**The Modelling and Analysis of Security Protocols** Peter Ryan, Steve A. Schneider, 2001 An introduction to CSP Modelling security protocols in CSP Expressing protocol goals Overview of FDR Casper Encoding protocols and intruders for FDR Theorem proving Simplifying transformations Other approaches Prospects and wider issues Modelling and Analysis of Security Protocols G. Lowe, **Secure Transaction Protocol Analysis** Qingfeng Chen, Chengqi Zhang, Shichao Zhang, 2008-07-30 The present volume arose from the need for a comprehensive coverage of the state of the art in security protocol analysis It aims to serve as an overall course aid and to provide self study material for researchers and students in formal methods theory and applications in e commerce data analysis and data mining The volume will also be useful to anyone interested in secure e commerce The book is organized in eight chapters covering the main approaches and tools in formal methods for security protocol analysis It starts with an introductory chapter presenting the fundamentals and background knowledge with respect to formal methods and security protocol analysis Chapter 2 provides an overview of related work in this area including basic concepts and terminology Chapters 3 and 4 show a logical framework and a model checker for analyzing secure transaction protocols Chapter 5 explains how to deal with uncertainty issues in secure messages including inconsistent messages and conflicting beliefs in messages Chapter 6 integrates data mining with security protocol analysis and Chapter 7 develops a new technique for detecting collusion attack in security protocols Chapter 8 gives a summary of the chapters and presents a brief discussion of some emerging issues in the field *Automated Reasoning for Security Protocol Analysis and Issues in the Theory of Security* Alessandro Armando, Gavin Lowe, 2010-10-08 This book constitutes the proceedings of the Joint Workshop on Automated Reasoning for Security Protocol Analysis and Issues in the Theory of Security held in Paphos Cyprus in March 2010 Analysis of Real-World Security Protocols in a Universal Composability Framework Max Tuengerthal, 2013 Security protocols employed in practice are used in our everyday life and we heavily depend on their security The complexity of these protocols still poses a big challenge on their comprehensive analysis To cope with this complexity a promising approach is modular security analysis based on universal composability frameworks such as Canetti's UC model This appealing approach has however only very rarely been applied to the analysis of existing real world protocols Either the analysis was not fully modular or it could only be applied to idealized variants of the protocols The main goal of this thesis therefore is to push modular protocol analysis as far as possible but without giving up on accurate modeling Our main contributions in a nutshell An ideal functionality for symmetric key cryptography that provides a solid foundation for faithful composable cryptographic analysis of real world security protocols A computational soundness result of formal analysis for key exchange protocols that use symmetric encryption Novel universal and joint state composition theorems that are applicable to the analysis of real world security protocols Case studies on several security protocols SSL TLS IEEE 802.11i WPA2 SSH IPsec and EAP PSK We showed that our new composition theorems can be used

for a faithful modular analysis of these protocols In addition we proved composable security properties for two central protocols of the IEEE standard 802.11i namely the 4 Way Handshake Protocol and the CCM Protocol This constitutes the first rigorous cryptographic analysis of these protocols While our applications focus on real world security protocols our theorems models and techniques should be useful beyond this domain

Analyzing Security Protocols

*Operational Semantics and Verification of Security Protocols* Cas Cremers, Sjouke Mauw, 2012-10-30

Security protocols are widely used to ensure secure communications over insecure networks such as the internet or airwaves. These protocols use strong cryptography to prevent intruders from reading or modifying the messages. However, using cryptography is not enough to ensure their correctness. Combined with their typical small size which suggests that one could easily assess their correctness, this often results in incorrectly designed protocols. The authors present a methodology for formally describing security protocols and their environment. This methodology includes a model for describing protocols, their execution model, and the intruder model. The models are extended with a number of well-defined security properties which capture the notions of correct protocols and secrecy of data. The methodology can be used to prove that protocols satisfy these properties. Based on the model, they have developed a tool set called Scyther that can automatically find attacks on security protocols or prove their correctness. In case studies, they show the application of the methodology as well as the effectiveness of the analysis tool. The methodology's strong mathematical basis, the strong separation of concerns in the model, and the accompanying tool set make it ideally suited both for researchers and graduate students of information security or formal methods and for advanced professionals designing critical security protocols.

The increasing relevance of security to real life applications such as electronic commerce and Internet banking is attested by the fast growing number of search groups, events, conferences, and summer schools that address the study of foundations for the analysis and the design of security aspects. The International School on Foundations of Security Analysis and Design (FOSAD) see <http://www.sti.uniurb.it/events/fosad> has been one of the foremost events established with the goal of disseminating knowledge in this critical area, especially for young researchers approaching the field and graduate students coming from less favoured and non-leading countries. The FOSAD school is held annually at the Residential Centre of Bertinoro (<http://www.ceub.it>) in the fascinating setting of a former convent and episcopal fortress that has been transformed into a modern conference facility with computing services and Internet access. Since the first school in 2000, FOSAD has attracted more than 250 participants and 50 lecturers from all over the world. A collection of tutorial lectures from FOSAD 2000 was published in Springer's LNCS volume 2171. Some of the tutorials given at the two successive schools FOSAD 2001 and 2002 are gathered in a second volume LNCS 2946. To continue this tradition, the present volume collects a set of tutorials from the fourth FOSAD held in 2004 and from FOSAD 2005.
