the impact of cultural factors on the course of military innovations One would expect that countries accustomed to similar technologies would undergo analogous changes in their perception of and approach to warfare However the intellectual history of the Revolution in Military Affairs RMA in Russia the US and Israel indicates the opposite The US developed technology and weaponry for about a decade without reconceptualizing the existing paradigm about the nature of warfare Soviet new theory of victory represented a conceptualization which chronologically preceded technological procurement Israel was the first to utilize the weaponry on the battlefield but was the last to develop a conceptual framework that acknowledged its revolutionary implications Utilizing primary sources that had previously been completely inaccessible and borrowing methods of analysis from political science history anthropology and cognitive psychology this book suggests a cultural explanation for this puzzling transformation in warfare The Culture of Military Innovation offers a systematic thorough and unique analytical approach that may well be applicable in other perplexing strategic situations Though framed in the context of specific historical experience the insights of this book reveal important implications related to conventional subconventional and nonconventional security issues It is therefore an ideal reference work for practitioners scholars teachers and students of security studies
