Representing Direction In Language And Space:

Representing Direction in Language and Space Emile van der Zee, J. M. Slack, 2003 This book considers how it is possible for people to use directions like above the table or over the city How does our brain or any other information processing system represent a direction as a spatial entity And how is it possible to link such a representation to language so that we talk about a direction we have in mind When we look at or imagine a scene what entities can be employed for representing a direction and what are the parts in language that can be used to talk about directions This book brings together research from linguistics psychology philosophy computer science anthropology and neuroscience to answer these intriguing questions By considering direction representation across different languages and in different information processing systems this book gives an overview of the main issues in this area for both the interested novice and the specialized researcher

Syntax and Semantics of Spatial P Anna Asbury, 2008 The category P belongs to a less studied area in theoretical linguistics which has only recently attracted considerable attention This volume brings together pioneering work on adpositions in spatial relations from different theoretical and cross linguistic perspectives The common theme in these contributions is the complex semantic and syntactic structure of PPs Analyses are presented in several different frameworks and approaches including generative syntax optimality theoretic semantics and syntax formal semantics mathematical modeling lexical syntax and pragmatics Among the languages featured in detail are English German Hebrew Igbo Italian Japanese and Persian This volume will be of interest to students and researchers of formal semantics syntax and language typology as well as scholars with a more general interest in spatial cognition

Motion Encoding in Language and Space Mila Dimitrova-Vulchanova, Emile van der Zee, 2013 This book brings together researchers in linguistics computer science psychology and cognitive science to investigate how motion is encoded in language Part I considers the parameters of the field while part II looks at the way in which spatial scale or granularity plays a role in the encoding of motion in language

Functional Features in Language and Space Laura Carlson, Laura Anne Carlson, Emile van der Zee, 2005 The language and space area is a relatively new research area in cognitive science Studying how language and spatial representation are linked in the human brain mainly draws on research in existing disciplines focusing on language perception categorization and development Representative researchers from these sub disciplines of cognitive science discuss new insights in their own field of expertise and show what role their definition of function feature or functional feature plays in their research New research centered around these concepts is on the forefront of developments in these sub disciplines and in the area of Language and Space

Space and Time in Languages and Cultures Luna Filipovi?, Kasia M. Jaszczolt, Katarzyna Jaszczolt, 2012 This volume offers novel insights into linguistic diversity in the domains of spatial and temporal reference searching for uniformity amongst diversity A number of authors discuss expression of dynamic spatial relations cross linguistically in a vast range of typologically different languages such as Bezhta French Hinuq Italian

Japanese Polish Serbian and Spanish among others The contributions on linguistic expression of time all shed new light on pertinent questions regarding this cognitive domain such as the hotly debated relationship between cross linguistic differences in talking about time and universal principles of utterance interpretation modelling temporal inference through aspectual interactions as well as the complexity of the acquisition of tense aspect relations in a second language The topic of space and time in language and culture is also represented from a different point of view in the sister volume Space and Time in Languages and Cultures Language Culture and Cognition HCP 37 which discusses spatial and temporal constructs in human language cognition and culture in order to come closer to a better understanding of the interaction between shared and individual characteristics of language and culture that shape the way people interact with each other and exchange information about the spatio temporal constructs that underlie their cognitive social and linguistic foundations

Space, Time, and the Use of Language Thora Tenbrink, 2008-09-25 Does temporal language depend on spatial language This widespread view is intuitively appealing since spatial and temporal expressions are often similar or identical Also metaphors consistently express temporal phenomena in terms of spatial language pointing to a close semantic and conceptual relationship But what about the application of the two kinds of linguistic expressions in natural discourse The book draws together findings on terms that describe the relation of objects or events to each other such as in front behind before after etc highlighting the relationship between cognition and language usage Using the method of cognitively motivated discourse analysis novel empirical results are presented to complement earlier findings The detailed investigation of a selected range of terms that appear to be parallel in space and time highlights both similarities and fundamental differences in their application As a result a new picture emerges The concepts of space and time are represented in language usage in various systematic ways reflecting how we understand the world and at the same time reflecting how our concepts of space and time differ fundamentally The volume contributes to a debate that has been of interest for cognitive linguists for several decades concerning the understanding of transfer processes between two conceptually intertwined domains The specific contribution of this work consists of addressing the novel question of how such processes come into play in the actual application of relevant expressions in natural discourse By adopting established approaches from Discourse Analysis for issues that are deeply rooted in interdisciplinary research in Cognitive Science insights are drawn together from two hitherto largely unrelated fields of research to approach the topic from an original perspective leading to a deeper understanding of the relationship between the domains of space and time and their expression in language

[The Construal of Spatial Meaning](#) Carita Paradis, Jean Hudson, Ulf Magnusson, 2013-04-25 This book deals with how language users express and understand literal and metaphorical spatial meaning in language and through gesture and pointing The research draws on data from textual investigation using corpora as well as from experiments of various kinds such as psycholinguistic experiments and eye tracking

Cognitive Linguistics and Lexical Change Natalya I. Stolova, 2015-03-27 This monograph offers the first

in depth lexical and semantic analysis of motion verbs in their development from Latin to nine Romance languages Spanish French Italian Portuguese Romanian Catalan Occitan Sardinian and Raeto Romance demonstrating that the patterns of innovation and continuity attested in the data can be accounted for in cognitive linguistic terms At the same time the study illustrates how the insights gained from Latin and Romance historical data have profound implications for the cognitive approaches to language in particular for Leonard Talmy s motion framing typology and George Lakoff and Mark Johnson s conceptual metaphor theory The book should appeal to scholars interested in historical Romance linguistics cognitive linguistics and lexical change

Talking about Motion Luna Filipovi?,2007-12-06 This is a corpus based study of lexicalization of motion events in Serbo Croatian and English with contrasting examples from Spanish French Italian Mandarin Chinese and Albanian Talmy s typology 1985 provides the backdrop for the analysis and the focus is on intratypological differences that affect habitual presence or absence of information in motion expressions crosslinguistically as well as pattern clashing in translation This fresh look at issues regarding linguistic typology lexical and construction meaning and spatio temporal construals in language and experience results in a more finely grained classification of verbalized motion events The study offers an eclectic overview of different theoretical approaches and insists on theoretically unbiased set of tools and principles that can be used in studies of any cognitive domain in any language It provides an in depth discussion of current issues in cognitive linguistics in particular and suggests systematic implementation of the research findings in applied and interdisciplinary studies of language

Semblance and Signification Pascal Michelucci,Olga Fischer,Christina Ljungberg,2011-11-23 The articles assembled in *Semblance and Signification* explore linguistic and literary structures from a range of theoretical perspectives with a view to understanding the extent prevalence productivity and limitations of iconically grounded forms of semiosis With the complementary examination of large theoretical issues extensive corpus analysis in several modern languages such as Italian Japanese Sign Language and English and applied close studies across a range of artistic media this volume brings a fresh understanding of the cognitive underpinnings of iconicity If primary and secondary modelling systems are rarely studied in tandem it is clear from this volume that their fruitful juxtaposition yields striking insight into the cognitive concerns that pervade current semiotic research
