Representing the Environment John Robert Gold, 2004 An introductory guide to the representations of the environment found in everyday life in nature culture landscape art and in the media These provide an important means of understanding environmental attitudes and decision making

Representing, Modeling, and Visualizing the Natural Environment Nick Mount, Gemma Harvey, Paul Aplin, Gary Priestnall, 2008-12-22 The explosion of public interest in the natural environment can to a large extent be attributed to greater public awareness of the impacts of global warming and climate change This has led to increased research interest and funding directed at studies of issues affecting sensitive natural environments Not surprisingly much of this work has re

Radical Embodied Cognitive Science Anthony Chemero, 2011-08-19 A proposal for a new way to do cognitive science argues that cognition should be described in terms of agent environment dynamics rather than computation and representation While philosophers of mind have been arguing over the status of mental representations in cognitive science cognitive scientists have been quietly engaged in studying perception action and cognition without explaining them in terms of mental representation In this book Anthony Chemero describes this nonrepresentational approach which he terms radical embodied cognitive science puts it in historical and conceptual context and applies it to traditional problems in the philosophy of mind Radical embodied cognitive science is a direct descendant of the American naturalist psychology of William James and John Dewey and follows them in viewing perception and cognition to be understandable only in terms of action in the environment Chemero argues that cognition should be described in terms of agent environment dynamics rather than in terms of computation and representation After outlining this orientation to cognition Chemero proposes a methodology dynamical systems theory which would explain things dynamically and without reference to representation He also advances a background theory Gibsonian ecological psychology shored up and clarified Chemero then looks at some traditional philosophical problems reductionism epistemological skepticism metaphysical realism consciousness through the lens of radical embodied cognitive science and concludes that the comparative ease with which it resolves these problems combined with its empirical promise makes this approach to cognitive science a rewarding one Jerry Fodor is my favorite philosopher Chemero writes in his preface adding I think that Jerry Fodor is wrong about nearly everything With this book Chemero explains nonrepresentational dynamical ecological cognitive science as clearly and as rigorously as Jerry Fodor explained computational cognitive science in his classic work *The Language of Thought*

Committee on Science, Space, and Technology,1992 **A Tale of Two Cities: A Comparison of Air Pollution Governance in the Los Angeles Area of the USA and the Beijing-Tianjin-Hebei Area of China** Xi Wang,Richard Ottinger,2023-12-11 The successful reduction of urban air pollution is among the notable achievements of modern environmental law and policy This remarkable study focusing on two of the

world's most prominent cases explores how people in the areas of Los Angeles and Beijing Tianjin Hebei BTH established governance processes to combat air pollution and how the major actors in each area worked to make their region a better place to live. Employing the expertise of teams of knowledgeable environmental law experts from both China and the United States, the authors identify and analyze similarities and differences in the respective legal and policy experiences as actors succeeded in greatly improving the air quality of their areas. Underpinned by a model of environmental governance developed by the authors and presenting an abundance of first-hand information from both areas, the study finds that despite broad political and cultural differences in both regions, three political relations in governance processes emerge as enablers of effective reduction of air pollution: relation between regulators and the regulated communities, relation between all the supervisory political entities such as legislatures etc. and regulators, and relation between civil society including news media and nongovernmental organizations and polluters. Specific areas of regulation covered include transportation, ports, energy efficiency, utilities, oil refineries, building efficiency, renewable energy, coal dependency, and optimizing energy structure. With its sound, replicable model, its solid findings, and its enlightening conclusions, this incomparable work will prove of immeasurable value to administrative authorities and counsel worldwide engaged in combating air pollution. Moreover, its creative methodology is a signal contribution to the comparative study of environmental law and policy.

Adjudicating Climate Change William C. G. Burns, Hari M. Osofsky, 2009-07-27 Courts have emerged as a crucial battleground in efforts to regulate climate change Over the past several years tribunals at every level of government around the world have seen claims regarding greenhouse gas emissions and impacts These cases rely on diverse legal theories but all focus on government regulation of climate change or the actions of major corporate emitters This book explores climate actions in state and national courts as well as international tribunals in order to explain their regulatory significance It demonstrates the role that these cases play in broader debates over climate policy and argues that they serve as an important force in pressuring governments and emitters to address this crucial problem As law firms and public interest organizations increasingly develop climate practice areas the book serves as a crucial resource for practitioners policymakers and academics *The Political Ecology of Climate Change Adaptation* Marcus Taylor, 2014-11-17 This book provides the first systematic critique of the concept of climate change adaptation within the field of international development Drawing on a reworked political ecology framework it argues that climate is not something out there that we adapt to Instead it is part of the social and biophysical forces through which our lived environments are actively yet unevenly produced From this original foundation the book challenges us to rethink the concepts of climate change vulnerability resilience and adaptive capacity in transformed ways With case studies drawn from Pakistan India and Mongolia it demonstrates concretely how climatic change emerges as a dynamic force in the ongoing transformation of contested rural landscapes In crafting this synthesis the book recalibrates the frameworks we use to envisage climatic change in the context of contemporary debates over development livelihoods and poverty With its unique theoretical contribution and case study
