Our Population Thinking About:

Twentieth Century Population Thinking The Population Knowledge Network, 2015-09-16 This reader on the history of demography and historical perspectives on population in the twentieth century features a unique collection of primary sources from around the globe written by scholars politicians journalists and activists Many of the sources are available in English for the first time Background information is provided on each source Together the sources mirror the circumstances under which scientific knowledge about population was produced how demography evolved as a discipline and how demographic developments were interpreted and discussed in different political and cultural settings Readers thereby gain insight into the historical precedents on debates on race migration reproduction natural resources development and urbanization the role of statistics in the making of the nation state and family structures and gender roles among others The reader is designed for undergraduate and graduate students as well as scholars in the fields of demography and population studies as well as to anyone interested in the history of science and knowledge Population in the Human Sciences Philip Kreager, Bruce Winney, Stanley Ulijaszek, Cristian Capelli, 2015-03-05 The Human Sciences address problems in nature and society that often require coordinated approaches of several scientific disciplines and scholarly research embracing the social and biological sciences and history When we wish for example to understand how some sub populations and not others come to be vulnerable why a disease spreads in one part of a population and not another or which gene variants are transmitted across generations then a remarkable range of disciplinary perspectives need to be brought together from the study of institutional structures cultural boundaries and social networks down to the micro biology of cellular pathways and gene expression The need to explain and address differential impacts of pressing contemporary issues like AIDS ageing social and economic inequalities and environmental change are well known cases in point Population concepts models and evidence lie at the core of approaches to all of these problems if only because accurate differentiation and identification of groups their structures constituents and relations between sub populations are necessary to specify their nature and extent The study of population thus draws both on statistical methodologies of demography and population genetics and sustained observation of the ways in which populations and sub populations are formed maintained or broken up in nature in the laboratory and in society In an era in which research needs to operate on multiple levels population thinking thus provides a common ground for communication and critical thought across disciplines Population in the Human Sciences addresses the need for review and assessment of the framework of interdisciplinary population studies Limitations to prevailing postwar paradigms like the Evolutionary Synthesis and Demographic Transition were becoming evident by the 1970s Subsequent decades have witnessed an immense expansion of population modelling and related empirical inquiry with new genetic developments that have reshaped evolutionary population and developmental biology The rise of anthropological and historical demography and social network analysis are playing major roles in rethinking modern and earlier population

history More recently the emergence of sub disciplines like biodemography and evolutionary anthropology and growing links between evolutionary and developmental biology indicate a growing convergence of biological and social approaches to population The Judge ,1927

Evolutionary Economics and Creative Destruction J. Stanley Metcalfe,2006 The central theme of this book is competition treated as an evolutionary process in which the focus is upon economic change and not economic equilibrium This theme is explored by linking together differences in economic behaviour with the role of markets as co ordinating institutions In this picture innovation plays a central role as a primary source of differential behaviour of firms and the purpose of the book is to identify the consequences of these differences for competition and competitive advantage

Beyond Versus James Tabery,2023-10-31 Why the nature versus nurture debate persists despite widespread recognition that human traits arise from the interaction of nature and nurture If everyone now agrees that human traits arise not from nature or nurture but from the interaction of nature and nurture why does the nature versus nurture debate persist In *Beyond Versus* James Tabery argues that the persistence stems from a century long struggle to understand the interaction of nature and nurture a struggle to define what the interaction of nature and nurture is how it should be investigated and what counts as evidence for it Tabery examines past episodes in the nature versus nurture debates offers a contemporary philosophical perspective on them and considers the future of research on the interaction of nature and nurture From the eugenics controversy of the 1930s and the race and IQ controversy of the 1970s to the twenty first century debate over the causes of depression Tabery argues the polarization in these discussions can be attributed to what he calls an explanatory divide a disagreement over how explanation works in science which in turn has created two very different concepts of interaction Drawing on recent developments in the philosophy of science Tabery offers a way to bridge this explanatory divide and these different concepts integratively Looking to the future Tabery evaluates the ethical issues that surround genetic testing for genes implicated in interactions of nature and nurture pointing to what the future does and does not hold for a science that continues to make headlines and raise controversy *The Monthly Review* ,1841

