## **Seabird Energetics:**

Seabird Energetics G. Causey Whittow, 2012-12-06 Seabird Energetics is a composite volume with a coherent theme It makes a valuable contribution to our understanding of the costs of breeding the significance of which goes far beyond physiology as a brief historical perspective may illustrate After decades of mainly anecdotal observations by naturalists with an interest in seabirds there was still so little information that in 1954 David Lack in his book *The Natural Regulation of Animal Numbers* was forced to ignore seabirds in a way that would be unthinkable today The late fifties however produced a seminal contribution to seabird ecology and behaviour in the series of papers which stemmed from the Centenary Expedition of the British Ornithologists Union to Ascension Island Not only had quantitative ecology become the norm but the interest aroused by the European Ethological approach to bird behaviour had led to properly descriptive and analytical studies of seabird behaviour The complex interactions between social behaviour and ecology then received more attention and the sixties and seventies brought a flood of papers on ecology and on some social aspects of breeding ecology V C Wynne Edwards linked these two as part of his attempt to understand the mechanism of the regulation of animal populations in his book *Animal Dispersion in Relation to Social Behaviour* 1962 He paid considerable attention to seabirds and the phenomena of clutch and brood size deferred breeding rest years etc although unfortunately the most relevant studies were yet to come

**Seabird Energetics** G. Causey Whittow, 1984-10-01      Seabird Ecology R. W. Furness, 2012-12-06 In the last few years there has been an exciting upsurge in seabird research There are several reasons for this Man's increased exploitation of natural resources has led to a greater awareness of the potential conflicts with seabirds and of the use of seabirds to indicate the damage we might be doing to our environment Many seabird populations have increased dramatically in numbers and so seem more likely to conflict with man for example through competition for food or transmission of diseases Oil exploration and production has resulted in major studies of seabird distributions and ecology in relation to oil pollution The possibility that seabirds may provide information on fish stock biology is now being critically investigated Some seabird species have suffered serious declines in numbers and require conservation action to be taken to reduce the chances that they will become extinct This requires an understanding of the factors determining their population size and dynamics      **Avian Energetics and Nutritional Ecology** C. Carey, 2012-12-06 A symposium held in 1973 chaired and organized by William R Dawson was the first major attempt to summarize and synthesize the existing information in the then emerging field of avian energetics The symposium featured papers by James R King William A Calder III Vance A Tucker and Robert E Ricklefs and commentaries by George A Bartholomew S Charles Kendeigh and Eugene P Odum The proceedings of the symposium *Avian Energetics* Paynter 1974 played a critical role in stimulating interest and research in the field of avian energetics Some twenty odd years later we are making another attempt to summarize the information in the field of avian energetics Some obvious differences exist between its predecessor and this volume Numerous improvements in methodology such as the use

of doubly labeled water to estimate metabolism in free living birds now allow researchers to ask questions that could not be addressed previously Second consideration of nutrition is now inseparable from that of energetics This merger is necessary not only because food intake is the source of both energy and nutrients but also because one or more nutrients rather than energy can be limiting for a given species in a particular instance Finally the study of energetics and nutritional ecology particularly in birds and mammals has grown so dramatically that a single volume can now only partially cover the range of possible topics and can catalogue only a sampling of all the studies on the subject **Seabirds** J. P. Croxall,1987-05-14

Originally published in 1986 this book is concerned with the ways in which seabirds function as predators in the marine environment in particular about how they find and catch food and how much of it they consume It reviews both the feeding ecology of seabirds including adaptations for flight and diving and also most of the leading field studies in polar temperate and tropical regions that have quantitatively examined the interactions of seabird communities with their prey **Biology of Marine Birds** E. A. Schreiber,Joanna Burger,2001-08-16 **Biology of Marine Birds** provides the only complete summary of information about marine birds ever published It analyzes their breeding biology ecology taxonomy evolution fossil history physiology energetics and conservation The book covers four orders of marine birds in detail and includes two summary chapters that address the biology of shorebirds and wading birds and their lives in the marine environment Summary tables give detailed information on various aspects of their life histories breeding biology physiology and energetics and demography It provides a guide to ornithologists and students for research projects **Wildlife Review** ,1985 **Volume**

**1: Seabird Biodiversity and Human Activities** Jaime A. Ramos,Leonel Pereira,2022-06-30 Seabirds are global travellers connecting oceans and seas all over the world and facing multiple threats at local and global scales Seabirds are long lived top predators reflecting changes at lower trophic levels and are good models to assess ecological changes produced by human societies Thus world wide collaborations are needed to understand seabird ecology and to develop effective conservation measures benefitting both humans and seabird populations This book provides a modern overview on seabird biodiversity studies it begins by covering the most up to date techniques to study seabirds and then focus on pragmatic issues related with interactions between seabirds and humans the use of seabirds as ecological indicators and conservation of seabirds It gives an updated insight on all these topics and highlights gaps that need further development for a comprehensive understanding of the relationships between seabirds and human actions This book covers the response of the seabird research community to a biodiversity crisis aiming to contribute towards environmental sustainability It should provide inspiration to a wide range of professionals and students including the much needed world wide collaboration between research groups and practitioners In this way seabird research and conservation provide an inspiration for the solution of global issues such as climate change **Community Ecology and Flight Energetics in Tropical Seabirds of the Eastern Pacific** Lisa Taylor Ballance,1993 *Physiology of Cold Adaptation in Birds* Claus Bech,Randi Eidsmo

Matthias Starck, Robert E. Ricklefs, 1998 This is the first reappraisal in 50 years of concepts of development made in birds This book is a case study in evolutionary diversification of life histories Although birds have a rather uniform body plan and physiology they exhibit marked variation in development type parental care and rate of growth Altricial birds are fully dependent on their parents for warmth and nutrition and begin posthatching life in a more or less embryonic condition At the other extreme such superprecocial species as the megapodes are independent of all parental care from hatching and the neonate able to fly resembles an adult bird This book thus attempts to present an integrative perspective of organism biology ecology and evolution The Ecology of Bird Communities John A. Wiens, 1989 The two volumes of John Wiens Ecology of Bird Communities first published in 1992 are recognised as having applications and importance beyond the study of birds to the wider study of ecology in general The books contain a detailed synthesis of our understanding of the patterns of organisation

of bird communities and of the factors that may determine them drawing from studies from all over the world The author however does more than simply review findings in bird community ecology By emphasizing how proper logic and methods have or have not been followed and how different viewpoints have developed historically and have led to controversy he extends the scope of these books far beyond the study of birds Volume 1 Foundations and Patterns explores why avian community ecologists ask the questions they do and what philosophical and methodological approaches they have used to answer such questions Most of the book is devoted to a critical evaluation of what is known about the nature and organisation of bird communities
