Outer Space and Legal Liability M.D. Forkosch, 2024-09-02 The Responsibility of International Organizations Toward Third Parties Moshe Hirsch, 2023-07-24 One of the far reaching changes in the past century is the rapid growth of international organizations International organizations are instruments for institutionalized co operation among states however they also generate growing risks to other actors in the international system The increased activity of international organizations may lead naturally to an infringement of the rights of others and the infliction of damage upon them In such cases the question arises of which legal principles apply to the relations between the wrongdoer organization and the victims of its activity This is the realm of responsibility of international organizations **Outer Space Law Question and Answer** Tunku Intan Mainura, 2018-04-20 The purpose of this book is to provide readers with the basic introduction of outer space law It contains full detailed and generic clarification and explanation of the provisions of the United Nations outer space treaties and resolutions **The Air Force Law Review** , 1992 **Legal Basis for a National Space Legislation** Julian Hermida, 2006-04-11 A GENERAL BACKGROUND The foremost goal of the international community in the area of private space launch services should be to induce states to implement effective licensing procedures applicable to commercial ventures for which state responsibility may 1 exist 1 PRIVATE SECTOR PARTICIPATION IN THE SPACE INDUSTRY In the first decades of the space age military and state security motivations indicated the direction of national space programs Now the development of space activities depends essentially upon the possibility of recovering 2 investments Private sector driven commercial endeavors in outer space have been increasing exponentially and have experienced a significant quantitative growth over the last years Spacefarers promote commercial participation of private companies in operations related to outer space and thus the private sector is now increasingly providing satellite telecommunications remote sensing global positioning and space launch services directly to its customers In this context overall revenues for the worldwide space industry 3 amounted to US 82 billion in 2001 In the late 1990 s the transponder demand in particular Ku band transponders was consistently on the rise due 4 to the escalated utilization of geostationary satellite transponders Global positioning systems have been playing an increasingly important role in navigation and remote sensing systems are mapping and documenting nearly 1 E A Frankle E J Steptoe Legal Considerations Affecting Commercial Space Launches From International Territory 1999 50 IISL at 10 Emphasis added 2 H L *State Accountability for Space Debris* Peter Stubbe, 2017-11-13 In *State Accountability for Space Debris* Peter Stubbe examines the legal consequences of space debris pollution which he argues is a global environmental concern The study finds that the customary no harm rule and Article IX of the Outer Space Treaty obligate States to prevent the generation of debris and that the international community as a whole has a legitimate interest in their compliance A breach of these obligations entails the responsibility of a State and compensation must be provided for damage caused by space debris The author treats responsibility and liability separately

and thoroughly scrutinizes both legal regimes with the help of common analytical elements Finally Peter Stubbe argues that a comprehensive traffic management system is required so as to ensure the safe and sustainable use of outer space **The Ultimate Space Law Collection** Dorina Andoni, 2013 The term Space Law refers to the body of international and national laws and customs governing human activities in outer space For the past half century the majority of outer space operations have been conducted by government agencies We now however stand at the precipice of a new era in spaceflight Following the retirement of the Space Shuttle private companies are preparing to assume many of the missions traditionally undertaken by governments and to open outer space to the general public At the same time questions of ownership and commercialization environmental protection as well as peaceful and equitable use of outer space are rising As space activities grow space law will have to face new challenges This first volume of the series Ultimate Collection in Space Law is consisted of the five international legal instruments namely the Outer Space Treaty the Rescue Agreement the Liability Convention the Registration Convention and the Moon Agreement as well as the most important declarations and principles as well as relevant Resolutions of the General Assembly These instruments provide for non appropriation of outer space by any one country arms control the freedom of exploration liability for damage caused by space objects the safety and rescue of spacecrafts and astronauts the prevention of harmful interference with space activities scientific investigation and the exploitation of natural resources in outer space and the settlement of disputes Dorina Andoni is an LLM student at Tilburg University and coordinator of the space law project at Global Law Association