The Essential Child Susan A. Gelman,2003-03-27 Essentialism is the idea that certain categories such as dog man or intelligence have an underlying reality or true nature that gives objects their identity Where does this idea come from In this book Susan Gelman argues that essentialism is an early cognitive bias Young children s concepts reflect a deep commitment to essentialism and this commitment leads children to look beyond the obvious in many converging ways when learning words generalizing knowledge to new category members reasoning about the insides of things contemplating the role of nature versus nurture and constructing causal explanations Gelman argues against the standard view of children as concrete or focused on the obvious instead claiming that children have an early powerful tendency to search for hidden non obvious features of things She also attacks claims that children build up their knowledge of the world based on simple associative learning strategies arguing that children s concepts are embedded in rich folk theories Parents don t explicitly teach children

to essentialize instead during the preschool years children spontaneously construct concepts and beliefs that reflect an essentialist bias Essentialist accounts have been offered in one form or another for thousands of years extending back at least to Aristotle and Plato Yet this book is the first to address the issues surrounding essentialism from a psychological perspective Gelman synthesizes over 15 years of empirical research on essentialism into a unified framework and explores the broader lessons that the research imparts concerning among other things human concepts children s thinking and the ways in which language influences thought This volume will appeal to developmental cognitive and social psychologists as well as to scholars in cognitive science and philosophy Critical Thinking and Writing for Nursing Students Bob Price, Anne Harrington, 2016-01-30 This book is a clear and practical guide to help students develop critical thinking writing and reflection skills It explains what critical thinking is and how students should use it throughout their nursing programme This new edition also provides an innovative new framework that helps students appreciate different levels of critical thinking and reflection to help nursing students appreciate the requirements of degree level study The book demonstrates the transferable nature of critical thinking and reflection from academic contexts to the real practice of nursing Key features Clear and straightforward introduction to critical thinking directly written for nursing students with chapters relating the subject to specific study and practice contexts Student examples and scenarios throughout including running case studies from four nursing students and further annotated examples of student s work on the website Each chapter is linked to the new NMC Standards and Essential Skills Clusters **Official Proceedings of the New York Railroad Club** New York Railroad Club, 1922 *Naked Economics: Undressing the Dismal Science* Charles Wheelan, 2019-01-01 International bestseller Clear concise informative and witty Chicago Tribune At last A new edition of the economics book that won t put you to sleep In fact you won t be able to put this bestseller down In our challenging economic climate this perennial favorite of students and general readers is more than a good read it s a necessary investment with a blessedly sure rate of return This revised and updated edition includes commentary on hot topics such as automation trade income inequality and America s rising debt Ten years after the financial crisis Naked Economics examines how policymakers managed the worst economic crisis since the Great Depression Demystifying buzzwords laying bare the truths behind oft quoted numbers and answering the questions you were always too embarrassed to ask the breezy Naked Economics gives you the tools to engage with pleasure and confidence in the deeply relevant not so dismal science *The Oxford Book of Modern Science Writing* Richard Dawkins, 2009 Selected and introduced by Richard Dawkins The Oxford Book of Modern Science Writing is a celebration of the finest writing by scientists for a wider audience revealing that many of the best scientists have displayed as much imagination and skill with the pen as they have in the laboratory This is a rich and vibrant collection that captures the poetry and excitement of communicating scientific understanding and scientific effort from 1900 to the present day Professor Dawkins has included writing from a diverse range of scientists some of whom need no introduction and some of whose

works have become modern classics while others may be less familiar but all convey the passion of great scientists writing about their science

Revisiting Normativity with Deleuze Rosi Braidotti, Patricia Pisters, 2013-03-14 This volume assembles some of the most distinguished scholars in the field of Deleuze studies in order to provide both an accessible introduction to key concepts in Deleuze's thought and to test them in view of the issue of normativity This includes not only the law but also the question of norms and values in the broader ethical political and methodological sense The volume argues that Deleuze's philosophy rejects the unitary vision of the subject as a self-regulating rationalist entity and replaces it with a process-oriented relational vision of the subject But what can we do exactly with this alternative nomadic vision What modes of normativity are available outside the parameters of liberal self-reflexive individualism on the one hand and the communitarian model on the other This interdisciplinary volume explores these issues in three directions that mirror Deleuze and Guattari's defense of the parallelism between philosophy science and the arts The volume therefore covers socio-political and legal theory the epistemological critique of scientific discourse and the cultural artistic and aesthetic interventions emerging from Deleuze's philosophy

Motivation Lambert Deckers, 2022-03-30 Motivation provides an accessible introduction to motivation and emotion combining classic studies with current research and uses numerous real-world examples to engage the student and make often difficult theoretical concepts come to life By understanding and applying the principles of motivation described in the text students will not only discover insights into what motivates their own behavior but also how to instigate self-change through goal setting Throughout the book the author adopts an evolutionary approach to explore the effect of interpersonal relationships food preferences fear music and the emotions on motivation at the same time considering how personality traits and psychological needs are essential for understanding why people are motivated by different things The motivation of compulsive behavior from addictions such as drugs gambling Internet gaming and obsessive exercise is also considered providing a truly comprehensive overview of biological psychological and environmental sources of motivation The sixth edition has been thoroughly updated throughout and is accompanied by an instructor's manual that contains multiple choice questions essay questions with answers websites related to motivation and emotion power point slides in-class activities and discussion questions It is an essential read for all students of motivation

