Lyon,Mariko A. Francombe,Terry A. Hasdell,2012-12-06 Sensory analysis is not new to the food industry but its application as a basic tool in food product development and quality control has not been given the recognition and acceptance it deserves This we believe is largely due to the lack of understanding about what sensory analysis can offer in product research development and marketing and a fear that the discipline is too scientific to be practical To some extent sensory scientists have perpetuated this fear with a failure to recognize the constraints of industry in implementing sensory testing procedures These guidelines are an attempt to redress the balance Of course product tasting is carried out in every food company it may be the morning tasting session by the managing director competitor comparisons by the marketers tasting by a product expert giving a quality opinion comparison of new recipes from the product development kitchen or on line checking during production Most relevant though is that the people responsible for the tasting session should know why the work is being done and fully realize that if it is not done well then the results and conclusions drawn and their implications are likely to be misleading If through the production of these guidelines we have

influenced some people sufficiently for them to re-evaluate what they are doing and why we believe our efforts have been worthwhile

Seed Quality Enhancement: Principles and Practices K. Vanangamudi, G. Sastry, S. Kalaivani, A. Selvakumari, M. Vanangamudi, P. Srimathi, 2010-03-01 Seed is the source of future plants or foods, is the storage place of culture of history, is the first link in the food chain, is the ultimate symbol of food security. Seed is the source of life. Seeds are basic in crop production. No agricultural practice can improve a crop beyond the limits set by the seed. Quality seed is the key for successful agriculture, which demands each and every seed should be readily germinable and produce a vigorous seedling ensuring high yield. Care with the seed and joy with the harvest. Good seed doesn't cost; it always pays. This is the popular adage which enlightens the importance of the quality seed. The farmers are always very much interested in the best seed management practices which are safe, environmentally sound, and scientifically proven technologies. Understandably, in view of the importance of quality seeds in agriculture, both as a product and as a means of establishing a crop, most attention at all levels of investigation has been directed to crop seeds. Since seed is a biological entity, deterioration beyond harvest is inevitable. The consequences of low quality seeds are poor germination, low and delayed emergence, and weak growth leading to poor field stand and ultimately reflecting on reduced yield. Low productivity could be attributed broadly to use of poor quality seeds. At present, to overcome this, several seed enhancement techniques are available for quality upgradation. It has two goals: one is related to seed designing and the other to seed functioning. The rationale for pre-sowing seed enhancement techniques is to mobilize the seed's own resources and to augment them with external resources to get maximum improvement in field stand establishment and yield. To achieve this, several physical, physiological, and biochemical treatments are available at present to give value addition to seeds. Physiological seed treatments that improve seed performance are based primarily on seed hydration and dehydration. Among several non-physiological seed treatments, coating or pelleting can also indirectly improve seed germination, stand establishment, and crop productivity.

Data Quality Jack E. Olson, 2003-01-09 Data Quality: The Accuracy Dimension is about assessing the quality of corporate data and improving its accuracy using the data profiling method. Corporate data is increasingly important as companies continue to find new ways to use it. Likewise, improving the accuracy of data in information systems is fast becoming a major goal as companies realize how much it affects their bottom line. Data profiling is a new technology that supports and enhances the accuracy of databases throughout major IT shops. Jack Olson explains data profiling and shows how it fits into the larger picture of data quality. Provides an accessible, enjoyable introduction to the subject of data accuracy, peppered with real-world anecdotes. Provides a framework for data profiling with a discussion of analytical tools appropriate for assessing data accuracy. Is written by one of the original developers of data profiling technology. Is a must-read for any data management staff, IT management staff, and CIOs of companies with data assets.
