### **Modelling In Natural Sciences Design Validation And Case Studies:**

*Modelling in Natural Sciences* Tibor Müller, Harmund Müller, 2003-02-14 This book defines the wide application of the art of modelling. The main emphasis is on the imaging of dynamic processes which are analysed and subdivided into their atomic constituents by means of systems analysis. The cyclic structure and the stages of models set up are explained. The evaluation of a model's quality is regarded as a stochastic process. The aspects of grade used in different fields of sciences are brought into perspective. Thus a quantitative concept of validity on the basis of conditional degrees of rational belief can be developed.

**Museums as Cultures of Copies** Brita Brenna, Hans Dam Christensen, Olav Hamran, 2018-12-07 Few institutions are warier of copies than museums. Few fields of knowledge are more prone to denounce copies as fake than the heritage field. Few discourses are as concerned with authenticity, aura, originals and provenance as those concerning exhibiting and collecting. So why is it that these are institutions, fields and discourses where copies proliferate and copying techniques have thrived for hundreds of years? *Museums as Cultures of Copies* aims to make the copying practices of museums visible and to discuss from a range of interrelated perspectives precisely what function copies fulfil in the heritage field and in museums today. With contributions from Europe and Canada, the book interrogates the meaning of copies and presents copying as a fully integrated part of museum work. Including chapters on ethnographic mannequins, digitalized photos, death masks, museum documentation and mechanical models, contributors consider how copying as a cultural form changes according to time and place and how new forms of copying and copy technologies challenge and expand museum work today. Arguing that copying is at the basis of museum practice and that new technologies and practices have been taken up and developed in museums since their inception, the book presents both heritage work and copies in a new light. *Museums as Cultures of Copies* should be of great interest to academics, scholars and postgraduate students working in the fields of museum and heritage studies as well as visual studies, cultural history and archaeology. It should also be essential reading for

museum practitioners

**Insights into the World of Diatoms: From Essentials to Applications** Prateek

Srivastava, Ambrina Sardar Khan, Jyoti Verma, Shalini Dhyani, 2023-03-31 This edited book provides a comprehensive and a reliable source of information on all major areas of diatom research. It addresses research advances in the key areas of diatom biology, morphology, systematics, phylogeny, and ecology along with their interdisciplinary applications. Diatoms are the world's most diverse group of algae populating the freshwater and marine ecosystems of the world. They are unicellular photosynthetic eukaryotes having ornate silicified cell walls. Diatoms contribute around 25% of annual global carbon fixation which is more than all of the terrestrial rainforests combined. Diatoms underpin major aquatic food webs and drive global biogeochemical cycles and have several ecological and interdisciplinary applications. This book targets a wide range of audience including researchers, academicians, teachers, and students of varied disciplines such as biology, environmental sciences, ecology, evolution, nanotechnology, and other related disciplines. It is a useful read for beginners as well as advanced researchers.

**Alkaliphiles in Biotechnology**

Gashaw Mamo, Bo Mattiasson, 2020-06-26 This book is devoted to alkaliphiles, their microbiology, biotechnological applications, and adaptive mechanisms. Alkaliphiles are extremophilic organisms that are adapted to thrive in alkaline environments. Over the years, a wide variety of alkaliphiles belonging to domain Bacteria, Archaea, and Eukarya have been isolated and studied. These organisms use various adaptive mechanisms to thrive in extreme alkaline environments, and some of these adaptive mechanisms are of immense importance to a range of biotechnological applications. In this book, readers will learn about the adaptive strategies of alkaliphiles in colonizing alkaline habitats with a main focus on 1) the production of enzymes that are active and stable in the high pH environment and 2) the production of acids that decrease the pH of their immediate surrounding environment. Enzymes that are operationally stable at high pH, also known as alkaline active enzymes, are desirable in several applications such as detergent formulating and leather tanning processes, and they are among the major selling enzymes and the most important industrial enzymes. The growing demand in many existing and emerging biotechnological applications led to the discovery, characterization, engineering, and evaluation of diverse types of alkaline active enzymes. In addition to the use of these fascinating enzymes in biotechnological applications, readers will discover the mechanisms of action and stability of these enzymes at extreme pH. Studies have shown that some alkaliphiles decrease the severity of the high pH of their media by producing a substantial amount of organic acids, which could be of great interest in various applications presented in this book. In addition to enzymes and organic acids, other products of biotechnological importance such as carotenoids, bioactive substances, and chelators have also attracted researchers' attention. Whole cells of alkaliphiles have been used as food and feed and are also useful in environmental applications such as in waste treatment and construction.