Confidence and Legitimacy in Health Information and Communication Ceiline Paganelli, 2018-10-08 The question of trust is crucial in the field of health First because health is indicative of particularly strong issues at the societal regulatory institutional or individual levels secondly because the boundaries between specialized information validated by legitimate instances and uncommitted information have become permeable finally because it appears to be central within relations between actors in the field In this book we propose to address the trust in terms of the information and communication phenomena that are at work in the health sector and to look at the process of building the legitimacy of information in the health sector

Darwinian Populations and Natural Selection Peter Godfrey-Smith, 2009-03-26 In 1859 Darwin

described a deceptively simple mechanism that he called natural selection a combination of variation inheritance and reproductive success He argued that this mechanism was the key to explaining the most puzzling features of the natural world The exact nature of the Darwinian process has been controversial ever since Draws on new developments in biology philosophy of science and other fields to give a new analysis and extension of Darwin's idea The central concept used is that of a Darwinian population a collection of things with the capacity to undergo change by natural selection From this starting point new analyses of the role of genes in evolution the application of Darwinian ideas to cultural change and evolutionary transitions that produce complex organisms and societies are developed

How To Do Things With Logic C. Grant Luckhardt, William Bechtel, Grant Luckhardt, 2014-02-25 In the past 15 years a host of critical thinking books have appeared that teach students to find flaws in the arguments of others by learning to detect a number of informal fallacies This book is not in that tradition The authors of this book believe that while students learn to become vicious critics they still continue to make the very mistakes they criticize in others Thus this book has adopted the approach of teaching the construction of good arguments first and then introducing criticism as a secondary skill Moreover the emphasis of the book is not on learning to name fallacies but on being able to identify weaknesses in an argument so as to be able to construct an effective critique of that argument The book is accompanied by a workbook featuring a wealth of examples to help students acquire the material

The Health Gap Michael Marmot, 2015-11-03 In Baltimore's inner city neighborhood of Upton Druid Heights a man's life expectancy is sixty three not far away in the Greater Roland Park Poplar neighborhood life expectancy is eighty three The same twenty year avoidable disparity exists in the Calton and Lenzie neighborhoods of Glasgow and in other cities around the world In Sierra Leone one in 21 fifteen year old women will die in her fertile years of a maternal related cause in Italy the figure is one in 17 100 but in the United States which spends more on healthcare than any other country in the world it is one in 1 800 and now with the new administration chipping away at Obamacare the statistics stand to grow even more devastating Why Dramatic differences in health are not a simple matter of rich and poor poverty alone doesn't drive ill health but inequality does Indeed suicide heart disease lung disease obesity and diabetes for example are all linked to social disadvantage In every country people at relative social disadvantage suffer health disadvantage and shorter lives Within countries the higher the social status of individuals the better their health These health inequalities defy the usual explanations Conventional approaches to improving health have emphasized access to technical solutions and changes in the behavior of individuals but these methods only go so far What really makes a difference is creating the conditions for people to have control over their lives to have the power to live as they want Empowerment is the key to reducing health inequality and thereby improving the health of everyone Marmot emphasizes that the rate of illness of a society as a whole determines how well it functions the greater the health inequity the greater the dysfunction Marmot underscores that we have the tools and resources materially to improve levels of health for individuals and societies around the world and that to not do so

would be a form of injustice Citing powerful examples and startling statistics young men in the U S have less chance of surviving to sixty than young men in forty nine other countries The Health Gap presents compelling evidence for a radical change in the way we think about health and indeed society and inspires us to address the societal imbalances in power money and resources that work against health equity The Cambridge Companion to the 'Origin of Species' Michael Ruse,Robert J. Richards,2009 This Companion commemorates the 150th anniversary of the publication of the Origin of Species and examines its main arguments Drawing on the expertise of leading authorities in the field it also provides the contexts religious social political literary and philosophical in which the Origin was written **Statistical Concepts for the Behavioral Sciences** Harold O. Kiess,Bonnie A. Green,2019-12-19 The fourth edition of Statistical Concepts for the Behavioral Sciences emphasizes contemporary research problems to better illustrate the relevance of statistical analysis in scientific research All statistical methods are introduced in the context of a realistic problem many of which are from contemporary published research These studies are fully referenced so students can easily access the original research The uses of statistics are then developed and presented in a conceptually logical progression for increased comprehension by using the accompanying workbook and the problem sets Several forms of practice problems are available to students and presented in a manner that assists students in mastering component pieces before integrating them together to tackle more complicated real world problems *The Evolution of Institutional Economics* Geoffrey M Hodgson,2004-03-04 This exciting new book from Geoffrey Hodgson is eagerly awaited by social scientists from many different backgrounds This book charts the rise fall and renewal of institutional economics in the critical analytical and readable style that Hodgson s fans have come to know and love and that a new generation of readers will surely come to appreciat
