New Experimental Modalities In The Control Of Neoplasia:

New Experimental Modalities in the Control of Neoplasia Prakash Chandra, 2012-12-06 Acquisition of new knowledge about the biological and bio chemical nature of neoplastic cells has led to the design and development of several experimental approaches in the treatment the implication of monoclonal antibodies as a vehicle for the targeted drug delivery and selective destruction of tumor cells immunologic advances in the recognition of some specific events during metastatic growth the role of biological response modifiers in modifying or reversing malignant growth and biochemical advances such as the role of gene amplification in drug resistance and the approaches to the reversal of resistance in drug refractory cancer the role of membranes in designing useful strategies the identification of new enzymic targets in some types of cancer cells and the characterization of metabolically active forms of cytostatic compounds These are the important issues which were addressed in an international NATO Advanced Study Institute ASI attended by scientists from all over the world representing a wide spectrum of scientific disciplines Although the acquired immune deficiency syndrome AIDS is not a malignant disease but the etiological involvement of a retrovirus belonging to the family of human T cell lymphotropic viruses which cause leukemia and lymphomas in man justifies its inclusion in the agenda of this Study Institute Scientific presentations from Drs

King Jr., John I. Pitt, Larry R. Beuchat, Janet E.L. Corry, 2013-03-09 The desirability indeed the necessity for standardization of methods for the examination of foods for contaminant and spoilage mycoflora has been apparent for some time The concept of a specialist workshop to address this problem was borne during conversations at the

Gordon Research Conference on Microbiological Safety of Foods in Plymouth New Hampshire in July 1982 Discussions at that time resulted in an Organizing Committee of four who became the Editors and a unique format all attendees would be expected to contribute and in most cases more than once and papers in nearly all sessions would be presented as a set of data on a single topic not as a complete research paper Each session would be followed by general discussion and then a panel would formulate recommendations for approval by a final plenary session The idea for this format was derived from the famous Kananaskis I workshop on Hyphomycete taxonomy and terminology organized by Bryce Kendrick of the University of Waterloo Ontario in 1969 Attendance would necessarily be limited to a small group of specialists in food mycology The scope of the workshop developed from answers to questionnaires circulated to prospective participants To generate new data which would allow valid comparisons to be drawn intending participants were given a variety of topics as assignments and asked to bring information obtained to the workshop The Molecular Basis of B-Cell Differentiation and Function M.

Ferrarini,Benvenuto Pernis,2013-03-09 The progress in protein and nucleic acid chemistry together with improvements of the previously employed tissue culture techniques have led to the solution of problems such as that of the generation of antibody diversity or of the molecular structure of T and B cell membrane receptor for antigen which had challenged the past generations of immunologists Thanks to this progress an impressive amount of knowledge has been accumulated on certain cell types that were relatively mysterious until recently The B lymphocyte represents a typical example of such a cell With these considerations in mind we have started to organize a NATO summer school on The molecular basis of B cell differentiation and function that had the specific aim of bringing up to date a selected number of young investigators During the course held in Santa Margherita Ligure October 1-11 1985 it became apparent that rather than a formal school we had organized an informal series of Workshops where both the Faculty members and the participants were discussing their own data in addition to reviewing the general progress in the field The deep commitment of everyone to his research subject and the enthusiasm had caused this very successful change in the shape of the course At the end we asked the members of the Faculty and the participants to write a summary of their data and of their point of view on selected subjects Delivery Systems for Peptide Drugs S.S. Davis,Lisbeth Illum,E. Tomlinson,2013-11-11 Recent years have seen enormous advances in the field of protein and peptide engineering and a greater understanding in the way in which biological response modifiers function in the body It is now possible through the use of recombinant DNA techniques or by solid phase protein synthesis to produce significant quantities of a wide variety of regulatory agents that are therapeutically applicable The list of these response modifiers expands almost daily to include interferons macrophage activation factors neuropeptides and agents that may have potential in cardiovascular disease inflammation contraception etc Prospects to use some of these materials in medicine have reached the stage where products have either been approved by regulatory authorities or are the subject of applications as investigatory drugs or as new therapeutic agents In some uses the pertinent agent will be administered on an

acute basis in the form of a simple injection as for example the use of a tissue plasminogen activator for the treatment of coronary infarct In other cases regulatory proteins and peptides are indicated for chronic therapy and here they will need to be administered by an appropriate delivery system Unfortunately the research on delivery systems for peptides and proteins has not kept pace with the rapid progress in biotechnology and consequently there are presently few systems that are entirely appropriate for the administration of macromolecular drugs according to complex dosage regimens eg intermittent and pulsed therapy Furthermore essential pharmacokinetic and pharmacodynamic data may be missing

Immunodeficiency Disorders and Retroviruses Kalman Perk, 1988-01-01 Advances in Veterinary Science and Comparative Medicine Volume 32 Immunodeficiency Disorders and Retroviruses provides an understanding of retrovirus morphogenesis pathogenesis and the processes of infection and transformation This book discusses several issues in retrovirology and their importance in basic viral oncology comparative medicine veterinary medicine and immunodeficiency syndromes Organized into eight chapters this volume begins with an overview of the replication cycle of retroviruses This text then summarizes the factors responsible for the progression of the neoplastic condition through each stage in the ontogeny of lymphoid leukemia Other chapters consider bovine leukemia virus which is the etiological agent of a chronic lymphatic leukemia lymphoma in sheep cos and goats This book discusses as well the immunologic virologic and epidemiologic aspects of immunosuppressive disease caused by type D retroviruses The final chapter deals with the involvement of DNA and RNA oncogenic viruses in animal and human neoplasias This book is a valuable resource for scientists oncologists and clinicians