**Life on Earth and other Planetary Bodies** Arnold Hanslmeier, Stephan Kempe, Joseph Seckbach, 2012-10-29 A trio of editors Professors from Austria Germany and Israel present Life on Earth and other Planetary Bodies The contributors are from twenty various countries and present their research on life here as well as the possibility for extraterrestrial life This volume covers concepts such as life's origin hypothesis of Panspermia and of life possibility in the Cosmos The topic of extraterrestrial life is currently hot and the object of several congresses and conferences While the diversity of normal biota is well known life on the edge of the extremophiles is more limited and less distributed Other subjects discussed are Astrobiology with the frozen worlds of Mars Europa and Titan where extant or extinct microbial life may exist in subsurface oceans conditions on icy Mars with its saline alkaline and liquid water which has been recently discovered chances of habitable Earth like or the terrestrial analogues exoplanets and SETI's search for extraterrestrial Intelligence

Origins Joseph Seckbach, 2004-06-30 In this book forty eminent scientists examine the astrobiological origins of life and the emergence of biodiversity in extreme environments The coverage includes extremophiles microbes living in hostile conditions of high temperature psychrophilic UV radiation and halophilic environments Also discussed are the origin and history of Martian water and the possible biogeochemistry inside Titan

**Geologica Belgica**, 2005      SOFSEM 2009: Theory and Practice of Computer Science Mogens Nielsen, Antonin Kucera, Peter Bro Miltersen, Catuscia Palamidessi, Petr Tuma, Frank Valencia, 2009-01-23 This book constitutes the refereed proceedings of the 35th Conference on Current Trends in Theory and Practice of Computer Science SOFSEM 2009 held in pindleruv Ml n Czech Republic in January 2009 The 49 revised full papers presented together with 9 invited contributions were carefully reviewed and selected from 132 submissions SOFSEM 2009 was organized around the following four tracks Foundations of Computer Science Theory and Practice of Software Services Game Theoretic Aspects of E commerce and Techniques and Tools for Formal Verification      *Process Design for Natural Scientists* Anna-Lena Lamprecht, Tiziana Margaria, 2014-09-19 This book presents an agile and model driven approach to manage scientific workflows The approach is based on the Extreme Model Driven Design XMDD paradigm and aims at simplifying and automating the complex data analysis processes carried out by scientists in their day to day work Besides documenting the impact the workflow modeling might have on the work of natural scientists this book serves three major purposes 1 It acts as a primer for practitioners who are interested to learn how to think in terms of services and workflows when facing domain specific scientific processes 2 It provides interesting material for readers already familiar with this kind of tools because it introduces systematically both the technologies used in each case study and the basic concepts behind them 3 As the addressed thematic field becomes increasingly relevant for lectures in both computer science and experimental sciences it also provides helpful material for teachers that plan similar courses      *Design and Analysis of Long-term Ecological Monitoring Studies* Robert A. Gitzen, 2012-06-07 Comprehensive and multidisciplinary coverage of fundamental and advanced statistical tools and issues relevant to long term ecological monitoring      *Mathematics and Life Sciences* Alexandra V. Antoniouk, Roderick V. N. Melnik, 2012-12-19 The book provides a unique collection of in depth mathematical statistical and modeling methods and techniques for life sciences as well as their applications in a number of areas within life sciences The book provides also with a range of new ideas that represent emerging frontiers in life sciences where the application of such quantitative methods and techniques is becoming increasingly important Many areas within life sciences are becoming increasingly quantitative and the progress in those areas will be more and more dependent on the successful development of advanced mathematical statistical and modelling methodologies and techniques The state of the art developments in such methodologies and techniques are scattered throughout research journals and hardly accessible to the practitioners in those areas This book identifies a number of frontier areas where such methodologies and techniques have recently been developed and are to be published here for the first time bringing substantial potential benefit to a range of applications in life sciences In addition

the book contains several state of the art surveys at the interface of mathematics and life sciences that would benefit a larger interdisciplinary community It is aimed at researchers in academia practitioners and graduate students who want to foster interdisciplinary collaborations required to meet the challenges at the interface of modern life sciences and mathematics

**Experimental Design Research** Philip Cash,Tino Stanković,Mario Štorga,2016-05-17 This book presents a new multidisciplinary perspective on and paradigm for integrative experimental design research It addresses various perspectives on methods analysis and overall research approach and how they can be synthesized to advance understanding of design It explores the foundations of experimental approaches and their utility in this domain and brings together analytical approaches to promote an integrated understanding The book also investigates where these approaches lead to and how they link design research more fully with other disciplines e g psychology cognition sociology computer science management Above all the book emphasizes the integrative nature of design research in terms of the methods theories and units of study from the individual to the organizational level Although this approach offers many advantages it has inherently led to a situation in current research practice where methods are diverging and integration between individual team and organizational understanding is becoming increasingly tenuous calling for a multidisciplinary and transdisciplinary perspective Experimental design research thus offers a powerful tool and platform for resolving these challenges Providing an invaluable resource for the design research community this book paves the way for the next generation of researchers in the field by bridging methods and methodology As such it will especially benefit postgraduate students and researchers in design research as well as engineering designers
