Architecture in Motion Robert Kronenburg, 2013-08-15 The idea that architecture can be portable is one that grabs the imagination of both designers and the people who use it perhaps because it so often forecasts a dynamic and creative solution to the complex problems of our contemporary mobile society while at the same time dealing with issues of practicality economy and sustainability *Architecture in Motion* examines the development of portable transportable demountable and temporary architecture from prehistory to the present day From familiar vernacular models such as the tent mobile home and houseboat to ambitious developments in military and construction engineering all aspects of portable building are considered Building on his earlier works *Portable Architecture* and *Houses in Motion* Robert Kronenburg compares traditional forms of building current commercial products and the work of innovative designers and examines key contemporary portable buildings to reveal surprising exciting and imaginative examples He explores the philosophical and technological issues raised by these experimental and futuristic prototypes By understanding the nature of transitory architecture a new ecologically aware design strategy can be developed to prioritise buildings that tread lightly on the earth and still convey the sense of identity and community necessary for an established responsible society This book provides a unique insight into this pivotal field of design

Italy Diane Ghirardo, 2013-02-15 Packed in its dense historic city centers Italy holds some of the most prized architecture and art in the world with which planners and politicians have had to negotiate as they struggle to cope with massive migration from the countryside to the city Early modern architecture coincided with a sustained drive to transform a country that was still primarily rural into a modern industrial state and throughout the twentieth century architects in Italy have attempted to define the role of

architecture within a capitalist economy and under diverse political systems In Italy Modern Architectures in History Diane Yvonne Ghirardo addresses these and other issues in her analysis of the last century of Italy s building practices Specifically she examines the post unification efforts to identify a distinctly Italian architectural language as well as the transformation of the urban environment in Italian cities undergoing industrialization in the late nineteenth and early twentieth centuries She challenges received interpretations of modern architecture and also looks at the subject of illegal building and current responses to ecological challenges In order to illuminate the full scope of the building industry in Italy her examples are drawn not only from the work of widely published architects in the largest cities but from throughout the peninsula including small towns and rural areas Insightful reading for those interested in Italian culture this book offers a new way of understanding the architectural history of modern Italy *Greening the Built Environment* Maf Smith, John Whitelegg, Nick J. Williams, 2013-11-05 This work aims to provide a possible specification of the problems involved in greening the built environment and an articulation of the solutions It begins with a discussion of sustainability as a concept and its applicability to contemporary towns and cities The following chapters take up particular aspects of the built environment and sustainability in greater depth and include the construction industry transport health planning community and equity issues employment and the economy The links between environmental damage poverty and the economy are all themes in this book which also focuses on interconnections and on solutions to these three problems The final chapter explains how the achievement of sustainable development is in the authors opinion dependent on detailed solutions to everyday problems of modern society **Natural Ventilation in Buildings** Francis Allard, 1998 AIOLOS is a computational tool for the calculation of the airflow rates in naturally ventilated buildings
