McGowan, Claire S.C. Slater, 2011-10-24 Biogeography represents one of the most complex and challenging aspects of macroevolutionary research requiring input from both the earth and life sciences Palaeogeographic reconstruction is frequently carried out by researchers with backgrounds in geology and palaeontology who are less likely to be familiar with the latest biogeographic techniques conversely biogeographic methods are often devised by neontologists who may be less familiar with the fossil record stratigraphy and palaeogeography Palaeogeography and Palaeobiogeography Biodiversity in Space and Time bridges the gap between these two communities of researchers who work on the same issues but typically use different types of data The book covers a range of topics and reflects some of the major overall questions in the field such as Which approaches are best suited to reconstructing biogeographic histories under a range of circumstances How do we maximize the use of organismal and earth sciences data to improve our understanding of events in earth history How well do analytical techniques devised for researching the biogeography of extant organisms perform in the fossil record Can alternative biodiversity metrics particularly those based on morphological measurements enhance our understanding of biogeographic patterns and processes This book approaches palaeobiogeography with coverage of technological applications and detailed case studies It spans a wide selection of overlapping and integrative disciplines including evolutionary theory vicariance biogeography extinctions and the philosophical aspects of palaeogeography It also highlights new technological innovations and applications for research Presenting a unique discussion of both palaeogeography and palaeobiogeography in one volume this book focuses both historically and philosophically on the interface between geology climate and organismal distribution *Revised and Updated Edition* Steven J.
