Models of Discovery Herbert A. Simon,2012-12-06 We respect Herbert A Simon as an established leader of empirical and logical analysis in the human sciences while we happily think of him as also the loner of course he works with many colleagues but none can match him He has been writing fruitfully and steadily for four decades in many fields among them psychology logic decision theory economics computer science management production engineering information and control theory operations research confirmation theory and we must have omitted several With all of them he is at once the technical scientist and the philosophical critic and analyst When writing of decisions and actions he is at the interface of philosophy of science decision theory philosophy of the specific social sciences and inventory theory itself for him at the interface of economic theory production engineering and information theory When writing on causality he is at the interface of methodology metaphysics logic and philosophy of physics systems theory and so on Not that the interdisciplinary is his orthodoxy we are delighted that he has chosen to include in this book both his early and little appreciated treatment of straightforward philosophy of physics the axioms of Newtonian mechanics and also his fine papers on pure confirmation theory   Models of discovery and other topics in the methods of science Herbert Alexander Simon,1979   **Model-Based Reasoning in Science and Technology** Lorenzo Magnani,2013-08-31 This book contains contributions presented during the international conference on Model Based Reasoning MBR 012 held on June 21 23 in Sestri Levante Italy Interdisciplinary researchers discuss in this volume how scientific cognition and other kinds of cognition make use of models abduction and explanatory reasoning in order to produce important or creative changes in theories and concepts Some of the contributions analyzed the problem of model based reasoning in technology and stressed the issues of scientific and technological innovation The book is divided in three main parts models mental models representations abduction problem solving and practical reasoning historical epistemological and technological issues The volume is based on the papers that were presented at the international   **Artificial Intelligence Models for the Dark Universe** Ariel Fernández,2024-08-20 The dark universe contains matter and energy unidentifiable with current physical models accounting for 95% of all the matter and energetic equivalent in the universe The enormous surplus brings up daunting enigmas such as the cosmological constant problem and the apparent distortions in the dynamics of deep space and so coming to grips with the invisible universe has become a scientific imperative This book addresses this need reckoning that no cogent physical model of the dark universe can be implemented without first addressing the metaphysical hurdles along the way The foremost problem is identifying the topology of the universe which as argued in the book is highly relevant to unveil the secrets of the dark universe Artificial Intelligence AI is a valuable tool in this effort since it can reconcile conflicting data from deep space with the extant laws of physics by building models to decipher the dark universe This book explores the applications of AI and how it can be used to embark on a metaphysical quest to identify the topology of the universe as a prerequisite to implement a

physical model of the dark sector that enables a meaningful extrapolation into the visibile sector The book is intended for a broad readership but a background in college level physics and computer science is essential The book will be a valuable guide for graduate students as well as researchers in physics astrophysics and computer science focusing on AI applications to elucidate the nature of the dark universe Key Features Provides readers with an intellectual toolbox to understand physical arguments on dark matter and energy Up to date with the latest cutting edge research Authored by an expert on artificial intelligence and mathematical physics **Education in the Digital Era: Channels for Confrontations** G.
