Models Of The Self Consciousness Studies:

  Models of the Self Shaun Gallagher,2013-10-22 A long history of inquiry about human nature and the self stretches from the ancient tradition of Socratic self knowledge in the context of ethical life to contemporary discussions of brain function in cognitive science It begins with a conflict among the ancients On one view which comes to be represented most clearly by Aristotle the issue is settled in terms of a composite and very complex human nature Who I am is closely tied to my embodied existence The other view found as early as the Pythagoreans and developed in the writings of Plato Augustine and Descartes held that genuine humanness is not the result of an integration of lower functions but a purification of those functions in favour of a liberating spirituality The animal elements are excluded from the human essence The modern debate on the problem of the self although owing much to the insights of Locke and Hume can still be situated within the context of the two schools of ancient thought and this has led many to despair over the lack of apparent progress in this problem Today of course we often tend to look to science rather than philosophy to develop our understanding of a wide range of fundamental issues To what extent is the problem of the self a scientific issue Can insights from the study of neuropsychology and cognitive development in infancy provide a new perspective Can the study of schizophrenia and dissociative identity disorders tell us anything about the nature of human self consciousness Many would answer yes to the above questions but then is it not also the case that the study of exceptional self actualised human experience is equally relevant And can the phenomenological tradition dedicated to the systematic study of human experience and contemporary analytic approaches in philosophy help us out of some of the impasses that have bedevilled the empiricist tradition MODELS OF THE SELF includes all these perspectives in an attempt to cast light on one of the most intractable problems in science and the humanities

  Models of the Self Shaun Gallagher,Jonathan Shear,1999 A comprehensive reader on the problem of the self as seen from the perspectives of philosophy development psychology robotics cognitive neuroscience psychopathology semiotics phenomenology and contemplative studies all focused on a keynote paper   **The Structure and Development of Self-consciousness** Dan Zahavi,Thor Grünbaum,Josef Parnas,2004-01-01 Self consciousness is a topic of considerable importance to a variety of empirical and theoretical disciplines such as developmental and social psychology cognitive neuroscience psychiatry and philosophy This volume presents essays on self consciousness by prominent psychologists cognitive neurologists and philosophers Some of the topics included are the infants sense of self and others theory of mind phenomenology of embodiment neural mechanisms of action attribution and hermeneutics of the self A number of these essays argue in turn that empirical findings in developmental psychology phenomenological analyses of embodiment or studies of pathological self experiences point to the existence of a type of self consciousness that does not require any explicit I thought or self observation but is more adequately described as a pre reflective embodied form of self familiarity The different contributions in the volume amply demonstrate that self consciousness is a complex multifaceted phenomenon that

