information retrieval and data mining on the Web are now of enormous practical interest The algorithms supporting these
activities combine the view of the Web as a text repository and as a graph induced in various ways by links among pages links
among hosts or other similar networks We also witness an increasing role of the second generation Web based applications
Web 2 0 such as social networking sites and wiki sites The workshop program consisted of 14 regular papers and two invited

own experience with the BELIEF software package As one of the first volumes to apply the Dempster Shafer belief functions
to a practical model a substantial portion of the book is devoted to a single example calculating the reliability of a complex
system This special feature enables readers to gain a thorough understanding of the application of this methodology The first
section provides a description of graphical belief models and probablistic graphical models that form an important subset the

second section discusses the algorithm used in the manipulation of graphical models the final segment of the book offers a complete description of the risk assessment example as well as the methodology used to describe it Graphical Belief
