Oncogene Handbook:

The Oncogene Handbook E. Premkumar Reddy, Anna M. Skalka, Tom Curran, 1988 The field of Molecular Oncology has emerged in the last decade as an amalgamation of four of the foremost disciplines in cancer research retrovirology chemical carcinogenesis cytogenetics and cell growth regulation The subject matter for this book forms the unifying factor for these four areas Although the field of Molecular Oncology is still comparatively young the technical vocabulary can be bewildering to the uninitiated This book is clear in its divisions grouping oncogenes by biochemical activity or cellular localization the large group of tyrosine kinases are compared by relevant features The Oncogene Handbook allows ready access and supplies excellent cross referencing An outstanding reference work giving basic information on each oncogene in a concise and uniform format The fundamental importance of the subject area and its medical implications both reflected in The Oncogene Handbook provide students scientists in other fields and clinicians with a very useful manual The Oncogene Handbook Robin Hesketh, 1994 In recent years there has been an audible clamour for a comprehensive digest of the vast and exciting literature on the molecular biology of cancer The Oncogene Handbook fulfills this need providing a definitive guide to the facts about the genes involved in cancer This compendium summarizes the clinical association and molecular properties of all known oncogenes and tumour suppressor genes providing instant access to information on any particular facet of the gene of protein Data covering gene structure and location mRNA size and the half life mass cellular and tissue location protein structure and function sequence databank file name and accession number is clearly and logically presented This vital reference work will provide the understanding that will fuel further progress in this field and will be an invaluable resource for research workers and clinicians as well as senior undergraduates and pre clinical students with an interest in carcinogenesis Robin Hesketh is a member of the Department of Biochemistry University of Cambridge where his principal research interest is in the control of eukaryotic cell growth He was previously a staff member of the National Institute for Medical Research London and has also worked in North America Australia and at the European Molecular Biology Laboratory at Heidelberg **A SHORT HAND BOOK ON ONCOGENES ONCOGENES-AT A GLANCE** Dr. Noopur Kulkarni, The Oncogene and Tumour Suppressor Gene Factsbook Robin Hesketh, 1997-07-11 The Second Edition of The Oncogene and Tumour Suppressor Gene FactsBook has been completely revised updated and expanded by 60% The book contains more than 80 entries on oncogenes including JUN MYC and RAS as well as DNA tumour viruses tumour suppressor genes including p53 retinoblastoma BRCA1 BRCA2 VHL F2FL and essential material on angiogenesis and metastasis apoptosis cell cycle control and gene therapy Includes much new data on this fast moving field including newly discovered oncogenes Summarizes the clinical association and molecular properties of all known oncogenes and tumor suppression genes Contains more than 2000 terms for reference and further research Revised to included signaling pathways apoptosis and metastasis *Oncogenes* Geoffrey M. Cooper, 1995 The second edition of this authoritative text details major advances

and developments in the field such as the identification of many new tumor suppressor genes and the striking progress in understanding signal transduction pathways leading to cell proliferation. *Oncogenes* Second Edition addresses the needs of advanced undergraduates, graduate students, medical students, physicians, and scientists by examining the current state of oncogene study and where future research may lead. *Annual Report* National Cancer Institute (U.S.). Division of Cancer Etiology, 1987

The FOS and JUN Families of Transcription Factors Peter E. Angel, Peter Herrlich, 2017-11-22 This book introduces and analyzes the crucial role of AP 1 in cell growth, proliferation, differentiation, and apoptosis. AP 1 is the endpoint of several pathways of signal transduction, including one that triggers cancerous growth. The control of its activity is an issue of basic science, cancer therapy, and other diseases. The chapters provide multiple viewpoints of the emerging data on AP 1, including its role as a factor regulating genes involved in the metastatic properties of cancer, as a factor that interacts with viral gene products, and as a part of the mechanism by which steroid and retinoic acid receptors function as anti-inflammatory proteins.

Growth Factors, Differentiation Factors, and Cytokines Andreas Habenicht, 2012-12-06 Leading international experts contribute to this selection of reviews covering the merging fields of growth factors, differentiation factors, and cytokines. These appear to play fundamental roles in a wide variety of physiological and pathophysiological processes that include the regulation of growth in normal and malignant cells, embryogenesis, the immune response, wound healing, inflammation, and atherogenesis. The major aspects of recent research and development are discussed, providing an important update in this pioneering field.