Hereditary Malignant Melanoma Ramon M. Fusaro, Henry T. Resistance to Antitumor Agents M. Ghione, Luciano Rausa, 1989 Based on lectures given at the Ettore Majorana Centre s 25th Course on Resistance to Antitumor Agents in the Laboratory and Clinic Problems and Implications April 1988 A number of compounds have properties that inhibit the proliferation of neoplastic cells and these compounds make up a large array of therapeutic agents now available to the physician treating cancer patients Experimental evidence and controlled clinical trials have shown that the failure to reach the expected goal during treatment

is principally due to the emergence of drug resistant cancer cell clones The therapist s task is to design schedules using single or combined treatments in order to prevent or circumvent the obstacle of drug resistance This book aims to update clinical oncologists dealing with this problem Book club price 51 Annotation copyrighted by Book News Inc Portland OR

Cyst Nematodes F. Lamberti,C.E. Taylor,2012-12-06 The cyst nematodes are a major group of plant pathogens of economic importance in many countries throughout the world Considerable yield losses have been attributed to cyst nematodes attacking potatoes sugar beet soybean and cereals Because of the protective cyst that is formed which encloses the eggs they pose special problems in their control and also in preventing their distribution in soil from infested areas There has been much research on many aspects of the biology of cyst nematodes and the large number of publications are testimony to their importance as crop pests and of the interest of nematologists in the group Nevertheless they continue to pose problems because of the complexity of their phylogeny and taxonomy and there is still much to be investigated on their biology particularly with those aspects which relate to improving the effectiveness of control In many respects the biology of the various cyst nematode species is similar although with variations due to different interactions with hosts and geographical location Thus research on any one species has general applicability and this is particularly so with regard to evaluation of control measures or to the methodology of soil sampling for the assessment of populations prior to growing crops

Radiation Carcinogenesis and DNA Alterations Frederic J. Burns,2013-03-13 This volume is based on the proceedings of an Advanced Study Institute ASI sponsored by the North Atlantic Treaty Organization NATO held October 1984 in Corfu Greece The meeting received financial support from the United States Department of Energy and the United States National Cancer Institute A plethora of recent developments in the molecular biology of DNA are leading to new ideas concerning how DNA alterations might be involved in the mechanism of radiation carcinogenesis Evidence is accumulating that genetic sequences known as oncogenes are involved in the translation of DNA molecular alterations into phenotypic changes associated with malignant cells For example a chromosome break often occurs at or near the location of a specific oncogene in Burkitt s lymphoma Such breaks could represent initial lesions in a translocation process that activates the oncogene by inserting it at a new location eg near an active promoter Since breakage of the DNA is one of the principal ways that ionizing radiation affects mammalian cells these new molecular ideas suggest ways that radiation induced DNA breaks might be involved as initial events in carcinogenesis While the possible involvement of oncogenes in radiation carcinogenesis is an exciting new development a direct sequential connection between early molecular changes in DNA and later tumor development has yet to be established Accordingly there is a tremendous need for experimental studies of how DNA alterations might convert normal cells to cancer cells

Enzyme Chemistry Colin Suckling,2012-12-06 As the first edition of this book was going through the publication process a revolution was taking place in the technologies available for the study of enzymes The techniques of molecular biology especially in genetic engineering of organisms and in site specific

mutagenesis of genes were established and were being brought into use to solve many problems in in enzymology Added to these fundamental and applied science not least advances the possibility of generating catalysts from antibodies has become a topic of major interest These major innovations have changed the emphasis of much bioorganic research whereas in the past the protein was often the sleeping partner in a study its detailed function is now the major focus of scientific interest Similarly in industry the potential of genetically manipulated organisms to satisfy the needs for the production of chemicals and foodstuffs has been widely recognised The second edition of *Enzyme Chemistry Impact and Applications* takes on board these new developments whilst maintaining the overall aims and views of the first edition Many of the chapters have been completely rewritten to take account of advances in the last five years especially with regard to the impact of biologically based technologies Although the book continues to approach its subject matter from the point of view of the chemist the increased interdisciplinary content of much modern science will be obvious from the discussion

Auditory Frequency Selectivity Brian Moore, 2012-12-06 One of the most fundamental aspects of the auditory system is its frequency selectivity the ability to resolve a complex sound into frequency components This ability plays a role in many aspects of auditory perception including the masking of one sound by another the perception of pitch for pure tones and complex tones the perception of timbre the perception of the relative phase of components in complex sounds and the perception of loudness Over the last decade there have been considerable advances in our understanding of frequency selectivity both at the physiological and psychophysical level and rapid progress continues to be made This book summarizes the proceedings of a NATO Advanced Research Workshop on Auditory Frequency Selectivity which was held in Wolfson College Cambridge from June 23rd to 27th 1986 The Workshop brought together leading researchers from all disciplines relevant to the topic with the aim of reviewing and consolidating the latest research findings and identifying areas of uncertainty or controversy where further research is needed The book is aimed primarily at research scientists and research students in the fields of psychology audiology auditory physiology biophysics medicine acoustical engineering noise control communication and speech science It should also be useful for advanced undergraduates in these disciplines A feature of the book is that it includes summaries of the discussions which followed the presentation of each paper at the Workshop
