Poison In The Pot The Legacy Of Lead:

Poison in the Pot Richard P. Wedeen, 2000-05-01 Presents a historical examination of lead poisoning from antiquity through the 20th century and its impact on man's political, social, and medical life. The role of lead as an environmental and social poison reaches far back into the ages, leaving clues for archaeologists, social scientists, and students of art. The chief concern here is with unraveling the effects of lead on the kidneys. Deals with historical as well as contemporary evidence, fantasy as well as fact. Shows that the adulteration of wine with lead was responsible for much of the mythology surrounding gout. Discusses wine mystiques created by poets and philosophers, preachers and satirists. 57 b/w illustrations. **The**

Lead Exposure Herbert L. Needleman, 1991-12-07 Human Lead Exposure consists of scientific reviews and important contributions intended to increase the understanding of the legal, social, and economic forces that have delayed effective prevention of lead toxicity. Chapters discuss the history, both ancient and recent, of lead; explore its neurobiology and toxicology; review the sources and routes to humans; and examine evidence that indicates that lead may affect humans at levels previously thought to be harmless. Neurobiologists, epidemiologists, public health officials, and others concerned about the effects of lead on the human population will find a tremendous amount of useful information in this timely volume.

Brush with Death Christian Warren, 2000 Winner of the Arthur Visel tear Award for Outstanding Book in the History of Public Health from the American Public Health Association. Selected by Choice Magazine as an Outstanding Academic Title. During the twentieth century, lead poisoning killed thousands of workers and children in the United States. Thousands who survived lead poisoning were left physically crippled or were robbed of mental faculties and years of life. In *Brush with Death*, social historian Christian Warren offers the first comprehensive history of lead poisoning in the United States. Focusing on lead paint and leaded gasoline, Warren distinguishes three primary modes of exposure: occupational, pediatric, and environmental. This threefold perspective permits a nuanced exploration of the regulatory mechanisms, medical technologies, and epidemiological tools that arose in response to lead poisoning. Today many children undergo aggressive chelating treatments when their blood lead levels are well below the average blood lead levels found in urban children in the 1950s. Warren links the repeated redefinition of lead poisoning to changing attitudes toward health, safety, and risk. The same changes that transformed the social construction of lead poisoning also transformed medicine and health care, giving rise to modern environmentalism and fundamentally altered jurisprudence. Lead and Public Health Paul Mushak, 2011-08-08 The book presents a detailed assessment of the health science of lead and the human health risk assessment models for lead's human health impacts, followed by an account of various regulatory efforts in the United States and elsewhere to eliminate or reduce human toxic exposures to lead. The science of lead as presented here covers releases of lead into the environment.

lead's movement through the environment to reach humans who are then exposed and the spectrum of toxic effects particularly low level toxic effects on the developing central nervous system of the very young child The section on human health risk assessment deals with quantifying not only the dose response relationships that underlie toxic responses to lead in sensitive populations but also with the likelihood of toxic responses vis vis environmental lead at some level of exposure This section includes a treatment of computer models of lead exposure particularly those that use lead in whole blood as a key measure Various models convert lead intake via various body compartments into measures of body lead burden Such measures are then directly related to severity of injury The final section of the book deals with past and present regulatory efforts to control lead releases into the human environment Current control efforts present a mixed picture The most problematic issue is the continued presence of lead paint in older housing and lead in soils of urban and mining industry communities Comprehensive assessment of the three major facets of the public health problem of lead the voluminous science the risk assessment approaches and approaches to controlling lead as a public health problem Integration of the above three elements to provide a coherent whole Provides a single source of information that will be extremely valuable to all professionals working in areas impacted by this toxic substance