calls for an integration of different complementary interdisciplinary perspectives Series B   The SAGE Handbook of Personality Theory and Assessment Gregory J Boyle,Gerald Matthews,Donald H Saklofske,2008-06-24 This Handbook of Personality Theory and Assessment 2 Volume Set constitutes an essential resource for shaping the future of the scientific foundation of personality research measurement and practice It reviews the major contemporary personality models Volume 1 and associated psychometric measurement instruments Volume 2 that underpin the scientific study of this important area of psychology With contributions from internationally renowned academics this work will be an important reference work for a host of researchers and practitioners in the fields of individual differences and personality assessment clinical psychology educational psychology work and organizational psychology health psychology and other applied fields as well Volume 1 Personality Theories and Models Deals with the major theoretical models underlying personality instruments and covers the following broad topics listed by section heading Explanatory Models For Personality Comprehensive Trait Models Key Traits Psychobiology Key Traits Self Regulation And Stress New Trait And Dynamic Trait Constructs Applications   **Cognitive Models and Spiritual Maps** Jensine Andresen,Robert K. C. Forman,2000 This book throws down a challenge to religious studies offering a multidisciplinary approach including developmental psychology neuropsychology philosophy of mind and anthropology   **The Buddhist Theory of Self-Cognition** Zhihua Yao,2012-09-10 This highly original work explores the concept of self awareness or self consciousness in Buddhist thought Its central thesis is that the Buddhist theory of self cognition originated in a soteriological discussion of omniscience among the Mahasamghikas and then evolved into a topic of epistemological inquiry among the Yogacarins To illustrate this central theme this book explores a large body of primary sources in Chinese Pali Sanskrit and Tibetan most of which are presented to an English readership for the first time It makes available important resources for the study of the Buddhist philosophy of mind   **Handbook of Self and Identity** Mark R. Leary,June Price Tangney,2012-01-01 Widely regarded as the authoritative reference in the field this volume comprehensively reviews theory and research on the self Leading investigators address this essential construct at multiple levels of analysis from neural pathways to complex social and cultural dynamics Coverage includes how individuals gain self awareness agency and a sense of identity self related motivation and emotion the role of the self in interpersonal behavior and self development across evolutionary time and the lifespan Connections between self processes and psychological problems are also addressed New to This Edition Incorporates significant theoretical and empirical advances Nine entirely new chapters Coverage of the social and cognitive neuroscience of self processes self regulation and health self and emotion and hypoegoic states such as mindfulness   The De Gruyter Handbook of Artificial Intelligence, Identity and Technology Studies Anthony Elliott,2024-07-22 The De Gruyter Handbook of Artificial Intelligence Identity and Technology Studies examines the relationship of the social sciences to artificial intelligence surveying the various convergences and divergences between science and technology studies on the one hand and identity transformations on the other It provides representative

coverage of all aspects of the AI revolution from employment to education to military warfare impacts on public policy and governance and the future of ethics How is AI currently transforming social economic cultural and psychological processes This handbook answers these questions by looking at recent developments in supercomputing deep learning and neural networks including such topics as AI mobile technology social robotics big data and digital research It focuses especially on mechanisms of identity by defining AI as a new context for self exploration and social relations and analyzing phenomena such as race ethnicity and gender politics in human machine interfaces *Artificial Consciousness* Antonio Chella,Riccardo Manzotti,2013-10-01 The book is interdisciplinary and focuses on the topic of artificial consciousness from neuroscience to artificial intelligence from bioengineering to robotics It provides an overview on the current state of the art of research in the field of artificial consciousness and includes extended and revised versions of the papers presented at the International Workshop on Artificial Consciousness held in November 2005 at Agrigento Italy **Methodological issues in consciousness research** Antonino Raffone,Axel Cleeremans,Roumen Kirov,Morten Overgaard,Luca Simione,Aviva Berkovich-Ohana,2023-05-31 *Self-awareness* M. D. Ferrari,Robert J. Sternberg,1998-04-17 This integrative volume brings together leading social scientists to present diverse perspectives on the emergence development and practical role of self awareness Shedding light on the fundamental question of how human beings come to understand who we are in relation to ourselves to others and to the broader world the book does justice to the complexity of its subject while remaining accessible to readers in a wide range of disciplines Chapters cover such topics as developmental and evolutionary aspects of self awareness the self consciousness and theory of mind and connections between self awareness and social affective academic and neuropsychological functioning **Reductive Model of the Conscious Mind** Galus, Wieslaw,Starzyk, Janusz,2020-08-21 Research on natural and artificial brains is proceeding at a rapid pace However the understanding of the essence of consciousness has changed slightly over the millennia and only the last decade has brought some progress to the area Scientific ideas emerged that the soul could be a product of the material body and that calculating machines could imitate brain processes However the authors of this book reject the previously common dualism the view that the material and spiritual psychic processes are separate and require a completely different substance as their foundation Reductive Model of the Conscious Mind is a forward thinking book wherein the authors identify processes that are the essence of conscious thinking and place them in the imagined simplified structure of cells able to memorize and transmit information in the form of impulses which they call neurons The purpose of the study is to explain the essence of consciousness to the degree of development of natural sciences because only the latter can find a way to embed the concept of the conscious mind in material brains The book is divided into three parts Part 1 works to convince readers that the emergence of consciousness does not require detailed knowledge of the structure and morphology of the brain with the exception of some specific properties of the neural network structure that the authors attempt to point out Part 2 proves that the biological structure of

