Anastasio, Kristen Ann Ehrenberger, Patrick Watson, Wenyi Zhang, 2021-08-03 An argument that individuals and collectives form memories by analogous processes and a case study of collective retrograde amnesia We form individual memories by a process known as consolidation the conversion of immediate and fleeting bits of information into a stable and accessible representation of facts and events These memories provide a version of the past that helps us navigate the present and is critical to individual identity In this book Thomas Anastasio Kristen Ann Ehrenberger Patrick Watson and Wenyi Zhang propose that social groups form collective memories by analogous processes Using facts and insights from neuroscience psychology anthropology and history they describe a single process of consolidation with analogous not merely comparable manifestations on any level whether brain family or society They propose a three in one model of memory consolidation composed of a buffer a relator and a generalizer all within the consolidating entity that can explain memory consolidation phenomena on individual and collective levels When consolidation is disrupted by traumatic injury to a brain structure known as the hippocampus memories in the process of being consolidated are lost In individuals this is known as retrograde amnesia The authors hypothesize a social hippocampus and argue that disruption at the collective level can result in collective retrograde amnesia They offer the Chinese Cultural Revolution 1966 1976 as an example of trauma to the social hippocampus and present evidence for the loss of recent collective memory in mainland Chinese populations that experienced the Cultural Revolution

Alphabet Micky Lee, 2019-05-14 Google is synonymous with searching, but in this innovative new research volume Micky Lee explores how the Alphabet Corporation, now the parent company of Google, is more than just a search engine. Using a political economic approach, Lee draws on the concept of networks to investigate the growth of this key media player. The establishment of the parent company Alphabet shows the company is expanding to other industries, from equity investment to self-driving cars. This book first examines this history of expansion before delving into the economic, political, and cultural profiles of the corporation. Lee ultimately finds that what makes Google powerful is not one genius idea, but rather networks of people, places, and capital. Alphabet: The Becoming of Google is a compelling dive into the sometimes inscrutable world of Google, ideal for students, scholars, and researchers interested in the fields of digital media studies, the politics and economics of online media, and the history of the internet.

After the Software Wars Keith Curtis, 2009 Computers are an advancement whose importance is comparable to the invention of the wheel or movable type. While computers and the Internet have already changed many aspects of our lives, we still live in the dark ages of computing because proprietary software is still the dominant model. One might say that the richest alchemist who ever lived is my former boss, Bill Gates. Oracle founder Larry Ellison and Google co-founders Sergey Brin and Larry Page are close behind. Human knowledge increasingly exists in digital form, so building new and better models requires the software to be improved. People can only share ideas when they also share the software to display and modify them. It is the expanded use of free software that will allow a greater ability for people to work together and increase the pace of progress. This book will demonstrate that a system where anyone can edit, share, and review the body of work will lead not just to something that works, but eventually to the best that the world can achieve. With better cooperation among our scientists, robot-driven cars, is just one of the many inventions that will arrive: pervasive robotics, artificial intelligence, and much faster progress in biology, all of which rely heavily on software.

Artificial Intelligence and the Two Singularities Calum Chace, 2018-04-20 The science of AI was born a little over 60 years ago but for most of that time its achievements were modest In 2012 it experienced a big bang when a branch of statistics called Machine Learning and a sub branch called Deep Learning was applied to it Now machines have surpassed humans in image recognition and they are catching up with us at speech recognition and natural language processing Every day the media reports the launch of a new service a new product and a new demonstration powered by AI When will it end The surprising truth is the AI revolution has only just begun Artificial Intelligence and the Two Singularities argues that in the course of this century the exponential growth in the capability of AI is likely to bring about two singularities points at which conditions are so extreme that the normal rules break down The first is the economic singularity when machine skill reaches a level that renders many of us unemployable and requires an overhaul of our current economic and social systems The second is the technological singularity when machine intelligence reaches and then surpasses the cognitive abilities of an adult human relegating us to the second smartest species on the planet These singularities will present huge challenges but this book argues that we can meet these challenges and overcome them If we do the rewards could be almost unimaginable This book covers Recent developments in AI and its future potential The economic singularity and the technological singularity in depth The risks and opportunities presented by AI What actions we should take Artificial intelligence can turn out to be the best thing ever to happen to humanity making our future wonderful almost beyond imagination But only if we address head on the challenges that it will raise Calum Chace is a best selling author of fiction and non fiction books and articles focusing on the subject of artificial intelligence He is a regular speaker on artificial intelligence and related technologies and runs a blog on the subject at www.pandoras.brain.com Prior to becoming a full time writer and speaker he spent 30 years in business as a
