Science, Technology and Global Governance John R. De La Mothe, 2014-04-23 Science, technology and innovation have long been key factors in the competitive advantage of nations. Today, however, the new international political economy is being increasingly driven by science and technology in new ways. Integration, globalization and internationalization have all become watchwords for a series of dynamic processes in which science and technology are deeply implicated. As a result, not only are the policies of national governments being exposed in terms of the limits of their sovereignty, but science and technology are being increasingly implicated in a wide array of public issues ranging from security, privacy, development and economic growth to employment, environment, foreign policy and geopolitics. Clearly, in today's emerging world, the ways in which governments organize their science and technology policy, their science and technology intelligence and their research advisory structures and resources matter more today than ever before. In turn, the contract between science and democracy is being rapidly redefined. This book is the first to comprehensively discuss these critical issues.

**Business Process Change** Varun Grover, William J. Kettinger, 1995-01-01 Examines a broad range of research and case studies that throws light on potential social and human factors which determine the success of information technology.

**Transforming Organizations** Thomas A. Kochan, Michael Useem, 1992 This book examines how organizations can and should transform their practices to compete in a world economy. Research results from a multidisciplinary team of MIT researchers along with the experiences and insights of a select group of industry practitioners are integrated into a model that stresses the need for systemic and transformative rather than piecemeal or incremental changes in organization practices and public policy. This integration of research and experience results in an argument for a new organizational learning model, one capable of gaining advantage from employee diversity, cooperation across organizational boundaries, strategic restructuring and advanced technology. The book begins with a foreword by Lester C. Thurow.

*Technological Change, Rationalisation and Industrial Relations* Otto Jacobi, Bob Jessop, Hans Kastendiek, Marino Regini, 2017-07-06 Originally published in 1986, the first part of this book outlines some of the general problems of technological change and labour relations. It discusses the politics of rationalisation and of industrialisation in the car industry by examining case studies of Volkswagen, British Leyland and FIAT. The impact developments exert on trade unions in the UK, Germany and Italy is discussed simultaneously.

change refers to the introduction of technological changes which make possible an increase in total factor productivity within only a limited range of techniques defined by the levels of factor intensity This contrasts with generalized technological change which is defined as the global shift of all the techniques represented on the map of isoquants of the neoclassical tradition The Economics of Localized Technological Change elaborates the notion of localized technology with respect to firms factor substitution sectors regions and techniques It also assesses the implications for industrial policy technology and innovation policy The book will be of interest to corporate policy makers scholars of industrial organization and economics of innovation as well as business school students      Zhao Ziyang and China's Political Future Guoguang Wu,Helen
