Fighting for More Golden Years: Battling Disease and Embracing Hope After Age 65 Daniel Muller, 2025-03-25 This is my personal story of battling leukemia as I entered my so called golden years Turning 65 marked the beginning of a series of profound changes brought on by both family struggles and personal health challenges Eventually I was diagnosed with a rare form of leukemia I endured grueling chemotherapy fought through debilitating side effects and then faced yet another blow new heart complications and the looming possibility of a second entirely different cancer The two years chronicled in this story are about more than just survival they are about fighting to hold on to my golden years for as long as possible while seeking hope through faith and the support of loved ones There are many books about miraculous recoveries and countless guides on maintaining a long healthy life through diet exercise and wellness habits But this is a different kind of story It is about confronting the stark realities of a declining quality of life and the ever present specter of death while still striving to remain positive hopeful and grounded in faith one day at a time

Golden Years? Deborah Carr, 2019-01-22 Thanks to advances in technology medicine Social Security and Medicare old age for many Americans is characterized by comfortable retirement good health and fulfilling relationships But there are also millions of people over 65 who struggle with poverty chronic illness unsafe housing social isolation and mistreatment by their caretakers What accounts for these disparities among older adults Sociologist Deborah Carr's *Golden Years* draws insights from multiple disciplines to illuminate the complex ways that socioeconomic status race and gender shape the nearly every aspect of older adults lives By focusing on an often invisible group of vulnerable elders *Golden Years* reveals that disadvantages accumulate across the life course and can diminish the well being of many Carr connects research in sociology psychology epidemiology gerontology and other fields to explore the well being of older adults On many indicators of physical health such as

propensity for heart disease or cancer black seniors fare worse than whites due to lifetimes of exposure to stressors such as economic hardships and racial discrimination and diminished access to health care In terms of mental health Carr finds that older women are at higher risk of depression and anxiety than men yet older men are especially vulnerable to suicide a result of complex factors including the rigid masculinity expectations placed on this generation of men Carr finds that older adults physical and mental health are also closely associated with their social networks and the neighborhoods in which they live Even though strong relationships with spouses families and friends can moderate some of the health declines associated with aging women and especially women of color are more likely than men to live alone and often cannot afford home health care services a combination that can be isolating and even fatal Finally social inequalities affect the process of dying itself with white and affluent seniors in a better position to convey their end of life preferences and use hospice or palliative care than their disadvantaged peers Carr cautions that rising economic inequality the lingering impact of the Great Recession and escalating rates of obesity and opioid addiction among other factors may contribute to even greater disparities between the haves and the have nots in future cohorts of older adults She concludes that policies such as income supplements for the poorest older adults expanded paid family leave and universal health care could ameliorate or even reverse some disparities A comprehensive analysis of the causes and consequences of later life inequalities Golden Years demonstrates the importance of increased awareness strong public initiatives and creative community based programs in ensuring that all Americans have an opportunity to age well

Herman Schmid,2004-12-15 This book informs the reader of the major preventive health recommendations now practiced by the medical community Prior to the middle of the last century medical care was primarily episodic Patients did not see their doctor until they were acutely ill Now the advances in medical knowledge of disease processes and the availability of improved diagnostic techniques and treatments have focused medical practice on the prevention of disease In other words before the occurrence of a heart attack stroke diabetes and even cancer there are detectable underlying disorders which when discovered and treated early can prevent life limiting disease Four underlying disorders namely high blood pressure abnormal blood lipids elevated blood sugar and overweight are major risk factors for the chronic diseases Five chronic diseases namely coronary artery disease cancer lung disease stroke and diabetes are responsible for 80% of deaths in the American population This book presents a preventive care plan in seven steps designed to counter these risk factors and diseases and extend both the length and quality of life The seven steps are discussed as separate chapters Exercise Weight Health Evaluation Non prescription Agents A Medical Approach A Surgical Approach and Preventive Preventive Care Doctors have learned that the chronic diseases associated with aging usually do not start in older age but often are present by middle age and younger Then changes in lifestyle and early treatment to control the known risk factors and underlying disorders are most effective in extending both the length and quality of life This book will provide pertinent medical information for the
