Longevity To The Limits And Beyond:

Longevity: To the Limits and Beyond Jean-Marie Robine, James W. Vaupel, Bernard Jeune, Michel Allard, 2012-12-06
Why longevity For a number of years the Fondation IPSEN has been devoting considerable effort to the various aspects of ageing not only to age related diseases such as Alzheimer's but also to the Centenarians the paragon of positive ageing The logical continuation of this approach is to address the question of longevity in global terms Behind the extreme values what span is accessible to all of us and likely to directly concern most of our contemporaries The individual and collective increase in the duration of life is one of the most striking phenomena of our time It could be one of the most significant events in the bio social history of humanity The increase in life expectancy at old age which started a few decades ago only is going on The most well advised observer had not foreseen or even dared hope for this increase which will drastically affect our everyday life our habits and our behavior In the fragment of human history we are living in it is our responsibility to deal with this major transformation for the species Such a transformation needs an effort from all to adapt to the new conditions This transformation has to be managed rather than simply experienced anticipated rather than followed in order to avoid any attempt to pervert this major step forward All that was present during the first symposium of the new series on longevity of the Colloques Medecine et Recherche convened by the Fondation IPSEN Nutraceuticals in Health and Disease Prevention Klaus Kramer, Peter-Paul Hoppe, Lester Packer, 2001-05-15 Promoting scientific support for the plethora of health benefits related to nutrition and medicine Nutraceuticals in Health and Disease Prevention delivers a comprehensive and scientifically sound overview of the latest research findings in disease prevention therapy and enhanced body function in the revolutionary field of nutraceutical technology *Pathways to the Development of the Aging Phenotype* John Papaconstantinou, Pathways to the Development of the Aging Phenotype explores the journey that all living things must eventually take Using the definition that aging is a multifactorial syndrome caused by multiple pathophysiological processes that occur simultaneously in multiple tissues of the aged Dr John Papaconstantinou provides a wholistic look at aging its causes how it presents and how aging syndromes can be treated In addition this book offers a deeper look at the effects of aging on individual organs The aging heart skeletal muscle eye skin kidney intestine liver pancreas and adipose tissue are all covered as well as an examination of the aging brain and neurodegenerative diseases such as Alzheimer's ALS Parkinson's and Huntington's disease Other important subjects covered are the effects of social isolation and loneliness on aging as well as the effects of sleep and other lifestyle choices Throughout the book Dr Papaconstantinou provides information on current and promising research on aging and the treatment of aging syndromes as well as the recent exciting work on tissue regeneration that suggests aged tissues and organs can be reprogrammed to a juvenile phenotype Pathways to the Development of the Aging Phenotype is an exciting addition to scientific and medical literature related to aging and will be an invaluable resource for medical students professionals and researchers looking to expand their knowledge in this field

Biofatalism Gillian Barker, 2015-10-13 Beyond Biofatalism is a lively and penetrating response to the idea that evolutionary psychology reveals human beings to be incapable of building a more inclusive cooperative and egalitarian society. Considering the pressures of climate change, unsustainable population growth, increasing income inequality, and religious extremism, this attitude promises to stifle the creative action we require before we even try to meet these threats. Beyond Biofatalism provides the perspective we need to understand that better societies are not only possible but actively enabled by human nature. Gillian Barker appreciates the methods and findings of evolutionary psychologists but she considers their work against a broader background to show human nature is surprisingly open to social change. Like other organisms, we possess an active plasticity that allows us to respond dramatically to certain kinds of environmental variation and we engage in niche construction, modifying our environment to affect others and ourselves. Barker uses related research in social psychology, developmental biology, ecology, and economics to reinforce this view of evolved human nature and philosophical exploration to reveal its broader implications. The result is an encouraging foundation on which to build better approaches to social, political, and other institutional changes that could enhance our well-being and chances for survival. **Daily Digest** United States.