many natural brains fulfills the necessary conditions for consciousness and intelligent thinking Similarly Part 3 shows the ways in which artificial creatures imitating natural brains can meet these conditions which gives great hopes for building artificially intelligent beings endowed with consciousness Covering topics that include cognitive architecture the embodied mind and machine learning this book is ideal for cognitive scientists philosophers of mind neuroscientists psychologists researchers academicians and advanced level students The book can also help to focus the research of linguists neurologists and biophysicists on the biophysical basis of postulated information processing into knowledge structures

Neurophysiology of Silence: Neuroscientific, Psychological, Educational and Contemplative Perspectives Tal Dotan Ben-Soussan,Aviva Berkovich-Ohana,Jean-Yves Beziau,Filippo Carducci,Joseph Glicksohn,Narayanan Srinivasan,2021-05-20 **Consciousness Redefined: Exploring the Neural Underpinnings of Self-Awareness** Pasquale De Marco,2025-05-11 Consciousness Redefined Exploring the Neural Underpinnings of Self Awareness is a comprehensive and up to date exploration of the latest scientific research on consciousness In this book Pasquale De Marco examines the different theories about how consciousness works and the evidence for and against each theory Consciousness Redefined Exploring the Neural Underpinnings of Self Awareness also explores the implications of consciousness for our understanding of ourselves and the world around us Consciousness is one of the most important and fascinating mysteries of the human mind and this book provides a clear and accessible introduction to the latest research on this topic Consciousness Redefined Exploring the Neural Underpinnings of Self Awareness is essential reading for anyone who is interested in consciousness the mind or the human experience This book is written in a clear and engaging style and it is accessible to readers of all levels Consciousness Redefined Exploring the Neural Underpinnings of Self Awareness is a valuable resource for students researchers and anyone else who is interested in learning more about consciousness This book provides a comprehensive overview of the latest research on this topic and it is written in a clear and accessible style Consciousness Redefined Exploring the Neural Underpinnings of Self Awareness is a must read for anyone who is interested in the mind and the human experience This book provides a comprehensive and up to date overview of the latest research on consciousness and it is written in a clear and engaging style If you like this book write a review on google books **New Developments in Consciousness Research** Vincent W. Fallio,2007 Consciousness is a quality of the mind generally regarded to comprise qualities such as subjectivity self awareness sentience sapience and the ability to perceive the relationship between oneself and one s environment It is a subject of much research in philosophy of mind psychology neurology and cognitive science This book gathers a compilation of new and significant research on many facets of consciousness research These include memory studies evolution of consciousness paranormal experiences phenomenal consciousness meditation human emotion and psychopathology *Self-Aware Computing Systems* Samuel Kounev,Jeffrey O. Kephart,Aleksandar Milenkoski,Xiaoyun Zhu,2017-01-23 This book provides formal and informal definitions and taxonomies for self aware computing systems and

