Loose Leaf Version for Human Biology Sylvia Mader, 2011-01-27 Instructors consistently ask for a human biology textbook that helps students develop an understanding of the main themes of biology while placing the material in the context of the human body Mader Human Biology was developed to fill this void Organized around the main themes of biology Human Biology guides students to think conceptually about biology and the world around them Just as the levels of biological organization flow from one level to the next themes and topics of Biology are tied to one another throughout the chapter and between the chapters and parts through the concept of homeostasis Combined with Dr Mader s hallmark writing style exceptional art program and pedagogical framework difficult concepts become easier to understand and visualize allowing students to focus on understanding how the concepts are related Multimedia Integration Michael Windelspecht represents the new generation of digital authors Through the integration of multimedia resources such as videos animations and MP3 files and in the design of a new series of interactive animations Dr Windelspecht has worked to bring Dr Mader s texts to the new generation of digital learners A veteran of the online hybrid and traditional teaching environments Dr Windelspecht is well versed in the challenges facing today s students and educators Dr Windelspecht has also acted as the subject matter expert on all aspects of the Connect content being prepared for the Mader series of textbooks *Human Biology* Daniel D. Hoffecker, 2017-10-31 Modern Humans is a vivid account of the most recent and perhaps the most important phase of human evolution the appearance of anatomically modern people Homo sapiens in Africa less than half a million years ago and their later spread throughout the world Leaving no stone unturned John F Hoffecker demonstrates that Homo sapiens

represents a major transition in the evolution of living systems in terms of fundamental changes in the role of non genetic information Modern Humans synthesizes recent findings from genetics including the rapidly growing body of ancient DNA the human fossil record and archaeology relating to the African origin and global dispersal of anatomically modern people Hoffeecker places humans in the broad context of the evolution of life emphasizing the critical role of genetic and non genetic forms of information in living systems as well as how changes in the storage transmission and translation of information underlie major transitions in evolution He also draws on information and complexity theory to explain the emergence of Homo sapiens in Africa several hundred thousand years ago and the rapid and unprecedented spread of our species into a variety of environments in Australia and Eurasia including the Arctic and Beringia beginning between 75 000 and 60 000 years ago This magisterial work will appeal to all with an interest in the ever fascinating field of human evolution *The Cambridge World History of Food* Kenneth F. Kiple, Kriemhild Coneè Ornelas, 2000 A two volume set which traces the history of food and nutrition from the beginning of human life on earth through the present *The Concept of Race in Natural and Social Science* E. Nathaniel Gates, 2014-05-01 Explores the concept of race The term race which originally denoted genealogical or class identity has in the comparatively brief span of 300 years taken on an entirely new meaning In the wake of the Enlightenment it came to be applied to social groups This ideological transformation coupled with a dogmatic insistence that the groups so designated were natural and not socially created gave birth to the modern notion of races as genetically distinct entities The results of this view were the encoding of race and racial hierarchies in law literature and culture How racial categories facilitate social control The articles in the series demonstrate that the classification of humans according to selected physical characteristics was an arbitrary decision that was not based on valid scientific method They also examine the impact of colonialism on the propagation of the concept and note that racial categorization is a powerful social force that is often used to promote the interests of dominant social groups Finally the collection surveys how laws based on race have been enacted around the world to deny power to minority groups A multidisciplinary resource This collection of outstanding articles brings multiple perspectives to bear on race theory and draws on a wider range of periodicals than even the largest library usually holds Even if all the articles were available on campus chances are that a student would have to track them down in several libraries and microfilm collections Providing of course that no journals were reserved for graduate students out for binding or simply missing This convenient set saves students substantial time and effort by making available all the key articles in one reliable source Authoritative commentary The series editor has put together a balanced selection of the most significant works accompanied by expert commentary A general introduction gives important background information and outlines fundamental issues current scholarship and scholarly controversies Introductions to individual volumes put the articles in context and draw attention to germinal ideas and major shifts in the field After reading the material even a beginning student will have an excellent grasp of the basics of the subject
