

Media Representation Theory

The term refers to the processes involved as well as to its products. For instance, in relation to the key markers of identity -

Class, Age, Gender and Ethnicity (the 'cage' of identity) -

representation involves not only how identities are represented (or rather constructed) within the text but also how they are constructed in the processes of production and reception.

Representation Theory:

Representation Theory William Fulton, Joe Harris, 2013-12-01 The primary goal of these lectures is to introduce a beginner to the finite dimensional representations of Lie groups and Lie algebras Since this goal is shared by quite a few other books we should explain in this Preface how our approach differs although the potential reader can probably see this better by a quick browse through the book Representation theory is simple to define it is the study of the ways in which a given group may act on vector spaces It is almost certainly unique however among such clearly delineated subjects in the breadth of its interest to mathematicians This is not surprising group actions are ubiquitous in 20th century mathematics and where the object on which a group acts is not a vector space we have learned to replace it by one that is e g a cohomology group tangent space etc As a consequence many mathematicians other than specialists in the field or even those who think they might want to be come in contact with the subject in various ways It is for such people that this text is designed To put it another way we intend this as a book for beginners to learn from and not as a reference This idea essentially determines the choice of material covered here As simple as is the definition of representation theory given above it fragments considerably when we try to get more specific

Categorification and Higher Representation Theory Anna Beliakova, Aaron D. Lauda, 2017-02-21 The emergent mathematical philosophy of categorification is reshaping our view of modern mathematics by uncovering a hidden layer of structure in mathematics revealing richer and more robust structures capable of describing more complex phenomena Categorified representation theory or higher representation theory aims to understand a new level of structure present in representation theory Rather than studying actions of algebras on vector spaces where algebra elements act by linear endomorphisms of the vector space higher representation theory describes the structure present when algebras act on categories with algebra elements acting

Coelho, 2020-04-03 This textbook introduces the representation theory of algebras by focusing on two of its most important aspects the Auslander Reiten theory and the study of the radical of a module category It starts by introducing and describing several characterisations of the radical of a module category then presents the central concepts of irreducible morphisms and almost split sequences before providing the definition of the Auslander Reiten quiver which encodes much of the information on the module category It then turns to the study of endomorphism algebras leading on one hand to the definition of the Auslander algebra and on the other to tilting theory The book ends with selected properties of representation finite algebras which are now the best understood class of algebras Intended for graduate students in representation theory this book is also of interest to any mathematician wanting to learn the fundamentals of this rapidly growing field A graduate course in non commutative or homological algebra which is standard in most universities is a prerequisite for readers of this book
