Algorithms for Computer Algebra Keith O. Geddes, Stephen R. Czapor, George Labahn, 1992-09-30 Algorithms for Computer Algebra is the first comprehensive textbook to be published on the topic of computational symbolic mathematics The book first develops the foundational material from modern algebra that is required for subsequent topics It then presents a thorough development of modern computational algorithms for such problems as multivariate polynomial arithmetic and greatest common divisor calculations factorization of multivariate polynomials symbolic solution of linear and polynomial systems of equations and analytic integration of elementary functions Numerous examples are integrated into the text as an aid to understanding the mathematical development The algorithms developed for each topic are presented in a Pascal like computer language An extensive set of exercises is presented at the end of each chapter Algorithms for Computer Algebra is suitable for use as a textbook for a course on algebraic algorithms at the third year fourth year or graduate level Although the mathematical development uses concepts from modern algebra the book is self contained in the sense that a one term undergraduate course introducing

students to rings and fields is the only prerequisite assumed The book also serves well as a supplementary textbook for a traditional modern algebra course by presenting concrete applications to motivate the understanding of the theory of rings and fields

Modern Computer Algebra, Third Edition Joachim von zur Gathen, Jürgen Gerhard, 2013 *Modern Computer Arithmetic* Richard P. Brent, Paul Zimmermann, 2010-11-25 Modern Computer Arithmetic focuses on arbitrary precision algorithms for efficiently performing arithmetic operations such as addition multiplication and division and their connections to topics such as modular arithmetic greatest common divisors the Fast Fourier Transform FFT and the computation of elementary and special functions Brent and Zimmermann present algorithms that are ready to implement in your favourite language while keeping a high level description and avoiding too low level or machine dependent details The book is intended for anyone interested in the design and implementation of efficient high precision algorithms for computer arithmetic and more generally efficient multiple precision numerical algorithms It may also be used in a graduate course in mathematics or computer science for which exercises are included These vary considerably in difficulty from easy to small research projects and expand on topics discussed in the text Solutions to selected exercises are available from the authors

Computer Algebra Handbook Johannes Grabmeier, Erich Kaltofen, Volker Weispfenning, 2012-12-06 Two ideas lie gleaming on the jeweler's velvet The first is the calculus the second the algorithm The calculus and the rich body of mathematical analysis to which it gave rise made modern science possible but it has been the algorithm that has made possible the modern world David Berlinski The Advent of the Algorithm First there was the concept of integers then there were symbols for integers I II III 1 1 1 1 fttt what might be called a sticks and stones representation I II III IV V Roman numerals 1 2 3 4 5 Arabic numerals etc Then there were other concepts with symbols for them and algorithms sometimes for manipulating the new symbols Then came collections of mathematical knowledge tables of mathematical computations theorems of general results Soon after algorithms came devices that provided assistance for carrying out computations Then mathematical knowledge was organized and structured into several related concepts and symbols logic algebra analysis topology algebraic geometry number theory combinatorics etc This organization and abstraction lead to new algorithms and new fields like universal algebra But always our symbol systems reflected and influenced our thinking our concepts and our algorithms

MuPAD Tutorial Christopher Creutzig, Walter Oevel, 2013-12-01 This book explains the basic use of the software package called MuPAD and gives an insight into the power of the system MuPAD is a so called computer algebra system which is developed mainly by Sciface Software and the MuPAD Research Group of the University of Paderborn in Germany This introduction addresses mathematicians engineers computer scientists natural scientists and more generally all those in need of mathematical computations for their education or their profession

Generally speaking this book addresses anybody who wants to use the power of a modern computer algebra package There are two ways to use a computer algebra system On the one hand you may use the mathematical knowledge it incorporates by calling system functions interactively For example you can compute symbolic integrals or generate and invert matrices by calling appropriate functions They comprise the system's mathematical intelligence and may implement sophisticated algorithms Chapters 2 through 15 discuss this way of using MuPAD On the other hand with the help of MuPAD's programming language you can easily add functionality to the system by implementing your own algorithms as MuPAD procedures This is useful for special purpose applications if no appropriate system functions exist Chapters 16 through 18 are an introduction to programming in MuPAD