explains how self aware computing relates to many existing subfields of computer science especially software engineering It describes architectures and algorithms for self aware systems as well as the benefits and pitfalls of self awareness and reviews much of the latest relevant research across a wide array of disciplines including open research challenges The chapters of this book are organized into five parts Introduction System Architectures Methods and Algorithms Applications and Case Studies and Outlook Part I offers an introduction that defines self aware computing systems from multiple perspectives and establishes a formal definition a taxonomy and a set of reference scenarios that help to unify the remaining chapters Next Part II explores architectures for self aware computing systems such as generic concepts and notations that allow a wide range of self aware system architectures to be described and compared with both isolated and interacting systems It also reviews the current state of reference architectures architectural frameworks and languages for self aware systems Part III focuses on methods and algorithms for self aware computing systems by addressing issues pertaining to system design like modeling synthesis and verification It also examines topics such as adaptation benchmarks and metrics Part IV then presents applications and case studies in various domains including cloud computing data centers cyber physical systems and the degree to which self aware computing approaches have been adopted within those domains Lastly Part V surveys open challenges and future research directions for self aware computing systems It can be used as a handbook for professionals and researchers working in areas related to self aware computing and can also serve as an advanced textbook for lecturers and postgraduate students studying subjects like advanced software engineering autonomic computing self adaptive systems and data center resource management Each chapter is largely self contained and offers plenty of references for anyone wishing to pursue the topic more deeply   Practice-Driven Research on Enterprise Transformation Frank Harmsen,Knut Grahlmann,Erik Proper,2011-09-05 This volume constitutes the proceedings of the Third Working Conference on Practice Driven Research on Enterprise Transformation PRET held in Luxembourg on September 6 2010 as the industrial track of the 13th IEEE Conference on Commerce and Enterprise Computing CEC 2011 The third edition of PRET marks a close collaboration between academia and practice With the specific purpose of mutual learning and crossfertilization top practitioners from industry were invited to submit case studies To give them enough space for presentation only four academic papers were accepted These papers were submitted with a length of 25 pages to enable a more detailed coverage of the related research and to stimulate further discussions during the conference The topics covered are Enterprise Architecture Business and IT Alignment and Business Process Management and Evaluation   *Body Representation and Interoceptive Awareness: Cognitive, Affective, and Social Implications* Simona Raimo,Cecilia Guariglia,Liana Palermo,Gabriella Santangelo,Luigi Trojano,Matteo Martini,Federico Nemmi,2022-07-04   **The Oxford Handbook of Social Influence** Stephen G. Harkins,Kipling D. Williams,Jerry M. Burger,2017-07-07 The study of social influence has been central to social psychology since its inception In fact research on social influence predated the coining of

the term social psychology Its influence continued through the 1960s when it made seminal contributions to the beginning of social psychology s golden age However by the mid 1980s interest in this area waned while at the same time and perhaps not coincidentally interest in social cognition waxed Now the pendulum is swinging back as seen in growing interest in non cognitive motivational accounts The Oxford Handbook of Social Influence will contribute to a resurgence of interest in social influence that will restore it to its once preeminent position Written by leading scholars the chapters cover a variety of topics related to social influence incorporating a range of levels of analysis intrapersonal interpersonal and intragroup and both source the influencers and target the influenced effects The volume also examines theories that are most relevant to social infl uence as well as social influence in applied settings The chapters contribute to the renaissance of interest in social influence by showing that it is time to reexamine classic topics in social influence by illustrating how integrations elaborations that advance our understanding of social influence processes are now possible by revealing gaps in the social influence literature and by suggesting future lines of research Perhaps the most important of these lines of work will take into account the change from traditional social influence that occurs face to face to social media mediated influence that is likely to characterize many of our interactions in the future   Consciousness Studies K. Ramakrishna Rao,2015-09-17 Consciousness is perplexing too familiar and intimate to ignore too complex and elusive to understand Although consciousness is embedded in all our experience and is considered basic to all our knowing no one seems to know what exactly it is and the concept is both widely used and much abused For the better part of the twentieth century the study of consciousness was viewed as unworthy of scholarly and scientific pursuit Research has consequently suffered This cross cultural examination first explores the varieties of conscious experience and reflects on the attempts to understand and explain consciousness in the Western scholarly and scientific tradition The next section deals with Eastern spiritual traditions and how they differ with and complement the Western viewpoints In the final chapters the author reconciles the two traditions for a comprehensive understanding of what consciousness is and considers how such an understanding may be helpful for a cross cultural assessment of behavior as well as for enhancing human abilities and wellness
