Ultra-wideband Radar Technology James D. Taylor, 2018-10-03 In 1995 James D Taylor s Introduction to Ultra Wideband Radar Systems introduced engineers to the theory behind a promising new concept for remote sensing Since then the field has undergone enormous growth with new applications realized and more applications conceptualized at a remarkable pace However understanding ultra wideband UWB radar requires a new philosophical approach Concepts such as radar cross section will have new meanings as range resolution becomes smaller than the target Ultra Wideband Radar Technology is a guide to the future of radar by an international team of experts They present the problems solutions and examples of UWB radar remote sensing Chapters discuss the theory and ideas for future systems development and show the potential capabilities The writers present concepts such as the differences between UWB and conventional radars improving over resolved target detection receivers and waveforms micropower systems high power switching and bistatic radar polarimetry Finding comparable information elsewhere might require consulting hundreds of other books technical journals and symposium proceedings Ultra Wideband Radar Technology offers a unique opportunity to explore the theory applications and technology of UWB radar within a single source

Conference Proceedings, 1998 Active Sensors for Local Planning in Mobile Robotics Penelope Probert Smith, 2001

This book describes recent work on active sensors for mobile robots. An active sensor interacts with its surroundings to supply data on demand for a particular function, gathering and abstracting information according to need rather than acting as a generic data gatherer. Details of the physical operation are hidden. The book deals mainly with active range sensors which provide rapid information for local planning, describing extraction of two dimensional features such as lines, corners and cylinders to reconstruct a plan of a building. It is structured according to the physical principles of the sensors, since to a large extent these determine the function of the sensors and the methods of processing. Recent work using sonar, optoelectronic sensors and radar is described. Sections on vision and on sensor management develop the idea of software adaptation for efficient operation in a changing environment. Contents: The Mapping and Localisation Problem; Perception at Millimetre Wavelengths; Advanced Sonar; Principles of Operation and Interpretation; Smooth and Rough Target Modelling; Examples in Mapping and Texture Classification; Sonar Systems: A Biological Perspective; Map Building from Range Data Using Mathematical Morphology; Millimetre Wave Radar for Robotics; Optoelectronic Range Sensors; AMCW LIDAR Range Acquisition; Extracting Lines and Curves from Optoelectronic Range Data; Active Vision for Mobile Robot Navigation; Strategies for Active Sensor Management. Readership: Graduate students and final year undergraduate students in electrical and electronic engineering systems and knowledge robotics, image processing and artificial intelligence.
