Models Of Sharing Graphs A Categorical Semantics Of Let And Letrec:

Models of Sharing Graphs Masahito Hasegawa,2012-12-06 Models of Sharing Graphs presents a sound mathematical basis for reasoning about models of computation involving shared resources including graph rewriting systems denotational semantics and concurrency theory An algebraic approach based on the language of category theory is taken throughout this work which enables the author to describe several aspects of the notion of sharing in a systematic way In particular a novel account of recursive computation created from cyclic sharing is developed using this framework **Foundations of Software Science and Computation Structures** Andrew Pitts,2015-03-31 This book constitutes the proceedings of the 18th International Conference on Foundations of Software Science and Computation Structures FOSSACS 2015 held in London UK in April 2015 as part of the European Joint Conferences on Theory and Practice of Software ETAPS 2015 The 28 full papers presented in this volume were carefully reviewed and selected from 93 submissions They are organized in topical sections named semantics of programming languages categorical models and logics concurrent probabilistic and timed systems automata games verification logical aspects of computational complexity and type theory proof theory and implicit computational complexity The book also contains one full paper invited talk *Theoretical Aspects of Computer Software* Martin Abadi,Takayasu Ito,1997-08-27 Content Description Includes bibliographical references and index Network Algebra Gheorghe Stefanescu,2012-12-06 Network Algebra considers the algebraic study of networks and their behaviour It contains general results on the algebraic theory of networks recent results on the algebraic theory of models for parallel programs as well as results on the algebraic theory of classical control structures The results are presented in a unified framework of the calculus of flownomials leading to a sound understanding of the algebraic fundamentals of the network theory The term network is used in a broad sense within this book as consisting of a collection of interconnecting cells and two radically different specific interpretations of this notion of networks are studied One interpretation is additive when only one cell is active at a given time this covers the classical models of control specified by finite automata or flowchart schemes The second interpretation is multiplicative where each cell is always active covering models for parallel computation such as Petri netsor dataflow networks More advanced settings mixing the two interpretations are included as well Network Algebra will be of interest to anyone interested in network theory or its applications and provides them with the results needed to put their work on a firm basis Graduate students will also find the material within this book useful for their studies
