Models of Human Memory Donald A. Norman, 2013-10-22 Models of Human Memory provides an overview of the state of knowledge on human memory models. The book begins with an introductory chapter on the basic stages of the memory system and the historical roots of memory models. The remaining chapters are organized into five parts. Part I on memory systems covers topics such as a system for perception and memory, multi-trace strength theory of memory, and a model for postperceptual verbal memory that postulates a single memory store with multiple copies called replicas created in memory by rehearsal processes. Part II presents studies on phoneme storage and word recognition. Part III on memory for associations examines the storage-retrieval theory for the memorizing processes and presents a simple model of short term memory (STM) for paired associates. Part IV on storage and retrieval mechanisms deals with mechanisms of repetition and rehearsal in short term memory models of recall and recognition and memory search models. Part V presents a theory of human long term associative memory and examines conceptual and methodological interactions between information processing, investigations of cognitive activity, and attempts to build models of memory.

Short-term/working Memory Ian Neath, Gordon D. A. Brown, Claudette Fortin, 1999 This special issue of the International Journal of Psychology had its origins in the Quebec 98 Conference on Short Term Memory held in Quebec City, Canada, in June 1998. Following this conference, participants were invited to submit contributions based on and expanding upon their presentation at this conference. The enthusiastic response made it possible to collect the exciting selection of articles that you will find herein. It must be noted that because of the finite journal space available, the editors and reviewers were faced with the difficult problem of selecting

only a limited number of the excellent articles that were submitted The outcome of this process is this special issue which we believe provides an up to date overview of current research on short term working memory including the challenges controversies and recent theoretical advances in this field Short-term and Working Memory Susan E. Gathercole,2001 This special issue ponders a detailed and contemporary analysis of the theoretical underpinnings of short term and working memory Articles focus on short term memory for phonological semantic and spatial material on executive function and on short term forgetting The empirical perspectives include the neuroimaging of short term memory short term memory development and the neuropsychology and neurobiology of memory in addition to laboratory based experimental studies Together these articles identify significant current models and approaches to short term and working memory providing a broad set of perspectives which illustrate the wide impact of working memory on the understanding of human cognition

Bjork,1969 The paper presents a theoretical discussion of the probable general mechanisms of repetition and rehearsal in short term memory It points out the implications of the various mechanisms and evaluates their relative adequacies It examines questions on the representation of rehearsal in models for short term memory Author *Models of Thought* Herbert Alexander Simon,1979-01-01 Nobel Laureate Herbert A Simon has in the past quarter century been in the front line of the information processing revolution in fact to a remarkable extent his and his colleagues contributions have written the history of that revolution in cognitive psychology Research in this burgeoning new branch of knowledge seeks to describe with precision the workings of the human mind in terms of a small number of basic mechanisms organized into strategies Newly developed computer languages express theories of mental processes so that computers can then simulate the predicted human behavior This book brings together papers dating from the start of Simon s career to the present Its focus is on modeling the chief components of human cognition and on testing these models experimentally After considering basic structural elements of the human information processing system especially search selective attention and storage in memory Simon builds from these components a system capable of solving problems inducing rules and concepts perceiving and understanding These essays describe a relatively austere simple and unified processing system capable of highly complex and various tasks They provide strong evidence for an explanation of human thinking in terms of basic information processes Cognitive Psychology Michael W. The Symbolic and Connectionist Paradigms John Dinsmore, 2014-01-14 The modern study of cognition finds itself with two widely endorsed but seemingly incongruous theoretical paradigms The first of these inspired by formal logic and the digital computer sees reasoning in the principled manipulation of structured symbolic representations The second inspired by the physiology of the brain sees reasoning as the behavior that emerges from the direct interactions found in large networks of simple processing components Each paradigm has its own accomplishments problems methodology proponents and agenda This book records the thoughts of researchers from both computer science and philosophy on resolving the debate between the symbolic and connectionist paradigms It addresses theoretical and methodological issues throughout but at the same time exhibits the current attempts of practicing cognitive scientists to solve real problems
