Sculpting in Steel and Other Metals Arthur Zaidenberg, 1974 Sculpting in Steel and Other Metals Arthur Zaidenberg, 1974-01-01 **Making Sculpture from Scrap Metal** Peter Parkinson, 2015-09-30 Transforming unlikely pieces of scrap metal into significant works of art giving new life to things we throw away is an accessible creative and fulfilling activity This book describes and illustrates the concerns and techniques involved in making this kind of sculpture looking behind the work at the richness and diversity of an area of sculpture that deserves to be far better known Topics covered include the role and purpose of sculpture the particular qualities of sculpture made from scrap metal and the practical processes involved in its making It also covers sources of scrap metal identifying metals reviewing metalworking techniques creative approaches different types of sculpture and the making finishing and installation of pieces of sculpture This book will be of great interest to blacksmiths sculptors and metalworkers and is beautifully illustrated with 108 colour photographs from work by professional sculptors and students showcasing a range of different approaches **Metal in Sculpture** Everett Sinclair, 2025-03-21 How have technological innovations shaped the artistic possibilities of metal sculpture across cultures and eras Metal in Sculpture explores the multifaceted relationship between metal design and art examining how different metals have been employed to create both monumental public works and intricate intimate sculptures This book delves into the transformative influence of materials and techniques on artistic expression providing a comprehensive overview of metal sculpture from antiquity to the present day The core topics include the properties of various metals and their suitability for sculptural applications the evolution of metalworking techniques and the diverse artistic styles that have emerged in response to these factors Understanding these elements is critical because metal's inherent characteristics strength malleability reflectivity directly impact the sculptor's creative process and the visual impact of the finished work The book provides historical context by tracing the use of metals in sculpture from ancient civilizations such as the bronze casting traditions of Greece and China to modern and contemporary practices It examines the social and economic factors that influenced the availability and use of specific metals While a basic familiarity with art history may be beneficial the book provides sufficient background information to make the content accessible to a broad audience interested in art and design The central argument is that metal sculpture is not merely a craft but a dynamic art form that continually reinvents itself through technological advancements and artistic innovation This dynamic interplay allows metal to transcend its utilitarian origins and serve as a powerful medium for artistic expression The book's structure progresses logically beginning with an introduction to the fundamental properties of metals used in sculpture It then explores the historical development of metalworking techniques like casting forging and welding Subsequent chapters analyze specific periods and movements such as Renaissance bronze sculpture the use of iron in the Industrial Revolution and contemporary explorations of aluminum and steel The book culminates with a discussion of the ethical and environmental considerations surrounding metal sourcing and

fabrication To support its arguments the book draws on a wide range of evidence including detailed analyses of specific sculptures historical documents and technical reports on metalworking processes It features case studies of prominent sculptors and their works illustrating how they have pushed the boundaries of the medium The book also connects to related fields such as materials science engineering and social history Materials science informs the understanding of metal properties while engineering principles explain structural considerations in large scale sculptures Social history provides context for the cultural and economic forces that shaped artistic production What distinguishes this book is its balanced approach combining technical explanations with artistic analysis It does more than simply catalog famous sculptures it dissects the how and why behind their creation offering insights into the minds of the artists and the challenges they faced The tone is authoritative yet accessible avoiding jargon while maintaining scholarly rigor The writing style aims to be engaging and informative appealing to art enthusiasts students of art history and sculpture designers and anyone interested in the intersection of art and technology As a work in the genres of Design Art and Design General the book integrates visual analysis historical context and technical information creating a cohesive and enlightening examination of metal in sculpture The scope is broad encompassing a wide range of metals techniques and styles but it focuses primarily on Western art traditions while acknowledging significant contributions from other cultures Readers can apply the knowledge gained to better understand the creative process behind metal sculpture appreciate the technical skill involved and evaluate the aesthetic qualities of different works The book also raises awareness of the environmental and ethical considerations surrounding the use of metals in art encouraging responsible practices in the field The book acknowledges debates surrounding the definition of art and craft and the role of technology in artistic creation By presenting diverse perspectives it encourages readers to form their own informed opinions on these complex issues

Creating a successful sculpture requires an imaginative concept and a sound design that utilize the potential and avoid the limitations of the material and the process used in making it Prior to a few decades ago most sculptors were restricted to carving stone and wood or casting plaster ceramics and bronze for their creations Contemporary sculptors however are no longer bound by the limitations of these traditional materials and processes and can now create works in sizes forms and textures that could not have been achieved previously Many modern sculptures are now made from materials ranging from steel and aluminum to plastics and composites using processes ranging from welding and adhesive bonding to molding and 3D printing To fully utilize the full potential of such new materials the sculptor needs to understand their points of strength their limitations and the most effective way of shaping them to achieve a given design Although this book is written by a materials engineer the subject matter is presented from the point of view of the sculptor with emphasis on the strengths and weaknesses of different materials their resistance to weather conditions natural color and possible surface textures possible methods of shaping and joining tools and equipment needed and safety measures to take Whenever possible case studies are used to illustrate the sequence of processes and the cost elements involved in shaping a given material to create an actual work of sculpture **Sculpture in Gotham** Michele H. Bogart,2018-04-15

Public sculpture is a major draw in today s cities and nowhere is this more the case than in New York In the Big Apple urban art has become synonymous with the municipal brand highlighting the metropolis as vibrant creative tolerant orderly and above all safe Sculpture in Gotham tells the story of how the City of New York came to be committed to public art patronage beginning in the mid 1960s In that era of political turbulence cultural activists and city officials for a time shifted away from traditional monuments joining forces to sponsor ambitious sculptural projects as an instrument for urban revitalization Focusing on specific people agencies and organizations and both temporary and permanent projects from the 1960s forward Michele H Bogart reveals the changing forms and meanings of municipal public art Sculpture in Gotham illustrates how such shifts came about at a time when art theories and styles were morphing markedly and when municipalities were reeling from racial unrest economic decline and countercultural challenges to culture as well as the state While sculptural installations on New York City property took time and were not without controversy Gotham s processes and policies produced notable results providing precedents and lessons for cities the world over **Metal Sculptures** Everett Sinclair,2025-03-21

Constructions of Media Authorship Christiane Heibach,Angela Krewani,Irene Schütze,2020-11-23 The author is dead long live the author This paradox has shaped discussions on authorship since at least the 1960s when the dominant notion of the individual author genius was first critically questioned The ongoing discussion has mainly focused on literature and the arts but has ignored nearly any artistic practice beyond these two fields Constructions of Media Authorship aims to fill this gap the volume s interdisciplinary contributions reflect historical and current artistic practices within various media and attempt to grasp them from different perspectives The first part sheds a new light on different artistic and design practices and questions the still dominant view on the individual identifiable author The second part discusses creative practices in literature emphasizing the interrelation of aesthetic discourses and media practices The third part investigates authoring in audiovisual media especially film and TV while the final part turns to electronic and digital media and their collective creativity and hybrid mediality The volume is also an attempt to develop new methodological approaches focusing on the interplay between various human and non human actors in different media constellations
