Repression and Dissociation Jerome L. Singer, 1995-06 This book features contributions from twenty six leading experts that survey the theoretical historical methodological empirical and clinical aspects of repression and the repressive personality style from both psychoanalytic and cognitive psychological perspectives Rarely does a volume present contributions on a controversial topic from such distinguished clinicians and experimentalists There is something of interest in this volume for almost anyone involved in experimental cognitive psychology and psychiatry Carroll E Izard Contemporary Psychology The concept of repression is the cornerstone of psychoanalytic theory This is a delightful book unusually well written Recommended Choice Readable thorough wide ranging and consistently interesting A testament to the continuing power of psychodynamic ideas when faced with individual psychopathology Sue Llewelyn Psychologist Singer has brought together some of the best empirical research in the areas of unconscious mental activity and repression that is at once interdisciplinary and scholarly Howard D Lerner International Review of Psycho analysis A rich reference replete with summaries and citations covering a variety of topics related to the psychology of repression and dissociation A thoughtful detailed and eclectic discussion of the scientific and theoretical basis of repression and dissociation Steven Lazrove M D American Journal of Psychiatry

Cognitive Science and the Unconscious Dan J. Stein, 1997 Can a worthwhile exchange be set up between the seemingly opposing viewpoints of psychoanalytic therapy and cognitive science Stein and the other contributing authors of Cognitive Science and the Unconscious say yes In fact it is their contention that such an interchange of theory and method combining the theoretical clarity and empirical rigor of cognitive science with the richness and complexity of clinical work holds the promise of enriching both disciplines The concept of unconsciousness as variously conceived by psychoanalysis The Unconscious and cognitive science unconscious processing is the reference point of this dialogue Written by a distinguished group of researchers and clinicians this volume examines those aspects of the unconscious mind most relevant to the psychiatric practitioner including unconscious processing of affective and traumatic experience unconscious mechanisms in dissociative states and disorders and cognitive approaches to dreaming and repression Although cognitive psychology forms the backbone of the book many of the chapters illuminate relevant work from the fields of artificial intelligence linguistics and biology

Cognitive Interference Irwin G. Sarason, Gregory R. Pierce, Barbara R. Sarason, 2014-06-03 In this volume the first synthesis of work on cognitive interference leading researchers theorists and clinicians from around the world confront a number of important questions about intrusive thoughts and suggest a challenging agenda for the future

Textbook of Hospital Psychiatry Steven S. Sharfstein, 2009-02-20 With decreases in lengths of hospital stay and increases in alternatives to inpatient treatments the field of hospital psychiatry has changed dramatically over the past 20 years As the first comprehensive guide to be published in more than a decade the Textbook of Hospital Psychiatry is a compilation of the latest trends issues and developments in the field The textbook

written by 70 national experts and clinical specialists covers a wide range of clinical and administrative topics that are central to today's practice of hospital psychiatry. This is the only textbook on the market today that provides information for psychiatric hospital clinicians and administrators in a single all-inclusive volume. It covers information not generally available in other textbooks and medical journals touching on a variety of cutting-edge issues such as safety improvement, use of seclusion and restraint, suicide prevention, and culturally competent psychiatric care. The book's 35 chapters are divided into four parts. Part I, Inpatient Practice, focuses on specialty psychiatric units, e.g., acute stabilization unit, eating disorders unit, forensic unit, child unit, including the many psychopharmacological and psychosocial treatments used within each. This section also touches on specialized treatment for patients with co-occurring problems such as substance abuse, developmental disabilities, and legal difficulties. Part II, Special Clinical Issues, covers clinical issues from the perspective of different populations: consumers, families, suicidal patients. This section also examines the recent trend toward patient-centered care. Part III, The Continuum of Care, addresses psychiatric services within the community such as rehabilitation programs, day hospitals, and emergency services. It discusses the importance of understanding hospital-based treatment within the broader perspective of patients' lives. Part IV, Structure and Infrastructure, focuses on such often-overlooked topics as financing of care, risk management, electronic medical records, and the actual architecture of psychiatric hospitals, as well as the roles of psychiatric hospital administrators, psychiatric nurses, and psychiatrists and psychologists. An invaluable resource for both clinicians and administrators as well as a comprehensive teaching tool for residents, the *Textbook of Hospital Psychiatry* is a must-have for all professionals who work in psychiatric settings.

The Concept of Defense Mechanisms in

Contemporary Psychology Uwe Hentschel, Gudmund J.W. Smith, Wolfram Ehlers, Juris G. Draguns, 2012-12-06. What is the scientific status and the truth value of the concept of defense mechanisms? Among contemporary psychologists, three types of answers to this question may be expected. Some would wholeheartedly endorse the theoretical, clinical, and research value of this notion; others would reject it outright. Between these two extremes, a large number of observers, perhaps the majority, would suspend their judgment. Their attitude, compounded of hope and doubt, would capitalize on defense as an interesting and promising concept. At the same time, these psychologists would express skepticism and disappointment over its clinical limitations, theoretical ambiguity, and research failures. The present volume is primarily addressed to the audience of hopeful skeptics: those who have not given up on the notion of defense yet have been frustrated by the difficulties of incorporating it into the modern streamlined structure of psychology. To this end, we have brought together theoretical and empirical contributions germane to defense together with reports about their applications to clinical and personality assessment, especially in relation to psychopathology, psychosomatics, and psychotherapeutic intervention.

Adult Crying Ad J.J.M. Vingerhoets, Randolph R. Cornelius, 2012-12-06. Crying is a typical human expression of emotion. Surprisingly, until now, little scientific attention has been devoted to this phenomenon. Many textbooks on emotion fail to pay attention to it, and in

scientific journals there are hardly any contributions focusing on this behavior In contrast there is much interest from the lay public allowing pseudo scientists to formulate theories that have little or no scientific basis Is there any evidence in support of statements that crying is healthy or that not crying may result in toxification How do people react to the crying of others Is crying important for the diagnosis of depression and if so how This book aims to fill this gap in scientific literature Crying is discussed from several perspectives and specific attention is given to methodological issues and assessment Each chapter provides a review and a summary of the relevant scientific literature

field **Assessing Well-Being** Ed Diener, 2009-06-04 The Sandvik Diener and Seidlitz 1993 paper is another that has received widespread attention because it documented the fact that self report well being scales correlate with a number of other methods of measuring the same concepts such as with reports by knowledgeable informants family and friends experience sampling measurement and the memory for good versus bad life events A single factor was found to underlie measures using different methods and a number of different well being self report measures were found to correlate with the non self report measures Thus although the self report measures of well being are imperfect and can be influenced by response artifacts they have substantial validity as shown by their correlations with measurements based on alternative methods Whereas the Pavot and Diener article reviewed the Satisfaction with Life Scale the Lucas Diener and Larsen 2003 paper reviews various approaches to assessing positive emotions As we wrote in the chapter in this volume in which we present new measures we do not consider any of the existing measures of positive affect to be entirely acceptable for measuring subjective well being in the affect area and that is why we have created and validated a new measure **Counselling Adult Survivors of Child Sexual Abuse** Christiane Sanderson, 2006-06-15 This updated and expanded edition provides comprehensive coverage of the theory and practice of counselling survivors of child sexual abuse CSA In a reasoned and thoughtful approach this book honestly addresses the complex issues in this important area of work providing practical strategies valuable and new insights for counsellors **The Psychology of Secrets** Anita E.
