Ovarian Cell Interactions Genes To Physi:

Ovarian Cell Interactions Aaron J.W. Hsueh, David W. Schomberg, 2012-12-06 Due to the introduction of molecular and cellular biology approaches our understanding of ovarian physiology has reached a new level during the last few years The present volume provides a new perspective on the ovary from molecular and cellular to whole organ levels from non mammalian and rodent to human levels and from paracrine neuroendocrine and endocrine levels as well These papers represent the proceedings of the Ninth Ovarian Workshop sponsored by Serono Symposia USA July 9 11 1992 in Chapel Hill North Carolina

Cell Death in Reproductive Physiology Jonathan L. Tilly, Jerome F. Strauss, Martin Tenniswood, 2012-12-06

The regulation of cell death in various reproductive tissues as in other major organ systems of the body has become a focal point of research activity in many laboratories over the past few years As such the need for a formal meeting to highlight recent work in this field as well as to integrate knowledge from other sources such as investigators working on cell death in cancer and immune function in the broad context of identifying conserved pathways that coordinate life and death decisions in diverse cell types became apparent Therefore the goals of the Scientific Committee of the International Symposium on Cell Death in Reproductive Physiology sponsored by Serono Symposia USA were already predetermined by this need Simply stated we sought to bring together for the first time a select cohort of reproductive biologists and cell death researchers many but not all chosen based on their pioneering efforts in elucidating the fundamental aspects of apoptosis in reproductive and nonreproductive tissues as a means to review the current status of the field foster new ideas and promote scientific collaborations In the ensuing chapters of this book summaries of work discussed at the meeting are presented to emphasize both the diversity and the similarities in the occurrence and regulation of apoptosis in tissues of the male and female reproductive systems

The Somatotrophic Axis and the Reproductive Process in Health and Disease Eli Y Adashi, Michael O. Thorner, 1995-06-23 For many years now our understanding of the somatotrophic and reproductive axes has evolved essentially independently both fields of study reaching a highly advanced although far from complete level of understanding Along the way however it became apparent that in some circumstances the reproductive and somatotrophic axes may be interdependent Inklings to this effect were at times feeble and at other times more convincing Among those inklings are the clinical recognition by pediatric endocrinologists of the apparent association between isolated GH deficiency and delayed puberty as well as of the apparent permissive puberty promoting property of GH Equally important is a body of experimental studies establishing the ovary of multiple species as a site of GH reception and action Arguing against an essential role for GH in the reproductive process is the observation that individuals who have GH resistance of the Laron variety are fertile and that isolated GH deficiency does not constitute an absolute barrier to the attainment of sexual maturation and fertility The intraovarian insulin like growth factor IGF hypothesis proposes that IGFs may serve as amplifiers of gonadotropin action Although the dependence of intraovarian IGFs on systemic GH action has never been unequivocally

demonstrated that leap of faith has often been made The intraovarian IGF hypothesis serves as the rationale for the adjunctive use of GH in the induction of ovulation

Immunobiology of Reproduction Joan S. Hunt, 2012-12-06 Over the last several decades many biologists have been intrigued with the immunological paradox of pregnancy where maternal and fetal tissues peaceably coexist despite their genetic differences With the development of new insights on the interactive components of the immune system as well as the generation of powerful new molecular and cellular tools singular progress has been made in understanding immunological events that culminate in successful pregnancy This volume contains the proceedings for the first US symposium on the Immunobiology of Reproduction held August 26-29 1993 in Boston Massachusetts Papers address hemopoietic cells in reproductive tissues growth factors cytokines in the female reproductive tract and placenta growth factor networks in pregnancy loss and cancer placental expression of major histocompatibility complex and associated genes experimental models of MHC gene expression and immunological aspects of human infertility

Function of Somatic Cells in the Testis Andrzej Bartke, 2012-12-06 The papers in this volume represent the proceedings of the XIIth North American Testis Workshop held in Tampa Florida April 1993 and put forth recent developments in the study of endocrine and gametogenic functions of the male gonad