Chemical Induction of Cancer Joseph C. Arcos, Mary F. Argus, Yin-tak Woo, 2012-12-06 In the approach to the analysis of disease, including of course cancer, two major thrusts may be distinguished. These may be referred to in shorthand as agents and processes: the causative agents (chemical, microbial, physical, environmental, and psychosocial) and the organismic processes initiated and furthered by the agents, culminating in observable pathology at the macromolecular, cytological, histological, organ function, locomotor, and behavioral levels. The past 25 years, since the appearance of the first volume of the predecessor series, 1, authored by the Editors of this present volume, have seen an impressive number of studies on chemicals and other agents as etiologic factors in the induction of cancer. The major emphasis has been on the discovery of many chemical carcinogens of widely different structures, their metabolism by various tissues and cells, and in turn their molecular biochemical effects on the cells. This rapidly expanded body of information, as effectively covered in the predecessor volumes, is an excellent entree to the second half of the overall problem of chemical carcinogenesis: the processes. The active agents trigger a large array of molecular biochemical alterations to which the target cells, target tissues, and target organisms respond in many select and common ways. This second major aspect of the induction of cancer by chemicals and by other agents, the sequence of cellular and tissue changes clearly relevant to cancer, remains the challenge for the future.

Molecular Diagnostics of Cancer Christoph Wagener, Siegfried Neumann, 2012-12-06 Present and potential future applications of new diagnostic strategies based on the direct or indirect

detection of cancer genes are delineated in this volume Among the methodological aspects covered are enzymatic target amplification by the polymerase chain reaction and related techniques DNA fingerprinting transfer of putative cancer genes in appropriate recipient cells and recent developments in the application of monoclonal antibodies in immunohistochemistry and immunoscintigraphy The diagnostic and functional implications of mutations in cancer genes such as ras and p53 are described The characterization of cancer genes and their products is correlated with growth control and dissemination of tumour cells by in vitro or clinical evidence The contributions in the present volume update the information available on established or newly described cancer genes and may help manage the transition from basic research to clinical practice

Vectors as Tools for the Study of Normal and Abnormal Growth and Differentiation Heinz Lother, Rudolf Dernick, Wolfram Ostertag, 2013-06-29 Proceedings of the NATO Advanced Research Workshop on Vectors for Transfer and Expression of Genes held in Wilsede FRG October 21-24 1988 on the Occasion of the 40th Anniversary of the Heinrich Pette Institut für Experimentelle Virologie und Immunologie an der Univ Hamburg **Cancer** Robert A. Meyers, 2007-07-31 With an editorial board containing 11 Nobel laureates this invaluable collection of high quality articles on cancer biology is taken from the highly acclaimed R A Meyer's Encyclopedia Clearly divided into three main sections this ready reference covers molecular mechanisms organ specific cancers as well as diagnostic and therapeutic approaches The articles are uniformly structured for ease of use carefully designed to aid readers of all levels of expertise To this end each chapter includes a glossary of the most important keywords a concise summary of the article and comprehensive literature references

Mechanisms in B-Cell Neoplasia 1990 Michael Potter, Fritz Melchers, 2013-03-12 The eighth workshop in this series on Mechanisms in B Cell Neoplasia 1990 was held in Wilson Hall at the National Institutes of Health Bethesda Maryland on March 28-30 Five major topics formed the basis for the discussions 1 progress in experimental models of B cell tumorigenesis 2 the role of IL 6 in plasma cell tumor formation with particular emphasis on human myeloma 3 immortalization and regulation of mitosis in B cells 4 the MYC gene in B cell neoplasia and 5 the role of EBV and other oncogenes in transformation of human B lymphocytes A meeting on the Epidemiology of Myeloma was held at the N I H on the preceding day and many of those interested in the clinical aspects of myeloma were also participants at the workshop Experimental Models of B Cell Tumor Development We have seen in the last eight years the steady growth of model experimental systems many of which have been designed to be counterparts of the major forms of human B cell tumors e g follicular lymphomas Burkitt's lymphomas acute B cell leukemia and multiple myeloma A variety of novel ways of inducing these tumors has been described Advantage has been taken of the experiments in nature to identify critical genes that play a role in tumor pathogenesis These genes have been identified by being near to viral insertion and chromosomal translocation sites or by having been incorporated or transduced into a defective transforming retrovirus **The ras Superfamily of GTPases (1993)** Juan

Carlos Lacal, Frank Patrick McCormick, 2017-11-22 The ras Superfamily of GTPases presents the most comprehensive compilation of information available regarding aspects of the putative function of small ras related GTPases The book's chapters were written by the world's most prominent scientists in this field and cover such topics as the structure and properties of ras proteins ras function the ras superfamily in general and the functional regulation of ras and ras related GTPases The book will benefit cell biologists oncologists neurobiologists molecular biologists and others interested in the topic

