## **Models And Economic Theory:**

Models and Economic Theory Ivy Papps, Willie Henderson, 1977      Some Quantitative Methods and Models in Economic Theory Alexander V. Prasolov, 2016 Introduction Linear dynamic models Lotka Volterra's models in economics Various dynamic models      The Methodology of Economic Model Building (Routledge Revivals) Lawrence A. Boland, 2014-05-01 The major methodological task for modern economists has been to establish the testability of models Too often however methodological assumptions can make a model virtually impossible to test even under ideal conditions yet few theorists have examined the requirements and problems of assuring testability in economics In The Methodology of Economic Model Building first published in 1989 Lawrence Boland presents the results of a research project that spanned more than twenty years He examines how economists have applied the philosophy of Karl Popper relating methodological debates about falsifiability to wider discussions about the truth status of models in natural and social sciences He concludes that model building in economics reflects more the methodological prescriptions of the economist Paul Samuelson than Popper's falsificationism This title will prove invaluable to both students and researchers and represents a substantial contribution to debates about the scientific status of economics      **Institutions, Behaviour and Economic Theory** Heinrich Bortis, 1997 This book is about the conceptual foundations of an intermediate way between liberalism and socialism From a standpoint of economic theory this middle way is conceived of as a synthesis of classical Ricardian and Keynesian political economy While the former deals with proportions between individuals or collectives and society in tackling the problems of distribution and value on the basis of the surplus principle the latter is concerned with the scale of economic activity as explained by the principle of effective demand Political economy pictures the economic aspects of the functioning of the institutional system within which the behaviour of individuals is embedded The economy considered is primarily neither a market nor a planned economy but rather a monetary production economy To establish an alternative to liberalism and socialism requires setting up a system of the social sciences In this work suggestions are made for linking political economy with other social sciences i.e. sociology law and politics in the traditional sense thus establishing the unity of the social sciences In a Keynesian vein the social sciences are conceived of as moral sciences a view which gives rise to a specific philosophy of history To complete the picture issues of method associated with the theory of knowledge in the social sciences and the problem of linking theory with historical reality are also covered      The General Economic Theory Wei-Bin Zhang, 2020-08-27 This book develops a general economic theory that integrates various economic theories and ideas and establishes important relationships between economic variables that are not formally recognized in the economic literature The author demonstrates how the basic model is integrated with neoclassical growth theory Walrasian general equilibrium theory and Ricardian distribution theory and how these theories can be incorporated through a single set of equations with a microeconomic basis The book offers new insights into income and wealth distribution between heterogeneous households racial and national differences in

growth and development interdependence between different stock variables with portfolio choices among different markets

It will appeal to scholars of economists interested in an integrative theoretical approach to this discipline     **On the Reliability of Economic Models** Daniel Little,1995-08-31 This volume represents a contribution to the philosophy of economics with a distinctive point of view the contributors have selected particular areas of economics and have probed these areas for the philosophical and methodological issues that they raise The primary essays are written by philosophers concentrating on philosophical issues that arise at the level of the everyday theoretical practice of working economists Commentary essays are provided by working economists responding to the philosophical arguments from the standpoint of their own disciplines The volume thus represents something of an experiment in the philosophy of science striving as it does to explore methodological issues across two research communities The purpose of the volume is very specific to stimulate a discussion of the epistemology and methodology of economics that works at the level of detail of existing best practice in economics today The contributors have designed their contributions to stimulate productive conversation between philosophers and economists on topics in the methodology of economics     **Bayesian Models in Economic Theory** Marcel Boyer,Richard Kihlstrom,1984     *Joan Robinson and Modern Economic Theory* George R. providing rich insights into the complex of urban evolution it uses only a few concepts and simplified functional forms and accepts a few assumptions about the behavior of consumers producers and institutional structures over space

**Dilemmas in Economic Theory : Persisting Foundational Problems of Microeconomics** Michael Mandler Associate Professor of Economics Harvard University,1999-01-29 By examining the development of economics in the 20th century this book argues that the breakthroughs of post WWII general equilibrium theory and its rejection of utilitarianism and marginal productivity have been misunderstood Mandler maintains that although earlier neoclassicism deserved criticism current theory does not adequately address the problems the discarded concepts were designed to solve and that intractable dilemmas therefore appear

*History of Spatial Economic Theory* C. Ponsard,2012-12-06 The concept of space has always been a fundamental element in various branches of knowledge The concept often appears in the evolution of knowledge either as a basis of theory or as a factor in research It is associated more or less directly with all the

history of scientific thought At the level of simple common sense the importance of the concept of space is only equaled by its lack of precision It was part of legend before becoming part of history To indicate the founding of Rome Romulus started by drawing the boundaries locating its landmarks in a discontinuous space after having cut the limits of a continuous space However neither geographical explorations nor mathematico logical speculations have ever completely removed the mystery from the concept of space For all its simple common sense its mystique remains intact The privileged position occupied by the concept of space in the history of science and the vagueness of its meaning in the current use of the term far from constituting a paradox are mutually explanatory Every concept of space is necessarily the result of an abstraction whether the process by which it is reached is through mathematics psychology biology or any other discipline At the level of common knowledge the space time concept is the base upon which are arranged individual experiences It is thus easy to understand how the concept of space can be understood only through an orderly arrangement of these experiences and their integration into a logical scheme