Male Sterility and Motility Disorders Samir Hamamah, Roger Mieusset, Francois Olivennes, Rene Frydman, 2012-12-06 This conference dedicated to the etiology and treatment of motility disorders in spermatozoa and male sterility attracted some of the finest investigators in the field Standards were immensely high throughout and discussions were meaningful and detailed Analyses on disorders in sperm motility demand a broad based approach involving cytologists geneticists andrologists and embryologists because the topic has many clinical and scientific overtones Human spermatozoa are at the mercy of so many factors as they form and mature in the testis and epididymis Their survival and fundamental characteristics are essential for fertilization and the male genome imposes its influence on the embryo as it becomes active in male pronuclei very soon after sperm entry into the oocyte All of these fundamental aspects of sperm biology demanded a broad breadth of topics in the symposium The opening session quickly got down to fundamentals with contributions from J L Gatti J G Alvarez C Gagnon and H Breitbart They discussed the mechanism and regulation of motility the metabolic strategy of human spermatozoa the effects of exogenous factors such as antibodies infections and toxins and finally the role of intracellular calcium on sperm motility To these topics the postcoffee session on the first morning described the genetics of motility disorders and the etiology and management of necrozoospermia The excellent presentation provided the background detail of the symposium and opened the way for the discussion of various clinical aspects of the topic

Women in Avian Physiology: 2023 Sandra G. Velleman, Francesca Soglia, Servet Yalcin, 2024-03-14 At present less than 30% of researchers worldwide are women Long standing biases and gender stereotypes discourage girls and women from pursuing a career in science technology engineering and mathematics STEM research Science and gender equality are however essential to ensure sustainable

development Although underrepresented and often unacknowledged female researchers have been crucial to scientific advances In order to change traditional mindsets gender equality must be promoted stereotypes defeated and girls and women should be encouraged to pursue STEM careers

Oocyte Physiology and Development in Domestic Animals Rebecca Krisher, 2013-02-19 Oocyte Physiology and Development in Domestic Animals reviews the most recent advances in the research of physiological and biochemical mechanisms underlying oocyte growth and development providing readers with the fundamental understanding of these key processes and summarizing this important field of research The book covers multiple molecular and physiological mechanisms including initiation of oocyte growth during folliculogenesis and in vitro follicle culture to support oocyte competence that are critical to health and quality Physiological process ranging from gene expression to metabolism will be covered with an eye toward using these factors to uncover biomarkers that will further advance the field In addition the text looks at the effects of in vitro maturation environments on oocyte quality and developmental outcome

Li,Yi-Feng Li,Marco António Campinho,Juan Fuentes,2024-04-16 *Knobil and Neill's Physiology of Reproduction* Tony M. Plant,Anthony J. Zeleznik,2014-11-15 The Fourth Edition of *Knobil Neill* continues to serve as a reference aid for research to provide the historical context to current research and most importantly as an aid for graduate teaching on a broad range of topics in human and comparative reproduction In the decade since the publication of the last edition the study of reproductive physiology has undergone monumental changes Chief among these advances are in the areas of stem cell development signaling pathways the role of inflammation in the regulatory processes in the various tissues and the integration of new animal models which have led to a greater understanding of human disease The new edition synthesizes all of this new information at the molecular cellular and organismal levels of organization and present modern physiology a more understandable and comparative context The Fourth Edition has been extensively revised reflecting new fundamental advancements in this rapidly advancing field Provides a common language for researchers across the fields of physiology endocrinology and biology to discuss their understanding of reproduction Saves academic researchers time in quickly accessing the very latest details on reproductive physiology as opposed to searching through thousands of journal articles

Growth Hormone in Fertility and Infertility: Physiology, Pathology, Diagnosis and Treatment Jan Tesarik, Yves Menezo, John Lui Yovich, 2021-03-04 **Proceedings of the Indian National Science Academy** Indian National Science Academy, 2000 Index Medicus ,2001 Tissue Renin-Angiotensin Systems Amal K. Mukhopadhyay, Mohan K. Raizada, 2013-11-22

Recent progress in recombinant DNA technology and the availability of a number of nonpeptide subtype specific receptor antagonists and of specific antibodies to components of prorenin renin angiotensin system PRAS have led to rapid advances in the understanding of the multifaceted role of angiotensin II classically known as a peptide hormone of cardiovascular homeostasis. Accumulating evidence suggests responsible for the regulation of gests that in addition to its role in salt and water metabolism PRAS may control other physiological functions including neurosecretion, cellular proliferation, hypertrophy and or differentiation, angiogenesis and gonadal function. At the same time it is becoming evident that the specialized functions of endocrine glands are not only regulated by trophic hormones but also by locally produced paracrine autocrine factors. The concept is emerging that tissue PRAS is one such locally active regulatory system. With more and more reproductive and endocrine organs being added to the list of tissues that contain a local tissue PRAS, questions are being raised by the reproductive biologists and endocrinologists as to the role of such systems in the tissues of their interest. On the other hand the cardiovascular and renovascular physiologists are wondering about the relevance of PRAS in various peripheral tissues compared to those of the classical cardiovascular organs. It appeared therefore that the time was ripe for a meeting to consider a merger of interest in these two important but heretofore distinct areas of physiology.
