Modeling Spatial and Economic Impacts of Disasters Yasuhide Okuyama, Stephanie E. Chang, 2013-06-29 This volume is dedicated to the memory of Barclay G Jones Professor of City and Regional Planning and Regional Science at Cornell University Over a decade ago Barclay took on a fledgling area of study economic modeling of disasters and nurtured its early development He served as the social science program director at the National Center for Earthquake Engineering Research NCEER a university consortium sponsored by the National Science Foundation and the Federal Emergency Management Agency of the United States In this capacity Barclay shepherded and attracted a number of regional scientists to the study of disasters He organized a conference held in the ill fated World Trade Center in September 1995 on The Economic Consequences of Earthquakes Preparing for the Unexpected He persistently advocated the importance of social science research in an establishment dominated by less than sympathetic natural scientists and engineers In 1993 Barclay organized the first of a series of sessions on Measuring Regional Economic Effects of Unscheduled Events at the North American Meetings of the Regional Science Association International RSAI This unusual nomenclature brought attention to the challenge that disasters largely unanticipated often sudden and always disorderly pose to the regional science modeling tradition The sessions provided an annual forum for a growing coalition of researchers where previously the literature had been fragmentary scattered and episodic Since Barclay's unexpected passing in 1997 we have continued this effort in his tradition

Modeling Spatial and Economic Impacts of Disasters Yasuhide Okuyama, Stephanie E. Chang, 2004-05-18 This book brings together a collection of innovative papers on strategies for analyzing the spatial and economic impacts of disasters Natural and human induced disasters pose several challenges for conventional modeling For example disasters entail complex linkages between the natural built and socio economic environments They often create chaos and economic disequilibrium and can also cause unexpected long term structural changes Dynamic interactions among agents and behavioral adjustments in a disaster become complicated The papers in this volume make notable progress in tackling these challenges through refinements of conventional methods as well as new modeling frameworks and multidisciplinary integrative strategies The papers also provide case study applications that afford new insights on disaster processes and loss reduction strategies

Techniques in Urban Hazard and Disaster Analysis Pamela S. Showalter,Yongmei Lu,2009-11-11 This book is the second in a series that examines how geographic information technologies GIT are being implemented to improve our understanding of a variety of hazard and disaster situations The main types of technologies covered under the umbrella of GIT as used in this volume are geographic information systems remote sensing not including ground penetrating or underwater systems and global positioning systems Our focus is on urban areas broadly defined in order to encompass rapidly growing and densely populated areas that may not be considered urban in the conventional sense The material presented here is also unabashedly

applied our goal is to provide GIT tools to those seeking more efficient ways to respond to recover from mitigate prevent and or model hazard and disaster events in urban settings Therefore this book was created not only with our colleagues in the academic world in mind but also for hazards professionals and practitioners We also believe graduate students will find the material presented here of interest as may upper division undergraduate students

Water Policy in the Netherlands Stijn Reinhard, Henk Folmer, 2011 As a low lying delta region with a high population density the Netherlands has long focused on the prevention of flooding catastrophes and the reclamation of valuable land The evolution of Dutch water governance beginning with the creation of local water boards in the Middle Ages and growing into a complex infrastructure of polders dams and controlled waterways offers a compelling study of pitfalls and successes within one of the world's most challenging regions for water management *Water Policy in the Netherlands* traces the arc of water governance in the country from technological in

Hurricanes and Climate Change James B. Elsner, Thomas H. Jagger, 2010-01-23 Recent studies suggest that tropical cyclones are more powerful than in the past with the most dramatic increase in the North Atlantic The increase is correlated with an increase in ocean temperature A debate concerns the nature of these increases with some scientists attributing them to a natural climate fluctuation and others suggesting climate change related to anthropogenic increases in forcing from greenhouse gases A Summit on Hurricanes and Climate Change was held during the spring of 2007 on the island of Crete that brought together leading academics and researchers on both sides of the scientific debate to discuss new research and express opinions about what will happen in the future with regard to hurricane activity This proceedings volume highlights the state of the science research into various aspects of the hurricane climate connection It is likely that the science presented here will lead to new research that will help answer crucial questions about our sustainable future

The Oxford Handbook of Urban Economics and Planning Nancy Brooks, Kieran Donaghy, Gerrit-Jan Knaap, 2012-01-12 This volume embodies a problem driven and theoretically informed approach to bridging frontier research in urban economics and urban regional planning The authors focus on the interface between these two subdisciplines that have historically had an uneasy relationship Although economists were among the early contributors to the literature on urban planning many economists have been dismissive of a discipline whose leading scholars frequently favor regulations over market institutions equity over efficiency and normative prescriptions over positive analysis Planners meanwhile even as they draw upon economic principles often view the work of economists as abstract not sensitive to institutional contexts and communicated in a formal language spoken by few with decision making authority Not surprisingly papers in the leading economic journals rarely cite clearly pertinent papers in planning journals and vice versa Despite the historical divergence in perspectives and methods urban economics and urban planning share an intense interest in many topic areas the nature of cities the prosperity of urban economies the efficient provision of urban services efficient systems of transportation and the proper allocation of land between urban and environmental uses In bridging this gap the book highlights the best scholarship

in planning and economics that address the most pressing urban problems of our day and stimulates further dialog between scholars in urban planning and urban economics Encyclopedia of Technological Hazards and Disasters in the Social Sciences Duane A. Gill,Liesel A. Ritchie,Nnenia M. Campbell,2024-11-08 The Encyclopedia of Technological Hazards and Disasters in the Social Sciences brings together an array of global experts to investigate explore and analyse human caused disaster events Providing insights into both the origins and aftermaths of disaster events it offers advanced understanding of a broad range of disaster events facing society during the Anthropocene Critical Infrastructure Alan T. Murray,Tony Grubestic,2007-05-05 This text brings together differing geographic perspectives in modeling and analysis in order to highlight infrastructure weaknesses or plan for their protection Offering new methodological approaches the book explores the potential consequences of critical infrastructure failure stemming from both man made and natural disasters The approaches employed are wide ranging including geographic economic and social perspectives
