Environmental Assessment Program ,1986 Marine Ecosystem Assessment for the Southern Ocean: Meeting the
Challenge for Conserving Earth Ecosystems in the Long Term**

Monica M. C. Muelbert,2024-12-24 National and international agencies need assessments of change in ecosystems and their drivers in order to sustain natural systems to maintain the delivery of services and to meet the challenge for conserving Earth ecosystems in the long term In marine systems change may arise directly from human activities e g fisheries indirectly from local or global activities cascading effects through food webs from fisheries or changing environments from climate change and or ocean acidification or from naturally varying processes A particular challenge for managers is to identify how dangerous future climate change will be for ecosystems and their services and whether mitigation or adaptation may be needed in advance in order to achieve the conservation requirements For regions of international attention particularly those that have the attention of many management or policy oriented bodies a standardized process is needed to harmonize the scientific information on the status and trends in ecosystems used by the different bodies That process also needs to ensure the information is available in a timely manner For example assessments of change in habitats species and or food webs in the Southern Ocean are currently compiled separately for at least ten different international organizations or processes A Marine Ecosystem Assessment for the Southern Ocean MEASO aims to harmonize that information for policy makers This assessment began with an international conference in April 2018 <http://www.measo2018.aq> where it was agreed to undertake the first MEASO over 2018 2019 with the view to provide the outcomes to relevant bodies such as the Scientific Committee for the Conservation of Antarctic Marine Living Resources soon after

The Albatross and the Fish Robin W. Doughty, Virginia Carmichael,2012-01-20 Breeding on remote ocean islands and spending much of its life foraging for food across vast stretches of seemingly empty seas the albatross remains a legend for most people And yet humans are threatening the albatross family to such an extent that it is currently the most threatened bird group in the world In this extensively researched highly readable book Robin W Doughty and Virginia Carmichael tell the story of a potentially catastrophic extinction that has been interrupted by an unlikely alliance of governments conservation groups and fishermen Doughty and Carmichael authoritatively establish that the albatross s fate is linked to the fate of two of the highest value table fish Bluefin Tuna and Patagonian Toothfish which are threatened by unregulated commercial harvesting The authors tell us that

commercial fishing techniques are annually killing tens of thousands of albatrosses And the authors explain how the breeding biology of albatrosses makes them unable to replenish their numbers at the rate they are being depleted Doughty and Carmichael set the albatross s fate in the larger context of threats facing the ocean commons ranging from industrial overfishing to our habit of dumping chemicals solid waste and plastic trash into the open seas They also highlight the efforts of dedicated individuals environmental groups fishery management bodies and governments who are working for seabird and fish conservation and demonstrate that these efforts can lead to sustainable solutions for the iconic seabirds and the entire ocean ecosystem
