Reproduction To Birth Projects With Biology:

The Art of Teaching Science Jack Hassard, Michael Dias, 2013-07-04 The Art of Teaching Science emphasizes a humanistic experiential and constructivist approach to teaching and learning and integrates a wide variety of pedagogical tools. Becoming a science teacher is a creative process and this innovative textbook encourages students to construct ideas about science teaching through their interactions with peers, mentors and instructors and through hands-on minds-on activities designed to foster a collaborative thoughtful learning environment. This second edition retains key features such as inquiry-based activities and case studies throughout while simultaneously adding new material on the impact of standardized testing on inquiry-based science and explicit links to science teaching standards. Also included are expanded resources like a comprehensive website, a streamlined format and updated content making the experiential tools in the book even more useful for both pre and in-service science teachers. **Special Features** Each chapter is organized into two sections: one that focuses on content and theme and one that contains a variety of strategies for extending chapter concepts outside the classroom. **Case studies** open each chapter to highlight real-world scenarios and to connect theory to teaching practice. **Contains 33 Inquiry Activities** that provide opportunities to explore the dimensions of science teaching and increase professional expertise. **Problems and Extensions** On the Web Resources and Readings guide students to further critical investigation of important concepts and topics. An extensive companion website includes even more student and instructor resources such as interviews with practicing science teachers, articles from the literature, chapter PowerPoint slides, syllabus helpers, additional case studies, activities and more. Birth controlled Amrita Pande, 2022-06-14 *Birth controlled* analyses the world of selective reproduction, the politics of who gets to legitimately reproduce the future through a cross-cultural analysis of three modes of controlling birth: contraception, reproductive violence and repro-genetic technologies. It argues that as fertility rates decline worldwide, the fervour to control fertility and fertile bodies does not dissipate; what evolves is the preferred mode of control. Although new technologies like those that assist conception or allow genetic selection may appear to be an antithesis of other violent versions of population control, this book demonstrates that both are part of the same continuum. All population control policies target and vilify women, Black women in particular, and coerce them into subjecting their bodies to state and medical surveillance. *Birth controlled* argues that assisted reproductive technologies and repro-genetic technologies employ a similar and stratified burden of blame and responsibility based on gender, race, class and caste. To empirically and historically ground the analysis, the book includes contributions from two postcolonial nations, South Africa and India, examining interactions between the history of colonialism and the economics of neoliberal markets and their influence on the technologies and politics of selective reproduction. The book provides a critical interdisciplinary and cutting-edge dialogue around the interconnected issues that shape reproductive politics in an ostensibly post-population control era. The contributions draw on

a breadth of disciplines ranging from gender studies sociology medical anthropology politics and science and technology studies to theology public health and epidemiology facilitating an interdisciplinary dialogue around the interconnected modes of controlling birth and practices of neo eugenics Research Grants Index National Institutes of Health (U.S.).