Vascular Endothelial Growth Factor Receptors—Advances in Research and Application: 2013 Edition, 2013-06-21 Vascular Endothelial Growth Factor Receptors Advances in Research and Application 2013 Edition is a ScholarlyPaper that delivers timely authoritative and intensively focused information about ZZZAdditional Research in a compact format The editors have built Vascular Endothelial Growth Factor Receptors Advances in Research and Application 2013 Edition on the vast information databases of ScholarlyNews You can expect the information about ZZZAdditional Research in this book to be deeper than what you can access anywhere else as well as consistently reliable authoritative informed and relevant The content of Vascular Endothelial Growth Factor Receptors Advances in Research and Application 2013 Edition has been produced by the world's leading scientists engineers analysts research institutions and companies All of the content is from peer reviewed sources and all of it is written assembled and edited by the editors at ScholarlyEditions and available exclusively from us You now have a source you can cite with authority confidence and credibility More information is available at <http://www.ScholarlyEditions.com>

Molecular Neuro-oncology and Its Impact on the Clinical Management of Brain Tumors O.D. Wiestler, U. Schlegel, J. Schramm, 2012-12-06 Tumors of the nervous system represent a difficult therapeutic challenge During recent years substantial progress has been made in characterizing genetic mechanisms involved in the formation of brain tumors There is a lot of hope that an understanding of the molecular basis of transformation will eventually lead to specific therapeutic approaches In this volume leading authorities in both molecular and clinical neuro oncology summarize recent developments in their respective fields The first part of the book will focus on specific molecular genetic defects in neural tumors and their potential clinical significance Part two gives an update on established and novel treatment regimens for patients with brain tumors Several contributions will demonstrate that molecular and clinical neuro oncology are already entangled With its unique combination of molecular biological and clinical data this volume provides basic researchers and clinical neuroscientists with a comprehensive update in both disciplines

Osteosarcoma in Adolescents and Young Adults: New Developments and Controversies G. Bennett Humphrey, H. Schraffordt Koops, W.M. Molenaar, A. Postma, 2012-12-06 Osteosarcoma in Adolescents and Young Adults New Developments and Controversies is the fifth volume in the series Cancer Treatment and Research devoted to pediatric oncology Like its immediate predecessor Hodgkin's Disease in Children Controversies and Current Practice this volume also deals with the current state of affairs where do researchers differ in opinions or firmly held beliefs What does the future hold for research

or for the patients who have benefited from research and are now cured etc The first part deals with preclinical and clinical issues that relate to the disease and the second part deals with the results of recent trials and in some cases ongoing trials It could be argued that section B Pharmacology Section D Radiotherapy and Section E Surgery of part one belong to part two however in these sections we have tried to focus on one discipline and in part two we have tried to focus on the results of multidisciplinary trials A third part includes a few critiques and editorial comments This volume was prepared and planned for both basic and clinical oncologists It is hoped that the basic scientists will gain some insight into the problems of their clinical colleagues and that the clinicians will be willing to read to the more basic articles It is not a text for students or for that matter physicians who want all things to be laid out in black and white But it is a text for those students who want to know how vibrant this field of research is and are willing to stand in awe of how much research needs to be done

Developmental Biology and Cancer Gisele M. Hodges, Charles Rowlatt, 1993-09-27 This book addresses possible analogies between cancer and developmental biology An international group of experts provides a multidisciplinary approach allowing biological or clinical scientists involved with cancer research to integrate specific information from diverse areas Five concepts of cancer are presented and developmental biology is reviewed at five levels These are integrated in discussions of failure in organisation as a basis of cancer and its control The book will be a valuable reference for both newcomers as well as experienced biological and clinical scientists Features Molecular And Cellular Approaches To The Control Of Proliferation And Differentiation Gary Stein, 2012-12-02 Molecular and Cellular Approaches to the Control of Proliferation and Differentiation focuses on molecular and cellular approaches used to control cell proliferation and differentiation This book discusses the basic mechanisms involved in the regulation of cell growth emphasizing the coupling of proliferation and the progressive expression of several specific cellular phenotypes This text is organized into three sections encompassing 12 chapters and begins with an introduction to cell proliferation and how it is regulated by growth factors and nuclear protooncogenes in cell proliferation The book then discusses mitosis and its investigation by means of the cell biological genetic biochemical and immunological approaches along with the model for mitotic regulation The next chapters examine the manner in which cell structure is involved in the selective expression of genes associated with proliferation and differentiation and how gene expression in response modulates both intracellular nuclear matrix and cytoskeleton and extracellular extracellular matrix architecture The extent to which common signaling mechanisms and regulatory events are operative in the control of proliferation and differentiation is also addressed The book concludes by analyzing the involvement of histone modifications in the condensation of mitotic chromosomes This book is of interest to advanced undergraduate students as well as to graduate students and researchers in genetics cell biology biological chemistry microbiology and immunology
