The Soviet Weapons Industry, 1986 **The Changing Face of Aerial Warfare** Anthony Tucker-Jones, 2018-10-29 Can air power alone win a war That has been the question since the Second World War Air attacks failed miserably in Vietnam Operation Linebacker had little effect while bombing Hanoi just increased hatred for America yet air strikes in both Iraq and Libya helped bring about regime changes No fly zones may have worked in the Balkans but they might as well not have been there for Saddam Hussein's Iraq From the Luftwaffe's massed attack on Britain to NATO's interventions in Libya aerial warfare has changed almost beyond recognition The piston engine has been replaced by the jet and in some cases the pilot has been completely replaced by the microchip Carpet bombing is now a global positioning system and laser pinpointed strikes using precision guided munitions Whereas a bomber's greatest enemies were once fighters and flak the threats have now morphed into smart missiles from half a world away In this compelling study celebrated defence expert Anthony Tucker Jones charts the remarkable evolution of aerial warfare from 1940 to the present day **Military Thought**, 1998

Chinese Aerospace Power Lyle J Goldstein, Andrew S. Erickson, 2012-04-30 China's aircraft carrier program is making major waves well before the first ship has been completed Undoubtedly this development heralds a new era in Chinese national security policy While the present volume presents substantial new insight on that particular question its focus is decidedly broader in scope Chinese Aerospace Power offers a comprehensive survey of Chinese aerospace developments with a focus on areas of potential strategic significance previously unexplored in Western scholarship The book also links these developments to the vast maritime battlespace of the Asia Pacific region and highlights the consequent implications for the U S military particularly the U S Navy **Contemporary Issues Shaping China's Civil Aviation Policy** Alan Williams, 2016-05-13 The emergence of China as a future major participant in international aviation raises some interesting questions especially from a strategic policy perspective The progressive shift from a command to a mixed market economy under the central leadership of the Beijing administration now finds itself faced with the needs to balance a strategic duality in the context of the role of China's civil aviation industry In a very real sense this situation requires the design and accommodation of a growing role for China's mainstream carriers within the operational context of the need to meet the complex challenges from increasing international market competition In parallel with such major external pressures central

government must also accommodate domestic priorities with regard to internal economic development. The fruits of economic progress as a function of market reform are commonly understood to have positively reshaped the lives of only a proportion of the national population to date. The need to create greater access to economic growth for the more remote western and northern provinces has required that the rapid development of airports become a factor in the planning and allocation of developmental priorities. To complicate matters further, prevailing requirements of airspace defence remain a major parameter within the larger context of national aviation policy. This book explores the political, economic and strategic issues raised by the inevitable tension between the domestic and international aspects of Beijing's current civil aviation strategy. It also seeks to identify some of the problems that face the industry as a key sector in the larger context of macroeconomic reform and the further pressures now being exerted by China's membership of the WTO.

The Man Who Took the Rap Peter John Dye, 2018-10-15. This is the first biography of Sir Robert Brooke Popham, a key figure in the early development of airpower whose significant and varied achievements have been overlooked because of his subsequent involvement in the fall of Singapore. It highlights Brooke Popham's role in developing the first modern military logistic system, the creation of the Royal Air Force Staff College and the organizational arrangements that underpinned Fighter Command's success in the Battle of Britain. Peter Dye challenges longstanding views about performance as Commander in Chief Far East and, based on new evidence, offers a more nuanced narrative that sheds light on British and Allied preparations for the Pacific War, inter-service relations and the reasons for the disastrous loss of air and naval superiority that followed the Japanese attack. *The Man Who Took the Rap* highlights the misguided attempts at deterrence in the absence of a coordinated information campaign and the unprecedented security lapse that betrayed the parlous state of the Allied defenses.
