*Abstracts*, 1990 **Water Supply and Distribution Systems** Dragan A Savic, John K Banyard, 2024-10-25 Water Supply and Distribution Systems Second edition is a comprehensive introduction to the topic of how water is delivered to homes and businesses throughout the world It covers fundamental concepts and exploring the latest ideas of good practice *Advances in Modeling and Management of Urban Water Networks* Alberto Campisano, Enrico Creaco, 2021-01-06 The Special Issue on Advances in Modeling and Management of Urban Water Networks UWNs explores four important topics of research in the context of UWNs asset management modeling of demand and hydraulics energy recovery and pipe burst identification and leakage reduction In the first topic the multi objective optimization of interventions on the network is presented to find trade off solutions between costs and efficiency In the second topic methodologies are presented to simulate and predict demand and to simulate network behavior in emergency scenarios In the third topic a methodology is presented for the multi objective optimization of pump as turbine PAT installation sites in transmission mains In the fourth topic methodologies for pipe burst identification and leakage reduction are presented As for the urban drainage systems UDSs the two explored topics are asset management with a system upgrade to reduce flooding and modeling of flow and water quality with analyses on the transition from surface to pressurized flow impact of water use reduction on the operation of UDSs and sediment transport in pressurized pipes The Special Issue also includes one paper dealing with the hydraulic modeling of an urban river with a complex cross section *Proceedings of the Conference on Environmental Modeling and Simulation*, April

19-22, 1976, Cincinnati, Ohio Wayne R. Ott, 1976 Pattern Recognition for Reliability Assessment of Water Distribution Networks N. Trifunovic, 2012-02-13 This study investigates the patterns that describe reliability of water distribution networks focusing to the node connectivity energy balance and economics of construction operation and maintenance A number of measures to evaluate the network resilience has been developed and assessed to arrive at more accurate diagnostics of regular and irregular demand scenarios These measures have been proposed as a part of the methodology for snap shot assessment of network reliability based on its configuration and hydraulic performance Practical outcome of the research is the decision support tool for reliability based design of water distribution networks This computer package named NEDRA Network Design and Reliability Assessment consists of the modules for network generation filtering initialisation optimisation diagnostics and cost calculation which can be used for sensitivity analyses of single network layout or assessments of multiple layouts The study concludes that none of the analysed aspects develops clear singular patterns Nevertheless the proposed network buffer index NBI and the hydraulic reliability diagram HRD as visual representation of the network resilience give sufficient snap shot pointing the composition of the index value and displaying possible weak points in the network that can be hidden behind the averaged values of various reliability measures
