Zeise,2020-11-30 This textbook is intended to give an introduction to neuroscience for students and

researchers with no biomedical background Primarily written for psychologists this volume is a digest giving a rapid but solid overview for people who want to inform themselves about the core fields and core concepts in neuroscience but don t need so many anatomical or biochemical details given in classical textbooks for future doctors or biologists It does not require any previous knowledge in basic science such as physics or chemistry On the other hand it contains chapters that do go beyond the issues dealt with in most neuroscience textbooks One chapter about mathematical modelling in neuroscience and another about tools of neuroscience explaining important methods The book is divided in two parts The first part presents core concepts in neuroscience Electrical Signals in the Nervous System Basics of Neuropharmacology Neurotransmitters The second part presents an overview of the neuroscience fields of special interest for psychology Clinical Neuropharmacology Inputs Outputs and Multisensory Processing Neural Plasticity in Humans Mathematical Modeling in Neuroscience Subjective Experience and its Neural Basis The last chapter Tools of Neuroscience presents important methodical approaches in neuroscience with a special focus on brain imaging Neuroscience for Psychologists aims to fill a gap in the teaching literature by providing an introductory text for psychology students that can also be used in other social sciences courses as well as a complement in courses of neurophysiology neuropharmacology or similar in careers outside as well as inside biological or medical fields Students of data sciences chemistry and physics as well as engineering interested in neuroscience will also profit from the text   Novel Applications of Bayesian and Other Models in Translational Neuroscience Reza Rastmanesh ,Jacob Raber ,Edward W. Hsu ,Benjamin R. Pittman-Polletta,2024-05-06 It has been proposed that the brain works in a Bayesian manner and based on the free energy principle the brain s main function is to reduce environmental uncertainty this is a proposed model as a universal principle governing adaptive brain function and structure There are many pathophysiological and clinical observations that can be easily explained by predictive Bayesian brain models However the novel applications of Bayesian models in translational neuroscience has been understudied and underreported For example variational Bayesian mixed effects inference has been successfully tested for classification studies A multi task Bayesian compressive sensing approach to simultaneously estimate the full posterior of the CSA ODF and diffusion weighted volumes from multi shell HARDI acquisitions has been recently publishe   **Neuro Fuzzy Hybrid Models for Classification in Medical Diagnosis** Patricia Melin,Juan Carlos Guzmán,German Prado-Arechiga,2020-10-27 This book is focused on the use of intelligent techniques such as fuzzy logic neural networks and bio inspired algorithms and their application in medical diagnosis The main idea is that the proposed method may be able to adapt to medical diagnosis problems in different possible areas of the medicine and help to have an improvement in diagnosis accuracy considering a clinical monitoring of 24 hours or more of the patient In this book tests were made with different architectures proposed in the different modules of the proposed model First it was possible to obtain the architecture of the fuzzy classifiers for the level of blood pressure and for the pressure load and these were optimized with the different bio inspired algorithms Genetic Algorithm and Chicken Swarm

Optimization Secondly we tested with a local database of 300 patients and good results were obtained It is worth mentioning that this book is an important part of the proposed general model for this reason we consider that these modules have a good performance in a particular way but it is advisable to perform more tests once the general model is completed
