Introduction to Computational Optimization Models for Production Planning in a Supply Chain Stefan Voss, David L. Woodruff, 2003 The book begins with an easy to read introduction to the concepts associated with the creation of optimization models for production planning These concepts are then applied to well known planning models namely mrp and MRP II From this foundation fairly sophisticated models for supply chain management are developed Another unique feature is that models are developed with an eye toward implementation In fact there is a chapter that provides explicit examples of implementation of the basic models using a variety of popular commercially available modeling languages

Power and Timing Modeling, Optimization and Simulation Jorge Juan Chico, Enrico Macii, 2003-10-02 Welcome to the proceedings of PATMOS 2003 This was the 13th in a series of international workshops held in several locations in Europe Over the years PATMOS has gained recognition as one of the major European events devoted to power and timing aspects of integrated circuit and system design Despite its significant growth and development PATMOS can still be considered as a very informal forum featuring high level scientific presentations together with open discussions and panel sessions in a free and relaxed environment This year PATMOS took place in Turin Italy organized by the Politecnico di Torino with technical co sponsorship from the IEEE Circuits and Systems Society and the generous support of the European Commission as well as that of several industrial sponsors including BullDAST Cadence Mentor Graphics STMicroelectronics and Synopsys The objective of the PATMOS workshop is to provide a forum to discuss and investigate the emerging problems in methodologies and tools for the design of new generations of integrated circuits and systems A major emphasis of the technical program is on speed and low power aspects with particular regard to modeling characterization design and architectures

Botlagunta Preethish Nanan, Nonlinear Financial Econometrics: Forecasting Models, Computational and Bayesian Models G. Gregoriou, R. Pascual, 2010-12-21 This book investigates several competing forecasting models for interest rates financial returns and realized volatility addresses the usefulness of nonlinear models for hedging purposes and proposes new computational techniques to estimate financial processes Scalable Optimization via Probabilistic Modeling Martin

Pelikan, Kumara Sastry, Erick Cantú-Paz, 2007-01-12 I am not usually a fan of edited volumes Too often they are an incoherent hodgepodge of remnants renegades or rejects foisted upon an unsuspecting reading public under a misleading or fraudulent title The volume Scalable Optimization via Probabilistic Modeling From Algorithms to Applications is a worthy addition to your library because it succeeds on exactly those dimensions where so many edited volumes fail For example take the title Scalable Optimization via Probabilistic Modeling From Algorithms to Applications You need not worry that you are going to pick up this book and find stray articles about anything else This book focuses like a laser beam on one of the hottest topics in evolutionary computation over the last decade or so estimation of distribution algorithms EDAs EDAs borrow evolutionary computation's population orientation and selectionism and throw out the genetics to give us a hybrid of substantial power elegance and extensibility The article sequencing in most edited volumes is hard to understand but from the get go the editors of this

volume have assembled a set of articles sequenced in a logical fashion The book moves from design to efficiency enhancement and then concludes with relevant applications The emphasis on efficiency enhancement is particularly important because the data mining perspective implicit in EDA opens up the world of optimization to new methods of data guided adaptation that can further speed solutions through the construction and utilization of effective surrogates hybrids and parallel and temporal decompositions

Multidisciplinary Design Optimization in Computational Mechanics Piotr Breitenkopf, Rajan Filomeno Coelho, 2013-02-04 This book provides a comprehensive introduction to the mathematical and algorithmic methods for the Multidisciplinary Design Optimization MDO of complex mechanical systems such as aircraft or car engines We have focused on the presentation of strategies efficiently and economically managing the different levels of complexity in coupled disciplines e.g structure fluid thermal acoustics etc ranging from Reduced Order Models ROM to full scale Finite Element FE or Finite Volume FV simulations Particular focus is given to the uncertainty quantification and its impact on the robustness of the optimal designs A large collection of examples from academia software editing and industry should also help the reader to develop a practical insight on MDO methods

Chen,2008-09-10 In recent years the issue of linkage in GEAs has garnered greater attention and recognition from researchers Conventional approaches that rely much on ad hoc tweaking of parameters to control the search by balancing the level of exploitation and exploration are grossly inadequate As shown in the work reported here such parameters tweaking based approaches have their limits they can be easily fooled by cases of triviality or peculiarity of the class of problems that the algorithms are designed to handle Furthermore these approaches are usually blind to the interactions between the decision variables thereby disrupting the partial solutions that are being built up along the way Advanced
