Intelligent Decision Making: An AI-Based Approach Gloria Phillips-Wren, Nikhil Ichalkaranje, 2008-02-27. Intelligent Decision Support Systems have the potential to transform human decision making by combining research in artificial intelligence, information technology, and systems engineering. The field of intelligent decision making is expanding rapidly due in part to advances in artificial intelligence and network-centric environments that can deliver the technology. Communication and coordination between dispersed systems can deliver just-in-time information, real-time processing, collaborative environments, and globally up-to-date information to a human decision maker. At the same time, artificial intelligence techniques have demonstrated that they have matured sufficiently to provide computational assistance to humans in practical applications. This book includes contributions from leading researchers in the field, beginning with the foundations of human decision making and the complexity of the human cognitive system. Researchers contrast human and artificial intelligence, survey computational intelligence, present pragmatic systems, and discuss future trends. This book will be an invaluable resource to anyone interested in the current state of knowledge and key research gaps in the rapidly developing field of intelligent decision support.

*How to Read a Film* James Monaco, 2009-05-08. Richard Gilman referred to *How to Read a Film* as simply the best single work of its kind. And Janet Maslin in *The New York Times Book Review* marveled at James Monaco's ability to collect an enormous amount of useful information and assemble it in an exhilaratingly simple and systematic way. Indeed, since its original publication in 1977, this hugely popular book has become the definitive source on film and media. Now James Monaco offers a special anniversary edition of his classic work, featuring a new preface and

several new sections including an Essential Library One Hundred Books About Film and Media You Should Read and One Hundred Films You Should See As in previous editions Monaco once again looks at film from many vantage points as both art and craft sensibility and science tradition and technology After examining film's close relation to other narrative media such as the novel painting photography television and even music the book discusses the elements necessary to understand how films convey meaning and more importantly how we can best discern all that a film is attempting to communicate In addition Monaco stresses the still evolving digital context of film throughout one of the new sections looks at the untrustworthy nature of digital images and sound and his chapter on multimedia brings media criticism into the twenty first century with a thorough discussion of topics like virtual reality cyberspace and the proximity of both to film With hundreds of illustrative black and white film stills and diagrams *How to Read a Film* is an indispensable addition to the library of everyone who loves the cinema and wants to understand it better

*Capitalist Alternatives* Paul Dragos Aligica, Vlad Tarko, 2014-11-20 The book's objective is to explore the challenge of thinking methodically in a theoretically and empirically informed way about alternative forms of capitalism What are the most effective ways to conceptualize the existing models of capitalism that have captured the public imagination and are currently floating around in the public debate How can one mobilize empirical analysis and theory in thinking about the realm of possibilities and about the future of economic order but avoid the twin perils of scientism and historicism This book is an attempt to respond to these and related challenges First it delves into the substantive aspect of the debate taking a closer look at a set of particular forms and models of capitalism that are currently discussed both in mass media and in academic circles as plausible or at least possible alternatives to the status quo Crony State Regulatory and Entrepreneurial Capitalisms By elaborating and clarifying those models it engages in a heuristic exercise that leads to a better understanding of the task of conceptualizing and assessing in a theoretically informed way the diversity of forms of capitalism Second the book takes a step further looking at the epistemic theoretical and methodological dimensions of the discussion What is involved more precisely in our classifying and theorizing of capitalist systems and their historical evolution What is the epistemic basis for building plausible conjectures about the future evolution of an economic system What are the logical and methodological parameters of our endeavors that deal with economic systems or with the problem of continuity and change in comparative economic systems Offering an original approach to the problem of alternative forms of capitalism this book will be of great interest to scholars working in the field of comparative political economy

**The Financial Crisis in Constitutional Perspective** Poul F Kjaer, Gunther Teubner, Alberto

Febbrajo, 2011-07-27 This volume presents the first thorough sociologically informed legal analysis of the financial crisis which unfolded in 2008 It combines a multitude of theoretically informed analyses of the causes dynamics and reactions to the crisis and contextualises these within the general structural transformations characterising contemporary society It furthermore explores the constitutional implications of the crisis and suggests concrete changes to the constitutional set up

of contemporary society Although the question of individual responsibility is of crucial importance the central idea animating the volume is that the crisis cannot be reduced to a mere failure of risk perception and management for which individual and collective actors within and outside of financial organisations are responsible The 2008 crisis should rather be understood as a symptom of far deeper structural transformations For example contemporary society is characterised by massive accelerations in the speed with which societal processes are reproduced as well as radical expansions in the level of globalisation These transformations have however been asymmetrical in nature insofar as the economic system has outpaced its legal and political counterparts The future capability of legal and political systems to influence economic reproduction processes is therefore conditioned by equally radical transformations of their respective operational forms and self understanding Potentially the 2008 crisis therefore has far reaching constitutional implications

For Your Information  
Philip Tetlow, 2024-08-12 In recent times physicists have come to appreciate information's central role in the universe's grand plan That and the fact that an explicit understanding of the informational relationships involved may well be key to unlocking many of the universe's deepest secrets That makes the birth of both Computer and Information Science not only essential to the explosion of modern technological success but also to our understanding of reality itself In recognizing that what unfolds is a story not only about Alan Turing and his pioneering colleagues but also great thinkers like Albert Einstein Michael Faraday Ludwig Wittgenstein and others It therefore pulls in much of modern history and touches on seminal events like the birth of the atomic bomb It also hints at the reasons behind the various social and political divides we see in the world today So in many ways the story of how we became more informed about information is also the story of the modern age What you will read of here is the role that information plays in that ongoing saga and many of the twists and turns that have brought us to where we are with information today In it you will learn that unbeknown to Turing and others their work would not only help overthrow the Nazis and thaw the chilling atmosphere of the Cold War to come but also echo down the ages to remain relevant in a conflict still raging today That sees the Computer and Information Scientists at loggerheads as they fight to find a right and justifiable place for meaning in information's definition About The Open Group Press The Open Group Press is an imprint of The Open Group for advancing knowledge of information technology by publishing works from individual authors within The Open Group membership that are relevant to advancing The Open Group mission of Boundaryless Information Flow™ The key focus of The Open Group Press is to publish high quality monographs as well as introductory technology books intended for the general public and act as a complement to The Open Group standards guides and white papers The views and opinions expressed in this book are those of the authors and do not necessarily reflect the consensus position of The Open Group members or staff

**Mathematics for Economics and Finance** Michael Harrison, Patrick Waldron, 2011-03-31 The aim of this book is to bring students of economics and finance who have only an introductory background in mathematics up to a quite advanced level in the subject thus preparing them for the core

mathematical demands of econometrics economic theory quantitative finance and mathematical economics which they are likely to encounter in their final year courses and beyond The level of the book will also be useful for those embarking on the first year of their graduate studies in Business Economics or Finance The book also serves as an introduction to quantitative economics and finance for mathematics students at undergraduate level and above In recent years mathematics graduates have been increasingly expected to have skills in practical subjects such as economics and finance just as economics graduates have been expected to have an increasingly strong grounding in mathematics The authors avoid the pitfalls of many texts that become too theoretical The use of mathematical methods in the real world is never lost sight of and quantitative analysis is brought to bear on a variety of topics including foreign exchange rates and other macro level issues
