Modern Man Looks At Evolution:

Modern Humans John F. Hoffecker, 2017-10-31 Modern Humans is a vivid account of the most recent and perhaps the most important phase of human evolution the appearance of anatomically modern people Homo sapiens in Africa less than half a million years ago and their later spread throughout the world Leaving no stone unturned John F Hoffecker demonstrates that Homo sapiens represents a major transition in the evolution of living systems in terms of fundamental changes in the role of non genetic information Modern Humans synthesizes recent findings from genetics including the rapidly growing body of ancient DNA the human fossil record and archaeology relating to the African origin and global dispersal of anatomically modern people Hoffecker places humans in the broad context of the evolution of life emphasizing the critical role of genetic and non genetic forms of information in living systems as well as how changes in the storage transmission and translation of information underlie major transitions in evolution He also draws on information and complexity theory to explain the emergence of Homo sapiens in Africa several hundred thousand years ago and the rapid and unprecedented spread of our species into a variety of environments in Australia and Eurasia including the Arctic and Beringia beginning between 75 000 and 60 000 years ago This magisterial work will appeal to all with an interest in the ever fascinating field of human evolution

McCall,2016-06-16 This fascinating volume assessing Lower and Middle Pleistocene African prehistory argues that the onset of the Middle Stone Age marks the origins of landscape use patterns resembling those of modern human foragers Inaugurating a paradigm shift in our understanding of modern human behavior Grant McCall argues that this transition related to the origins of home base residential site use occurred in mosaic fashion over the course of hundreds of thousands of years He concludes by proposing a model of brain evolution driven by increasing subsistence diversity and intensity against the backdrop of larger populations and Pleistocene environmental unpredictability McCall argues that human brain size did not arise to support the complex patterns of social behavior that pervade our lives today but instead large human brains were co opted for these purposes relatively late in prehistory accounting for the striking archaeological record of the Upper Pleistocene **The Human Condition** Stefan Wurm,2020-03-10 Over a very short period only a few hundred years

Creation vs. Evolution Frederick Guttman, In the last two centuries a powerful war has begun against all classes that call themselves theists Clearly the Catholic occultism of 14 centuries left strong meya especially in Europe The Inquisition that is the persecutions the murders the arbitrariness the robberies and the monopoly of Rome arrived even at the dawn of the Second World War but the worst damage caused by them was to make the world see in Catholicism the representative image of God and as such a great hatred was created for everything related to religion We know that Catholicism was born in the year 325 AD in the days of Constantine but the religious dictatorship was not born there because 3 centuries later another pioneer revived religious wars putting them at the level of battle lines Between Islam and Catholicism they led the
