Raymond, Michael Zolensky, 2024-12-17 *Comets III* brings a comprehensive update to the latest breakthroughs in comet science over the last twenty years and showcases how recent space missions and advancements in telescopic observations have revolutionized our understanding of these celestial bodies With the contributions of more than eighty authors spanning twenty five chapters *Comets III* investigates the early solar system origins of comets and the clues provided by the composition and distribution of their present population for their long term dynamical evolution and interrelations with other members of the solar system Organized thematically each section is designed to enable connections across disciplinary boundaries in both planetary science and planetary formation astrophysics This comprehensive volume explores recent advancements in space missions telescopic observations and robotic surveys providing new understandings of the origins and dynamics of comets Intended for both researchers and students *Comets III* offers insights into unresolved questions and sets the stage for future advancements

White's People's Webster M. White, 1899 **The Dynamics of Natural Satellites of the Planets** Nikolay Emelyanov, 2020-10-16 *The Dynamics of Natural Satellites of the Planets* is an accessible reference for understanding the celestial mechanics of planetary moons through the lens of both theory and observation Based on decades of research by the author the book utilizes state of the art observations of the natural satellites in the solar system to establish models measurements and calculations to better understand the theory of the satellite movement and dynamics It presents an extensive set of study methods and results on the motion of natural satellites of the planets and includes reviews and references to related publication for further explanation By relating observations to numerical theory the book serves as a quick and comprehensive reference for applying the theory of orbital dynamics to observational data on orbits and physical properties of the natural satellites in order to formulate state of the art explanations and models particularly for determining the parameters of satellite motion Combines astronomy and celestial

mechanics providing astrometric data from observations to inform methods and models for predicting natural satellite dynamics Includes both theory and observation in one place and presents new models based on observations Organized into small sections each providing specific measurements calculations or models making it a quick and comprehensive reference
