Modeling and Using Context Anind Dey, Boicho Kokinov, David Leake, Roy Turner, 2005-07-11 Context is of crucial importance for research and applications in many disciplines as evidenced by many workshops symposia seminars and conferences on specific aspects of context The International and Interdisciplinary Conference on Modeling and Using Context CONTEXT the oldest conference series focusing on context provides a unique interdisciplinary emphasis bringing together participants from a wide range of disciplines including artificial intelligence cognitive science computer science linguistics organizational science philosophy psychology ubiquitous computing and application areas such as medicine and law to discuss and report on context related research and projects Previous CONTEXT conferences were held in Rio de Janeiro Brazil 1997 Trento Italy 1999 LNCS 1688 Dundee UK 2001 LNCS 2116 and Palo Alto USA 2003 LNCS 2680 CONTEXT 2005 was held in Paris France during July 5 8 2005 There was a strong response to the CONTEXT 2005 Call for Papers with 120 submissions received A careful review process assessed all submissions with each paper first reviewed by the international Program Committee and then reviewer discussions were initiated as needed to assure that the final decisions carefully considered all aspects of each paper Reviews of submissions by the Program Chairs were supervised independently and anonymously to assure fair consideration of all work Out of the 120 submissions 23 were selected as full papers for oral presentation and 20 were selected as full papers for poster presentation These outstanding papers are presented in this proceedings

results on context and is increasingly becoming an important reference for all people doing research on context. This is testified by the larger number of research areas that are represented at CONTEXT 99. In particular, Philosophy and Cognitive Psychology were not significantly present at the first conference and by the number and quality of submitted papers. Specifically, we received 118 papers, mostly of good or excellent quality. Among them, 33 (28%) have been accepted as full papers and 21 as short papers. We think it is fair to say that the 54 papers collected in this volume provide a significant picture of the international research on context currently going on. The notion of context plays an important role in many areas, both theoretical and applied, such as Formal Logic, Artificial Intelligence, Philosophy, Pragmatics, Computational Linguistics, Computer Science, Cognitive Psychology.

*Modeling and Using Context* Patrick Brézillon, Roy Turner, Carlo Penco, 2017-06-06. This book constitutes the proceedings of the 10th International and Interdisciplinary Conference on Modeling and Using Context, CONTEXT 2017, held in Paris, France, in June 2017. The 26 full papers and 15 short papers presented were carefully reviewed and selected from 88 submissions. The papers feature research in a wide range of disciplines related to issues of context and contextual knowledge and discuss commonalities across and differences between the disciplines' approaches to the study of context. They are organized in the following topical sections: context in representation, context modeling of human activities, context in communication, context awareness and various specific topics.

*Modeling and Using Context* Patrick Blackburn, Chiara Ghidini, Roy M. Turner, Fausto Giunchiglia, 2007-10-13. Whether you are a computer scientist, a logician, a philosopher, or a psychologist, it is crucial to understand the role that context and contextual information plays in reasoning and representation. The conference at which the papers in this volume were presented was the fourth in an international series devoted to research on context and was held in Stanford, USA, on June 23-25, 2003. The first conference in the series was held in Rio de Janeiro, Brazil, in 1997; the second was held in Trento, Italy, in 1999; and the third was held in Dundee, Scotland, UK, in 2001. CONTEXT 2003 brought together representative work from many different fields. In this volume, you will find philosophical theorizing, logical formalization, computational modelling, and indeed computational applications, together with work that approaches context from a more cognitive orientation. While we don't believe that this volume can capture the lively flavor of discussion of the conference itself, we do hope that researchers interested in context in any of its many manifestations will find something of interest here, perhaps something that will inspire new lines of work. We are very grateful to our invited speakers: Patrick Brézillon, University of Paris VI, France; Keith Devlin, CSLI, Stanford; and David Leake, Indiana University, USA, for presenting three important contemporary perspectives on the study of context.

*Research on Modeling and Using Context Over 25 Years* Patrick Brézillon, 2023-08-25. This book is the outcome of 25 years of research on how to model and use context in real-world applications, on a spectrum from technology-centered (SEPT, SART) to human-centered (e.g., FlexMim) applications, that is, from well-defined domains to more fuzzy ones. It presents an operational definition of context that initiated a conceptual framework associated with an implementation framework: the Contextual Graphs (CxG) formalism.
