Kobayashi,2012-12-06 The regulation of the organism has traditionally been ascribed to two distinct systems the nervous and the endocrine Though coordination between the two systems has been acknowledged researchers and authors have tended to deal with them as comprising separate categories of cells involved in different activities With this approach a given regulatory mechanism would be evaluated as to whether it should be accounted for by nervous or endocrine functions The past 15 years however have witnessed numerous important discoveries and conceptual developments concerning the morphological physiological and bio chemical relations between the nervous and endocrine systems Advances in immunocytochemical studies have revealed that there are a wide variety of messenger substances that function in both regulatory systems As a result researchers have been stimulated to investigate neuronlike properties of endocrine cells and conversely endocrine or secretory features of neurons It has thus become obvious that the rigidities in the classic criteria of neurotransmitters and hormones may rather impede further advances in these research fields The activities of neurons are no longer evaluated simply in terms of EPSP IPSP and the release of classic trans mitters such as acetylcholine noradrenaline and GABA Hormonal actions are no longer analyzed solely with regard to concentrations of classic aminic and peptidic hormones in the systemic blood circulation The concept of the paraneuron which we proposed in 1975 has become one of the theoretical bases for the development of this trend of study      Endocrine Pathology of the Gut and Pancreas Yogeshwar

Dayal,2024-12-20 This important new book presents critical information on the clinical and morphological aspects of various endocrinological disorders of the gut and pancreas Topics include a historical perspective and broad overview of the neuroendocrine component of the gut hyperplastic proliferations of gastrointestinal endocrine cells pancreatic endocrine cells and their non neoplastic proliferations tumors and lesions and endocrine differentiation in nonendocrine tumors The book stresses clinical and pathological aspects of these topics as well as the pathogenesis clinicopathological correlations and diagnostic approaches Gastroenterologists pathologists internists surgeons endocrinologists and others interested in endocrinological disorders of the gut and pancreas will discover that this book will be a welcome addition to your reference library      National Library of Medicine Current Catalog National Library of Medicine (U.S.),      **Immunodiagnosis of**