Artificial Intelligence and Symbolic Mathematical Computing Jacques Calmet, John A. Campbell, 1993-10-05 This volume contains the papers updated in some cases presented at the first AISMC Artificial Intelligence and Symbolic Mathematical Computations conference held in Karlsruhe August 3-6 1992 This was the first conference to be devoted to such a topic after a long period when SMC made no appearance in AI conferences though it used to be welcome in the early days of AI Some conferences were held recently on mathematics and AI but none was directly comparable in scope to this conference Because of the novelty of the domain authors were given longer allocations of time than usual in which to present their work As a result extended and fruitful discussions followed each paper The introductory chapter in this book which was not presented during the conference reflects in many ways the flavor of these discussions and aims to set out the framework for future activities in this domain of research In addition to the introduction the volume contains 20 papers

New Computing Techniques In Physics Research II - Proceedings Of The Second International Workshop On Software Engineering Artificial Intelligence And Expert Systems In High Energy And Nuclear Physics Denis Perret-gallix, 1992-09-04 A vivid example of the growing need for frontier physics experiments to make use of frontier technology is in the field of Artificial Intelligence AI and related themes By AI we are referring here to the use of computers to deal with complex objects in an environment based on specific rules Symbolic Manipulation to assist groups of developers in the design coding and maintenance of large packages Software Engineering to mimic human reasoning and strategy with knowledge bases to make a diagnosis of equipment Expert Systems or to implement a model of the brain to solve pattern recognition problems Neural Networks These techniques developed some time ago by AI researchers are confronted by down to earth problems arising in high energy and nuclear physics However similar situations exist in other big sciences such as space research or plasma physics and common solutions can be applied The magnitude and complexity of the experiments on the horizon for the end of the century clearly call for the application of AI techniques Solutions are sought through international collaboration between research and industry

The Didactical Challenge of Symbolic

Calculators Dominique Guin, 2005 While computational technologies are transforming the professional practice of mathematics as yet they have had little impact on school mathematics This pioneering text develops a theorized analysis of why this is and what can be done to address it It examines the particular case of symbolic calculators equipped with computer algebra systems in secondary education Drawing on a substantial program of French innovation and research as well as closely related studies from Australia and the Netherlands it provides rich illustrations of the many aspects of technology integration and of the ways in which these are shaped at different levels of the educational institution This text offers the first English language exposition of how an innovative synthesis of the theories of instrumentation and didactics can be used to illuminate the complexities of technology integration It offers important guidance for policy and practice through its analysis of the central role of the teacher and its identification of key principles for effective didactical design and management These distinctive features make this book essential reading for researchers teacher educators and graduate students in mathematics education and technology in education as well as for teachers of mathematics at upper secondary and university levels This is a revised English language edition of D Guin L Trouche Eds 2002 *Calculatrices symboliques Transformer un outil en un instrument de travail mathématique un problème didactique* Editions La Pensée Sauvage Grenoble

Wright, 2001-09-27 Powerful flexible easy to use small wonder that the use of MAPLE continues to increase particularly since the latest releases of MAPLE The built in nature of its numerical and graphical facilities gives MAPLE a distinct advantage

over traditional programming languages yet to date no textbook has used that advantage to introduce programming concepts Moreover few books based on MAPLE s latest versions even exist Computing with MAPLE presents general programming principles using MAPLE as a concrete example of a programming language The author first addresses the basic MAPLE functions accessible for interactive use then moves to actual programming discussing all of the programming facilities that MAPLE provides including control structures data types graphics spreadsheets text processing and object oriented programming Reflecting MAPLE s primary function as a computational tool the book s emphasis is on mathematical examples and it includes a full chapter devoted to algebraic programming Classroom tested since 1995 the material in Computing with MAPLE is particularly appropriate for an intermediate level introductory course in programming for both mathematics and computing students It includes numerous exercises and test questions with MAPLE worksheets contact information and supplementary material available on the Internet
