Modelling Longitudinal And Spatially Correlated Data Methods Applications And Future Directions:

Modelling Longitudinal and Spatially Correlated Data Timothy G. Gregoire, David R. Brillinger, Peter Diggle, Estelle Russek-Cohen, William G. Warren, Russell D. Wolfinger, 2012-12-06 Correlated data arise in numerous contexts across a wide spectrum of subject matter disciplines Modeling such data present special challenges and opportunities that have received increasing scrutiny by the statistical community in recent years In October 1996 a group of 210 statisticians and other scientists assembled on the small island of Nantucket U S A to present and discuss new developments relating to Modelling Longitudinal and Spatially Correlated Data Methods Applications and Future Directions Its purpose was to provide a cross disciplinary forum to explore the commonalities and meaningful differences in the source and treatment of such data This volume is a compilation of some of the important invited and volunteered presentations made during that conference The three days and evenings of oral and displayed presentations were arranged into six broad thematic areas The session themes the invited speakers and the topics they addressed were as follows Generalized Linear Models Peter McCullagh Residual Likelihood in Linear and Generalized Linear Models Longitudinal Data Analysis Nan Laird Using the General Linear Mixed Model to Analyze Unbalanced Repeated Measures and Longitudinal Data Spatio Temporal Processes David R Brillinger Statistical Analysis of the Tracks of Moving Particles Spatial Data Analysis Noel A Cressie Statistical Models for Lattice Data Modelling Messy Data Raymond J Carroll Some Results on Generalized Linear Mixed Models with Measurement Error in Covariates Future Directions Peter J Antedependence Models for Longitudinal Data Dale L. Zimmerman, Vicente A. Núñez-Antón, 2009-08-19 The First Book Dedicated to This Class of Longitudinal Models Although antedependence models are particularly useful for modeling longitudinal data that exhibit serial correlation few books adequately cover these models By gathering results scattered throughout the literature Antedependence Models for Longitudinal Data offers a convenient systematic way to learn about antedependence models Illustrated with numerous examples the book also covers some important statistical inference procedures associated with these models After describing unstructured and structured antedependence models and their properties the authors discuss informal model identification via simple summary statistics and graphical methods They then present formal likelihood based procedures for normal antedependence models including maximum likelihood and residual maximum likelihood estimation of parameters as well as likelihood ratio tests and penalized likelihood model selection criteria for the model's covariance structure and mean structure The authors also compare the performance of antedependence models to other models commonly used for longitudinal data With this book readers no longer have to search across widely scattered journal articles on the subject The book provides a thorough treatment of the properties and statistical inference procedures of various antedependence models Linear Mixed Models for Longitudinal Data Geert Verbeke, Geert Molenberghs, 2009-05-12 This book provides a comprehensive treatment of linear mixed models for continuous longitudinal data Next to model formulation this edition puts major emphasis on exploratory data analysis for

all aspects of the model such as the marginal model subject specific profiles and residual covariance structure Further model diagnostics and missing data receive extensive treatment Sensitivity analysis for incomplete data is given a prominent place Most analyses were done with the MIXED procedure of the SAS software package but the data analyses are presented in a software independent fashion

Analysis of Longitudinal Data Peter Diggle, Patrick Heagerty, Kung-Yee Liang, Scott Zeger, 2013-03-14 The first edition of *Analysis of Longitudinal Data* has become a classic Describing the statistical models and methods for the analysis of longitudinal data it covers both the underlying statistical theory of each method and its application to a range of examples from the agricultural and biomedical sciences The main topics discussed are design issues exploratory methods of analysis linear models for continuous data general linear models for discrete data and models and methods for handling data and missing values Under each heading worked examples are presented in parallel with the methodological development and sufficient detail is given to enable the reader to reproduce the author's results using the data sets as an appendix This second edition published for the first time in paperback provides a thorough and expanded revision of this important text It includes two new chapters the first discusses fully parametric models for discrete repeated measures data and the second explores statistical models for time dependent predictors

Mathematical and Statistical Methods for Insurance and Finance Cira Perna, Marilena Sibillo, 2007-12-12 The interaction between mathematicians and statisticians reveals to be an effective approach to the analysis of insurance and financial problems in particular in an operative perspective The Maf2006 conference held at the University of Salerno in 2006 had precisely this purpose and the collection published here gathers some of the papers presented at the conference and successively worked out to this aim They cover a wide variety of subjects in insurance and financial fields
