Function and Disease. This book is based on the contributed papers of the symposium. To underline the importance of the clinical approach to the study of cell function and disease, a section on this subject was added at the end of the book. The chapters in this volume include contributions by some of the leading scientists of the international scientific community and Mexico. During the course of this international conference, numerous discussions were held by the local and international representatives of the scientific community concerning the creation of an International Center of Molecular Medicine aimed at stimulating further interaction between molecular biologists, biochemists, biophysicists, and clinicians. Such ideas received the endorsement and support of the Director General of the United Nations Educational and Scientific Organization (UNESCO), Federico Mayor, the Governor of the State of Nuevo Leon, Jorge Trevino, and the Secretary of Health of Mexico, Guillermo Soberon. *New Frontiers in Contraceptive Research* Institute of Medicine, Board on Health Sciences Policy, Committee on New Frontiers in Contraceptive Research, 2004-04-12

More than a quarter of pregnancies worldwide are unintended. Between 1995 and 2000, nearly 700,000 women died, and many more experienced illness, injury, and disability as a result of unintended pregnancy. Children born from unplanned conception are at greater risk of low birth weight, of being abused, and of not receiving sufficient resources for healthy development. A wider range of contraceptive options is needed to address the changing needs of the populations of the world across the reproductive life cycle, but this unmet need has not been a major priority of the research community and pharmaceutical industry. *New Frontiers in Contraceptive Research: A Blueprint for Action*, a new report from the Institute of Medicine of the National Academies, identifies priority areas for research to develop new contraceptives. The report highlights new technologies and approaches to biomedical research, including genomics and proteomics, which hold particular promise for developing new products. It also identifies impediments to drug development that must be addressed. Research sponsors

both public and private will find topics of interest among the recommendations which are diverse but interconnected and important for improving the range of contraceptive products their efficacy and their acceptability
