The Predictive Mind Jakob Hohwy, 2013-11-28 A new theory is taking hold in neuroscience It is the theory that the brain is essentially a hypothesis testing mechanism one that attempts to minimise the error of its predictions about the sensory input it receives from the world It is an attractive theory because powerful theoretical arguments support it and yet it is at heart stunningly simple Jakob Hohwy explains and explores this theory from the perspective of cognitive science and philosophy The key argument throughout The Predictive Mind is that the mechanism explains the rich deep and multifaceted character of our conscious perception It also gives a unified account of how perception is sculpted by attention and how it depends on action The mind is revealed as having a fragile and indirect relation to the world Though we are deeply in tune with the world we are also strangely distanced from it The first part of the book sets out how the theory enables rich layered perception The theory's probabilistic and statistical foundations are explained using examples from empirical research and analogies to different forms of inference The second part uses the simple mechanism in an explanation of problematic cases of how we manage to represent and sometimes misrepresent the world in health as well as in mental illness The third part looks into the mind and shows how the theory accounts for attention conscious unity introspection self and the privacy of our mental world

Wired for Culture: Origins of the Human Social Mind Mark Pagel, 2012-02-07 A fascinating far reaching study of how our species innate capacity for culture altered the course of our social and evolutionary history A unique trait of the human species is that our personalities lifestyles and worldviews are shaped by an accident of birth namely the culture into which we are born It is our cultures and not our genes that determine which foods we eat which languages we speak which people we love and marry and which people we kill in war But how did our species develop a mind that is hardwired for culture and why Evolutionary biologist Mark Pagel tracks this intriguing question through the last 80 000 years of human evolution revealing how an innate propensity to contribute and conform to the culture of our birth not only enabled human survival and progress in the past but also continues to influence our behavior today Shedding light on our species defining attributes from art morality and altruism to self interest deception and prejudice Wired for Culture offers surprising new insights into what it means to be human
